# UNIVERSAL KNOWLEDGE FOR THE PEOPLE 

## CHIVASSO-CUIAMYPILORUS.

CIIIYNSSO, a small city of Picdmont, Northern 1taly, situated in a fertile pain on the left lank of the Io, about 15 miles north-east of Turin. It was fumerly a place of considerable military injertance, lout its fortifications were destroyed in 1804 hy the French. The lampeys of C. are celebrated throughout Piedmont. It has mavufactures of bricks, rarthenware, soap, \&c., and a trade in the agricultural proluce of the district. Pop, alont sefor.

CIIVE, or ClV̌E (Alliam schemipmasum), a plant of the same genus with the leek and ourom (see Alifus), a peremaial, 1 fout in height, with very small, flat, chestercil hullus, increasing hy its hullss so as to form a sort of turf. The leaves are tubular, cylindrical-tajerias, radical, nearly as long as the almost leafless flowering-stem, which is terminated by a hemispherical, many ilowered, nut loulhiferons umbel of bush real, or, more rardy, flest-coloured flowers. The stamens are inclutal within the perianth. This rather pretty little plant grows wild on the banks of rivers, and in marshy or occasionally floodel places in the midme latitudes of Europe and Asia. It is a rare native of Britain. In some of the mountainnus districts of Eurom a variety is found, larger and stronger in all its parts, and with flowering-stems more leafy. Chives-the name is gencrally usel in the piural-are commonly cultivated in kitehen-gar:lens, often as an edging for phots, and are need for flavourine somps and dishes. Their properties are very similar to those of the minn. The part isel is the yomg loaves, Whel hear repeated cuttings in the season.

CHIZEROTS AND BURINA form one of those peculiar races in France that live isolated in the midst of the rest of the population, and are despised and hated hy their neighbours. Thuy live in the arrondissement of Bourg-en-Bresse, in the department of Aill; aul the commanes of sermoyer, Arbigny, Boz, and Ozan belong to them. According to tradition, they are descenden from the Saracens. Although industrious and prosperons,
they are helid in the ntimost contemp, and oletest. ation by their peasant neighbours, who arw wften indolent and elestitute. They are lonked mon as covetons and malicions, and scarcely would the daughtor of a small farmer, or well-to-do day* labourer, hecome the wife of one of them, so that they mostly mary amone themselves. From time immonorial, the $G$ and 1: have been field-lalwhers, eattle-dealers, matchers, \&c. Dany of then are very goot-lowking. 'The young women are handsunke, cluar-complexionet, with large lack (eges. tee Michol, Ifistoive dis limos Mamites te le Fronce et de l'Esputphe (2 vols. I'ar. 18tō).

Chlallni, Eiexst Flonexs Finenmemi, fimuler of the science of acoustics, wats hom at Witteminare, Nowember 30, Fioni. Ife stadied law in his native phace, and also in leipsic, where, in 15:32, he was made Ductor of Laws. C. ultimately almandmen juridical stulies altonether, derotal his miml to natural science, amb, beincs aermainterl with masia. was lul to ohserve that the Iaws of sumd wew hy no means so well estaldishel ins thane of other branches of physics. He therefore lugan to aprely lis knowledge of mathematics and physics to aconsties, anl travelled for ten years (altor 1502) throurgh Germany, Hollami, France, Italy, Ihssia, and Denmark, giving lectures on the subject. whill wore wery sucecsful. Ife dima in Itesian, April : $B$,
 the Theory of Simind ( 175 ), Aconstics ( 1.802 ) , Finn ('ontributions to Aconstix: (1517), and romtriturtens. (1) Pratient Acrunsice, with lemanks on the moking of Instrmments ( 1822 ). $\therefore$. also wrote setreral "esays on meterric stones.
 chltmps, it snlitier's cloak), al fery remarkable genus of mammalia of the order Eidentata, rankel ly naturalists in the same family with the armallllas, hat diflering in important respects from them, and from all other known tuadrupeds. Only me sluciew is known, C. truncatus, fire or six inches lones, a

## CHLOFICKI-CHLORIMETRY.

native of the interior of Chili, living whiergromed like the mok, which it much resembles in its halits, and feeding on the same kind of fool. Its fore-feet are alapted for digging, although in a different manner from those of the mole. The skull is destitute of sutwes; there are resemblances to the

nstealogy of birds in the ribs and their nnion to the sternum ; the himler part of the body is altogether mulike that of any other known animal, in its terminating quite aloruptly, as if cut off almost where its thickness is areatest, or as if the back were suldmy bent fown at right angles, the tail oot springing from where the line of the back appears to terminate, but far below. The whole uypr anl hminer parts of the body are covered with a coat of mail, made up of a series of square plates; the under parts and lecs are covered With long silky hair. The tail is very peculiar ; it is cosered with small scales, is expranded at the tip, and is nstally incurved along the belly, but is furnisherl with such muscles as to surgest the probalifity of its heing omployed to thow back the eartl in excavations.

CHLOPICKI, doserit, a Polish general, and Dictator of loland durins the revolution of $18: 0$, was lumu in Galicin in 15:2. Ile entered the army in 175 , attracteal the notice of Fosciusko during the first insurrection of the Poles, and after the stoming of l'raga, !th Nowmer 179, when the hupes of the patriots were extingushed for awhile, he passed into the service of the new ('isalpine Republic, and distinguished himseif in various battles. In 1806 when Bonaparte calleri the Poles to arms, ( $\therefore$ anong others. oheyed, and foucht gallintly at Eylan and Friedland. Ile was sulbsequently sent Wy the emperor into Spain, and in 1812 followed him to linssia, taking part in the blooly engagements at Snollonsk ami Moskwa. After the relies of the invaling force hall returned, $C$. left the imperial sarvice, ou account of receiving certain slights in the way of his $\mathrm{p}^{\text {rofessional advancement. After }}$ the takine of I'aris by the allies in 1s11, he led bak t. lowand the remanis of the Polish tron's whe had fontht undre bonaparte, and was well received by the Papherr Alexander, whomade him a general of divisim. When the seand insurection of the Pakes bols, wot in 1830 , C, , who foresay the lopeloss natur" of the attempt, concealed himself; hut the wisa of the ration calle haim forth from his hiding-ilun, amb on tha 5th December 1830, he was - Inctol sictater. His moderate views, however, involvel him in lispotes with the extreme patrintic party, aml on the 2301 dimmary 1831, he resirgul his ofluen but, to fonw his sincerity, he entured the Folish army as :a simple soliner, and took part in the marlarons lateleas at $W$ arve amb Crochow. After the suluression of the insurrection, $C$. went to

Cracow, and withdrew altogether from public life. He died at Krzeschowitz, 30th September 1854.

CHLORAL ( $\mathrm{C}_{4} \mathrm{Cl}_{3} \mathrm{HO}_{2}$ ) is a bouly furmed when anhydrous alcohol is acted upon by dry ehlorine gas. It is an oily liquid with a p"culiar penetrating odour.

CHLORANTHACER, a matural orler of exugenons plants, closely allied to the peppers ; herbaceus and half-shrubly mants, with jointed stems, opposite simple leaves, and mimite stipules between them. 'The Howers are in terminal spilies, and are destitute of calyx and corclla, but have each a small seale or bract. The stamens are lateral ; either only one or few, and partly cohering. The ovary is one-celled, immediately crowned with the stigma; the orule is pendulous; the fruit a drupe or one-sceded berry ; the embryo maked, not in a fleshy sac as in the peppers. - The number of known species is small: all of them are tropical, or matives of China and Japan. They are generally aromatic, nud some of them, as species of Chlorenthus in the East Indies, and of Mrelyosmum in the West Indies and Sonth America, are used as antispasmodics, stimulants, stomachics, and tomics. The roots of Chlorunthas aficinetis and C. bractystechys have been ranked among the most efficacions remedies in fevers and other diseases rergiring contimual and active stimulants, and instances have occurred of great benefit from their employment during the prevalence of epilemics in Javat. C. inconspirtus is the Chu-Lan of the Chinese; its leaves, spikes of flowers, and berries are usel by them for imparting a peculiar fragrance to tea. All the teas which have what is called the conslip flarour owe it to this plant.

CHLO'LIC ACID ( $\mathrm{ClO}_{\bar{\circ}}$ ) is a componend of one atom of chlorine and five atoms of oxygen, and is generally met with in combination with potash, as the white crystalline salt, chlorate of potash ( $\mathrm{KO}, \mathrm{ClO}_{5}$ ). This salt is mainly interesting from the readiness with which it parts with its oxygen to combustibles, as when thrown on red-hot charcoal, when it causes violent deflagration. The salt is employed in the fabrication of certain kinds of lucifermatches, which give a slight explosion when struck. If a crystal of chlorate of potash be placed un a piece of preer saturated with turpentine, and a drop or two of oil of vitriol added, it canses the intlaming of the turpentine with explosire rapility. The chlorate of potash is also used in medicine, with the view of mprarting oxygen to the bloort.
CHLORIMETRY, or CHLOROMETJI, is the process of estimating the proportion of a arilable chlorine in bleaching 1 owder ( $1 \mathrm{l} . \mathrm{r}$ ), which may vary from 20 to 36 per cent. The process depends upon the great power with which chlorine, in the act of being liberated from its compomme, causes the oxidation of many sulstances. The salt gencrally used is pure crystallised sulphate of iron, whicls, in its ordinary state, gives a decp blue colour, with a drop of ferrideyande of potassium, lut ceases to do so when it has licen fully oxidised, or converted from a protiosalt into a per-salt, through the inthence of chbrine. It leing known that 78 grains or parts of sulphate of iron are oxiclised hy 10 grains or parts of ehborine, the mode of 1 woceluro in $(2$, is as follows: 78 grame of fino crystals of the sulphate of irm are clissolved in water slightly acidulatend with hyirochloric acid in a white porcelain basim. A given quantity of the lleaching powder - sity 50 grains is dissolved in a little tophe water, and introduced into a tall measure-glass callen a chlorimeter or lurette (figs. I, 2 , aud 3), similar to an alkalimeter, which is divided
into 100 parts, and water addod till the solution rises to the toll mark. After subsidine of the

Burettes. insoluble matter, the" char suhtion is very gralnally pured into the simation of sulphate of irme in the hasin, the: whole being kept comstantly stared, and pery now :and :wain : "fop of the iron solution is. taken out and plamed on a new drop of ferrideyanide of potassian placel on a white platw ; aml whenever the iron solution crases tu promence a derp blue, and only forms it light eremish-yellow tint, it is known that the in m has been fully oxilised by the chomine. sumpise that at this stage the hurette has been cmptiond to the 55th division; as we know that the liguid poured out must have contained 10 grains of chlorime, we can calculate the chlorine contained in the whole; for

5es: $10:$ : $100: 18 \cdot 15$.
Thus 50 grains of the powder contain 18.18 grains of chlorine, or $36 \% 36$ per cent. Irotochloride of manganese, subehloride of mercury (calomel), or a solution of indigo of known strencth, may be employed insteal of the sulphate of iron; but the latter is preferable, and is generally employed by chemists and manufacturers.

CILLOTRINE (Gr. chtorros, pale green) is a nonmetallic element discovered by scheele in 1774 , and named by him dephlogisticated marine air. Afterwards, in 1810, Davy proved it to be an clementary booly, and gave it the name which it now bears. In nature it is always foumd in a state of combination. United with sodinm (Na), it weours very largely as the chloride of solium (NaCl)-common salt-in the ocean; in large beds, as rock-salt; in all natural waters, including even rain-water; in ciays, soils, limestone; in voleanic incrustations; and in the vegetalle and animal lingdums. The preparation of gascons C. Wy its liberation, directly or indirectly, from common salt, has been fully described under Bleaching Powifre, which is the form in which C. is prepared and employed commercially. For experimental purposes, the ras may be received in jars filled with water at the ponenmatie trongh, when the C. rises inta the jar, ami displaces the water. When thus outained, it is a ycllowish-green gas with a peculiar and suffocating odour, is not commstible, and a very feelle supporter of ordinary combustion. A lighted candle placed in it borns with a very smoky flame, owing to the hydrogen of the oil alone lyuning, and the carbon heing liberated. Several of the metals, snch as antimony, copper, and arsenic, in a tine state of division, or in the condition of thin leaves, at once become red hot, and burn when introduced into the gas. A piece of thim paper suaked in turpentive likewise bursts intn tlame. C. has the symbol Cl , and the atomic weight or equivalent of :-5.5. It is a very heavy gas, nearly $2!$ times heavier than air, its specific gravity being $2470($ air $=1000)$; it is suluble in cold water to the extent of two volumes of C . in one of water, and yields a solution resembling the gas in colour, odour, and other 1 roperties. The principal properties of C . are those of a bleacher of cotton and linen (sce Bleaching), and a most
powerful disinfontant (q.v.). The gas can bo ron-
 dark preemish-y.dlow hamplel liquid, with a spereiti:

(1. mites with the motals and many other sul). stances to form an extensive class of salts known as chlorides.

CIILO'RITE (GI: Ghoros, grener), an abment mincral, consistim! of silica, alumina, matnesia, and protoxide of irm, in somewhat variahle promertions. It is of a green coluur, ravely oceurs crystallised in hexagomal crystals, sometimes foliaterl like talc. It is rather soft, and is asily loroken or seratehed with a knife lafore the blowpipe, it is with difhenty fased on thin elloes. It is readily distinguishel from tale by yielding water in a clusul tube.

CILOOTITE-SCIIST, or CIHAOHITE-SLATE, a green slaty ruck, in which chlonito is almulant in foliated plates, nsually himien with minnte grains of quartz, and sometimes with felspar or mica. It belongs to the metanomphic rucks. and is often found graduating into gneiss and clay-slate.

CHLOTOFORM, or the TERCHLOMLDE OE FORMILE ( $\mathrm{C}_{2} \mathrm{HCl} l_{3}$ ), was oriminally disconcred by Subleiran, and experimented upon loy Imons, and was long knom only to scientific chemists as a rare organc body, $l^{m s s e s s i n g ~ i n t e r e s t ~ f r o m ~ b r i n e ~}$ one of a seri+s of arranie substances. but mot known to possess any pumerties likely to call it into use, ur even likely to lut it lue known by name to the gencral pullic. The remarkahe jower, however, which it possesses of pronlaciner anorsthesia, has led tor the promation of $C$. on a very extensive. scale. The materials cmphord are alcohol, water, and bleaching powder, and the proportions are four parts of Ileaching powder, to which sulficient water is added to malie in thim paste, ami thereafter one part of epirits of wine; the whole is introducel into a capacions retort. which must not be more than half filled, and beat being applied, the C., accompasied by water and a little alcoind, distils over. As the (\% is heavier than water, and is not readily miscible therewith, two layers of liquil are obtained in the receiver-the upmer being water and alenhon, and the lower beinc chloroform. The upher liquid being cautimsly Imurel off, the $r$. is agitated with fused carimate of potash, which abstracts the remaining iraces of water, and on subsecumat redistillation the C . is obtained pure and ready fur use.
$\therefore$ is a highly limpid, mohile, colomless liquid, which is very vilatile, has a characteristic and pleasant odour, and an agreeable sweetish taste. It has a sleceitic gravity of nearly Iovo (water = Ino0), lueing thus half as lreary again as water, aml hoils at $140^{\circ} \mathrm{F}$. It is not inflanmable in the ordinary sense of the term, as it will not take fire
when a light is hought down upon it; lout when thrown on reahot eonls, it hurns with a green flame, evolving mueh smoke. It is slichtly soluble in water, but more readily mixes with alcohol and 1.ther. It dissolves camphor, amber, cupal, and nther resins, wax, canutchoue, hack and red sealang wax, intine amb bromine, as well as strychmine amd wher alkaloids. Its pmity may be determined by placing some on the fram of the haml, and allowing it to evaporate, when no alcoholic WH other odoroms substance should be aven momentarily recognised; an! ly agitation with oil of vitriol, when, on settling, the $C$ shouk reatily swim on the surface of the vitriol, and the twa layers of licuid remain colombess. The employment of $($ O as an antesthetie has alrealy been considered moder Anesthesta; but it may lie hore repeaten, that C. is a suhstamee that eamot be too cautionsly dealt with, amil that it should never be alministercil except in the presence and ly the sanction of a medical practitioner. Whan skilfully given, it is the safest of all anasthetics, and the greatest hoon that chemistry has bustowed on sulferiug humanity.

CHLOROPHYLL (fir, chtorwe, Erem. and phylom, a leaf), the sulstance to which the leares and other parts of flants we their recon colour. It is somewhat amalogus to wax, is suluble in alcohol and ether, but insoluble in water, and Hoats in the fluid of the cells, in the form of minute sranules. Light is indispensable to its formation, and hence arises the familiar phenomenon of llanchinin (i, v.), either from accidental canses, or by the art of the eradener. Vome leaves do not exhibit so deep a zreen as those which have been longer esposed to the light; ami the green of a leaf generally deepens till it begins to change into the tints of autumn. Hydra cirilis, and other mimute animals. appar to owe their creen chlour to a substance aralogens to chlorophyl.

## CHLOROPS. Sce Cons-Fily and Wheat-Fhi:

CHLOROSIS (Gr. dhomes, pale exeen), a peenliar form of anamia or hoodlessncer, cummon in young women, and connectul with the disorders incilant to the critical prion of lifi: It has been ealled the arcen sichness, from the peculiar dingy reenish-yellow the of the complexion; the creen colour, however, is not always characteristic. The disease is attended with very great delility, and often with hreath. lessness, palpitation, and wether distressing, or even alarming symptoms. When there is me organic disease present, however, ( 1 . may lo phonncet curalle in a large proportion of cases. The primcipal means to le employed are air exorcise, often salt-water bathe, the nse of iron, with a mutritions ame rather stimulating lliet, and purgatives if required; together with such special remedies as are nlapted for restoring deficient secretions, and bringine the entire femate system of orrans into a natural enoulition.

- HILORO'sis.a disensed state of phanta, in which a silly eren or trenish-yellow colur takes the face if the matural lively hue. Sometimes only a purtionlar shont is affected ly it, lint very gencrilly the whole plant: and it sems tu wemer ung canses which rember the plant alto the: pallin apmarane lomg merily symptomatic, and not whly the furmation of chlormplayl, hat all the funthuls of westabha hete heing languidly and 1mperfectly carriod out bat send, damp soil, and wald wet wather, appere th be the nut commen -anses of chownits F'ants affectel by this disease
 but while crops of :rain, potateres, \&e., sometimes
perish from it, or are much diminished in value. Fruit-trees also suffer from it.

CHOCAR1), (1) CHOQUARD (Fyrhororar), a genus of linds of the Crow fanily (forvide), differing from the Choughs in having a shorter hill, which, however, is arched like theiss, but resembling them in their habits. The only European species is the Apine Co.. also called Alpine Chongh, and Alpin" Cruw ( $P$. Pymbocorax). It is about the size of a jackdaw, of a brilliant black, with yellowish bill and red foct.

CHOCKS are lieces of wond employed m ship-board to aid in the sulphert of various articles. Amongst them are anchor-ehneks, muler-chneks, hoat-chocks, stow-wool chocks, anll choeks to suphert the emls of the beans.

Clloco, a bay and province of New Granada, in South America-1. The hay, forming part of the Gulf of Daricn, receives the itrato (f. v.), a stream of mote in connection with inter-oceanic commumication. Its lat, and longe are about $3^{\circ} 30^{\prime} \mathrm{N}$., and $77^{\circ} 30^{\prime}$ W. - $\because$ The province forms the west portion of the department of Cauca (q. v.).

CHOCOLATL is made from the seeds of Thenhioner Crecuo (see Cocos), rembed to a fine paste in a heatal inom mortar, or hy a machine, and mixed with pramidel sucar and spices, as cinnamon, cloves, cardimom, vanila, \&e. The paste is then poured intormonts of white iron, in which it is allowed to cool and harilen. ' 6 ' is sometimes made withont spices, lont is then more menerally called Cocua. The prste is sometimes mixed with flour, and with Carageen or with Iceland Moss; and for medicinal purposes with cmechona, \&c. C. is used as a heverage, anil for this purpse is dissolved in hut water or milk. Sometimes the yolk of an egis is aulder, and sometimes it is dissolved in soup ur wine. It is also emphoyed in making certain liqueurs. In a pure state, it soon satisfics the arpetite, and is very momishing; when it contains spices, it is also stimulatiug. Good $C$. is externally smooth, firm, aml shiningmot sritty in the fracture-casily soluble, aromatic; not viscil after having been liguetice and cooled, Lut rily on the surface, and leaves no sedimont of foreign sulistances. $C$ is alulterated in many ways, by mixine it with rice-meal, oatmeal, flour, potato-starch, ronsted hazel-nuts or almomls, amb with benzoin, storax, \&c., in place of vanilla, The Mexicans, from time immemorial, were acenstomed to prepare a beverage from roasted and poundeal cocoa, dissolved in water, and mixed with maze. meal and sjuces. This they calleal Chocolatl (chooo, cocea, and hot, water). lirom the Americans, the Spaniards derived an aequaintance with $C$, aurd ly them it was introduced int., Lurnpe in 1520 . C. is used in Sonth America, Spain, and Italy, more than in other parts of the world, althengh it is used to a consilerable extent in Germany. Its use in Britain has given place in a great measure do that of the simpley coena.

## CHOOCOLATE ROOT. Sin (iEcx.

(HfOIL (lat. domes). In its literal sonse, the $C$. is the $g^{n}$ rtion of the chureh devoted to the singers; and in all descriptions which concom the ritual it is so linited, imblinder only the space frem the western dowe ar sereen to the cind of the stalls, whilst the part from the stalls cast wari to the high, altar is called the prestyters. liut in molinary langrame, and wem as used ly arehitects, it denotes the intire space which is enclosed for the perfomande of the principal part of tha serviec. In this sense, it incluths the ( $:$, proper and the preslytery, and corresponls to the chancel in parish churches. Where the "hureh is cruciform, and the turm is confined to the castern limb, it comes to be cotively differcat
from the C. in the ritnal sums, on the stall-plate, which in such a builuing is commonly situatal either umber the tower of in the nave. In large churches, the aiste grameally rums ahner wach sibu of the C. and freguenty fasses acrose the canst chel of it ; an armandment which is very comama in the larger churehes of the continent which have pelygonal or sunicircular treminations- - $C^{\text {a }}$, is alsw the name given to the singers of the "homal serviee
CHOHR-SCDELN, WYIOHA-WALA, the serem or wall which divides the choir and preshytery from the side aiskes. It is oftera bey richly ornamenterl.
 Jre Je, minister of homis XV., was lorn Jume 1s, 1719, educated ly the lesuits, and on the comphetion of his stuilies, cutered the amy. The fought hravely in the Austrian Wars of Sucess siom; but only after he had attracted the fancy of the king's mistress, Madane l'mmpadour, dit fortune also really favone him. Through the influence of Natame I'ompalour, lo was mate licutenant-gencral in 1745 , ambassalur to the conrts of Rome amb Viemna in 17ati, avel Suc de Choisenl in 1758. C. now became instrumental in bringing about a family learne of the fomrion monarchs in Europe; and in 1763, at the close of the war so disastrous to the French arms, he ohtained, by his prudence and dexterity, milder terms for his nation than hal been expected. This maie him very popular, as did also lis successful attempt to overthrew the Jesuite. In 176t, Alame Pompalour dien, hat the ${ }^{\text {mw wer of }}$ C. contimend unabated. He conceived, and almost carriod out, a plan for the formal :mancipation of the Gallican Church from prapl intlunce, paid great attention to the improvement of the army anl navy, leveloped the trade and industry both of the nation and of the colonics, and opened up anew an intercourse witl lolia, whose native princes were assisted by French nfficers in their ondeavours to expel the British from the penimsulia. He hat spics in every European court, and so ruled all diphomatic and political cabals, that the Empress of Russia, who Ureated him. callen him Lo "ocher de l'Europe ("The Driver of Eurone"). Shat the
 I'ompalour in the royal affections, gramally alienatel Louis from his ahle ministor, and in 5700 he retired to his magnificent estato of Chanteloup. where he lived in ${ }^{\text {rincely }}$ splendour. After the accession of Louis XVI., (. receiver prmission to return to Paris. $1 \mathrm{I}_{\mathrm{e}}$ was often consulted, hat never recovered his ollicial lnsition. Ife died Dhay 7, 1755.

CHO'KE-CHERRY, a nome given to certam mearly allied species of Cherry (q. \%) , of the Birdcherry section of the genus or suh-genus, matives of North America, laving small fruit in racemes, and the fruit at first rather agreeable, hut afterwarls astringent in the montli. Some confusion las long existed as to the ditferent kinds. and their butanical naraes (Premus or C'erasus Virginienus. serotina, and borealis) are not more determinate than the popular ones. Perhaps they onght to lo regarded as mere rarieties rather than distinet species. They have a considerable resemblance to the Portugal Laurel, although the leases are dechinons. The lark is used is a fobrifuge and tonic, under the name of Wild Cherey Bark; and ly distilling it with water. a volatile oil is ohtained from it assueiated with hydrocyanic acin, called oil of Wihl Cherry. This lark allays nervons aritation, and is particularly suitable as in tirst tonic in cases of recorery from fever or inflanmation.

The sucome chass of rauses comanots in inflamation of the thoat, w inritatim of the organs of ablutition: constrictions of thr passage, $2 s$ in crib-hiting lurses; mancention of the uspphares, which is apt to rien aitur ' $'$. and is the cause of a relaposo lastly, withont any discass of the dechutatimy urgans, in animal may be doked by eating tons uredily, mol imperfectly masticating or salizatime its fomb.

Siymptoms.- These vary acemoliag to the prosition of the obstruction. If high up in the pharynx, the animal comot swahlow, finces great listress, and attompes to cough "I the ehjoct. Saliva drivela from the nouth, the anmal chew: and makes an occasinnal ineffectual eflint to swatlow. The lreathing is very greatly distmberl. lu some cases a large hung, of form has leemn tixed in the laryux or upper part of the windpipe, and has sudulenly sutforaten the mimal. Whon the ohstruction is in the course of the gullet down the neek, the symptoms are very sinilin, thonch less wrent, and thore is additionally the local sign of swelling, with the peenliar harducss or sultuess of the substance indieatiog its bature. When an anmal is choked ly it sulstance louging in the gullet within the chest, the symponns are mome mysterions, and likely to miskut. 'The amimal swallows: a considerable grantity of hume may
 thrown "1p, as in the act of vomating. The atistress is great; and in the comase of there or fom datys, unkes the anmal is relieved. it dies of pustratim. In the ox. sheep. and goat, the most alarmint symptons, in any case of C., arise from the panch hecoming distenterl ly gas. This combitun will be treated mader the leal Hove.

Tratmonh.-Renuove the ohstroction with the hand, when you can. C'ause the anmal toswallow the substance, if possilite, hy givines it water or oil. Carefully push the offenting agint down ly a

Irwiban: -
prohaus, if it is possible to affect this. and if withelraval low the month is impractieable. In some eases, the gullet has to be cut intor by a pualifiel surpeon. After a case of (. . keep the animal on sult foul, aml attond to its wenural health, in order the aroil a relapse, which is of frequent wemerrme in cattle.

CHOLERA, a Greek term usel in the llipph. cratu writinere, but of indeterminate etymolory,
being deriverl perhans from cholé, bile, or from cholera, a waterspout or gutter. It is now universally employed in medicine as indlicating one of two or three forms of disease, characterised by vomiting and purging, followed by great prostration of strength, amomang in severe cases to fatal collapse. The variety ealled cholera sica (dry (.) by ancient writers (in which collape and cleath take piace without discharges) is comparatively rarely olserved. The miller forms of $C$. oeent almost every summer aul autumo, even in temperate latitules, and are hence terned hy some-in reference to this country, and liy way of contrast-Eritish or Summer C. ; while the more devastating and fatal forms of the disease are generally surposel to originate only in tropical countries-especially in India-and thence to be proparated epidemically over vast populations. and in a somewhat regular geographical course, reaching this eonntry usmally through lersia, the steples of Tortary, linssia, and the Baltic, at the same time extenling to Egypt. Turkey, and the south of Europe. These rery fatal forms of the disease are commonty eatled isiatic, Oriental, or Epidemic C.; sometimes Chulera Morhus, or l'estilential Cholera. The miller forms are sometimes also ealled Bilious C. ; anl the severcr, spasmodic C., from the character of the symutoms in each. Some writers of great authority are inclinel to consider the two furms as one disease, varying in individuat eases and according to season. It is certain that it is not always possible to distinguislo the one farm from the other in particular instances: lout the marked difference between the mortality of groups of cases of British C. on the one hand, and of Oriental or Asiatic C. on the other, reuders it probable that there is something in the latter disease which amounts to a distinction in kind. Whether in the milder or severer form, C. is usually ushered in by a perind of premonitory symptuns, when the more distinetive charaeters of the disease are not established, the case resembling one of commun diarrhea ( ( I. r.) or looseness of the bowels. At tinis stage, it is very apt to be neglected, and unfurtunately, in the severer epidemic forms of the disuase this is the only stare much unler control. Whenever, therefore, there is a reasonable suspicion that Epidemic C. is threatened, every person attacked with diarrhea should make a proint of phacing himself mder medicat alvice, and, if possible, of eseaping from any situation in which epridemic disease is known to be prevalent. Ite shumld also be particularly attentive to diet, and especially to the purity of the water he drinks, any tin its absolute freedon from contamination by animal matters filtering through the soil, or thrown into watercourses by scwers, \&c. If water alsolutely cammet be ham in a pure state, it should be boiled before beine used for drink, or indeed for any domestic purphse. Many cases of C., and several local ephemics, have been traced in the most positive manner to organic imprities of the drinking water; anl no single canse of the disease has been established by so mueh evidence as this. Nence, in all prolability, arises the well-known preference of C. for how sitnations, and purticulaly for the low lying flats on the banks of rivers, especially where the inkahitants are suppliml with water from streams pollated ly sowerach, and wells intos which the contents of dranes are permited to filter from a superior clevation. Sore br Show's work on the Communieation of Chelera, 21 elition, 1855; also the Tipport of the himistrar-monerd of Enghat on the Cholera of 18:5-15 5!, and his 17th Anmazl lieport, for 18.51.

It it hardly within the scope of at work such ats this to prosut is minute description of fully developed C. in its severer or Asiatic varicty. It is
truly an appalling pestilence, ${ }^{*}$ too easily recognised by a few leading features. After some hours or days of simple relaxation of the bowels, vomiting commences, and occurs again and again, accompranied by frecuent and extremely copious discharges downwarls, at first of matters eoloured with bite as nsnal, hut in the end of colouless and turbiel fluid resem. hling water in which rice has been boiled. These discharges (often to the extent of gallons of liquid), sueceeding each other with the most alarming rapidity, act as a drain upon the fluids of the body generally; and by the changes they effect upon the blood, contribnte to bring about the state called collapse. In this condition, the patient lies motionless and apathetie, except when tormented by cramps, which are of frequent oceurrence; the surfaee is colll; the finger-ends, lips, and tip of the nose hecome livid; the eyes are deeply sunk in the sockets, and often bloodshot; the tongue is clammy; the breath withont any sensible warmth when caught on the hand ; the pulse is suppressed at the wrist, the breathing extremely slow and feeble, the heart just audible through the stethoscope. Purging and romiting have ceased; even the urinary secretion is dried at its source. In fact, all the vital processes are nearly bronght to a stand, and unless reaction comes, a few mimutes, or at most a few hours, suffice to bring life to a close. Reaction in the nost favourable cases is sradual and withont accident ; it is not unfreguently, howerer, accompanied ly fever, elosely resembling typhus, and constituting, at least in the temperate zone, one of the cticef dangers of the progress of cholera.

Medicine is almost porrerless against C., except in the earliest stages, in which the treatment usually pursued in diarrhoa (4. v.) has sometimes been found useful. Very remarkable temporary restorative effects have been found to follow the injeetion into the reins of dilute solutions of saline matter, resembling as nearly as possible the salts of the blool which are drained away in the discharges. Unhappily, these experiments have as yet only very imprectly succeeled. The patient is restored to life, as it were, from the very brink of the grave; lont he revives only for a few hours, to fall back into his former condition.

The true medicine of C ., so far as we yet know, is preventive melicine. The measures to be adopited have been partly pointed out above; in addition, it may be said that personal cleanliness is of the first importance; and that all unnecessary contaet with the siek should be avoided, as the disease is prolably to some extent eontagions, though by no means in the highest degree. In short, all the precantions are to be taken which are recomnended in the case of Epidemic Disease (y. v.).

CHOLESTERINE is one of those bodies which are termed by chomists lipoils, or non-saponifiable fats. It was orimially discovered in gall-stones, but is now reeguised as an ordinary constitnent (atthough ocemring in wery minute puantity) of hite, hlood, and the tissue of the brain. It likewise occurs in phs, the contents of cysts, and other morbilt thaid proxlacts.

It separates from its sohutions in glistening nacreons seales, which, when examined moter the microscone, appur as very thin rhombic tablets, whose
 are $79^{\circ}$ 3s. Different formala hatio bean assigned
 sons in lingland and Wrales; aul that of 185. $2,20,097$ persons. Siee the Rugistrar-general's licport for the latter year. This estimate is exclusive of cases of fatal diarrhwa.
for its composition, the one gencrally aceepted lecing $\mathrm{C}_{37} \mathrm{H}_{32} \mathrm{O}$. It is not always very tasy of idetection in animal fluids, but if, by its insolnlifity in water, acids, and alkalies, and its soluhility in hat alcolnd and ether, it has been recoguised as at fatty substance, it may be readily distinguishod from all similar substances by thie measurement of the andes of its rumbic tablets. The lest methot of groparime ( : is by boiling gall-stoncs contaning it in alechom, and filtering the solution while hot. From this lut filtered solition it erystallises as the fland enols.

Chemists have oftained snistances known ab cholesterilins and cholesterones from the decomposition of cholesterine.

CLIOLJT a town of France, in the department of Maine-ct-Luire, on the right bank of the Mame, © miles sonth-west of Angers. Here, darine the Vendean war, two actions were fought in 1793, in both of which the royalists were defeatel. In the first, they lost their hrave gencral honchamp; and the sccond drove them across the Loire, thens virtually deciding the war aqainst them. It has manufactures of fine woollen and mixel falmics, and leather, and a trade in cattle. Pop. 9638.

CHOLU'L. 1 , a once flourishing, but now decayed, town of Mexico, 60 miles to the east-south-east of the eapital, and 15 to the west-morth-west of La Pobla. Cortes found in it 20,006 houses, and as many more in the suburles, and also 400 tomples. Now the place contains only about 10,000 inhalhitants. Its most remarkable memorial of ahoriginal times is a pyramid of clay and brick, surmomintil on the thr by a chapel of Spanish origin. Its height is 177 feet, while the site of its lase measures 480 yards. C. stands on the table-land of Anahnac, at an elevation of 6:92 feet aloove the level of the sea.

CHO'NDA, a town of Gwalior, 18 miles to the north-west of the fort of the lattor name, in lat. $26^{\circ}$ $27^{\prime}$ N., and long. $78^{\circ} \mathrm{E}$. It claims notice merely as the scene of a decisive victory gained by Sir Hugh, afterwards Lord Gough, over the Mahrattas, on olth December 1843.

## CHO'NDRINE. See Gethtine.

CHONDROPTERY'GlI. Sce Cartilaginots Fishes.

CHO'NETES, a gemus of fossil brachiopodons mollnsc:, nearly allice to the well-known genus Prodectus. It is characterised by its transversely. oblong shell, and by having the long margin of the rentral valve armed with a series of tubular spines. Twenty-nine species have heen described from the Paleozoic furmations.

CHONOS ARCHIPELAGO, a group of islands lying off the west enast of ratagonia, south Ameriea, in lat. $44^{\circ}-46^{\circ} \mathrm{S}$, and lons. $74^{\circ}-75^{\circ} \mathrm{W}$. With the exception of a few of the

Chopine. most wosterly, all are bare and scantily peopled, though several of thern are of considerable extent.

CHOPIN (Seateh, chapin), the name of a Swoth liguid measure equivalent to the English tyart.

CHO'PINE (Spanish, chapia), a high elog, or slipper, deriving its name, as is supposcd, from the somel chap, chop, made by the wearers in walking. Chopines were of Eastern origin, But were introduced into Eusland from Tenice dnring the reigu of Elizabeth. They were worn hy ladies under the shoes, and were nsually made of wool covered with leather, often of various colours, and frequeatly painted and gilded. Some of them
were as much as half a yard high; and in Venier, where they were miversally worn, their leeight distinguished the "plality of the lanly. Tha" C ? is
 pinying representaton of : 1 . is coppoll from Dunce's Illustrathons of shakespertor.

CHORAGTU MONTMENTS. She chorames or ferson at $A$ thans who, on 1, clatl of his tribe, hand sapmonted the chorts ( $(1 . v$. . , and who, in competition with the wher tribes, had exlibited the best

person, who had been a smuggler, went by the name of Chounu-a corruption, it is sail, of chat-huant ("screech-ow')-because, while he and his accomilices were cugrgeal in their nocturnal work, they Were wort to be wanned of their danger by some one on the watch imitating the cry of this lird. At the priod of the revolt, however, he followed the humble occuration of a clog-maker. The first indications of au auti- evolutionary spinit in Brittany manifested themselyes in the begming of 1791, Wheu several trees of liberty were destroyerl at ni hit, and other more serious outrages committed. These disturbances were fomented by seditious priests. In 1792 an iusurrection was plammed by the Marquis de la Rowarie, with the sanction and aproval of the two brothers of Lonis XVI. The arents of the marpuis eutered into commmications with Jean Cuttereau-well known for the reckless andacity of his character-aml other smugglers: but haring the misfortune to be arrestel, the carryiug out of the iusurrection devolved mon the latter. The Choucnorie as the insurrection was called, at first discraced itself, both by the drumen licence and the craelty which marked it. After screral successiml exploits of the guervilia sont, Jean Cottereau perishel in an cugarement which took place on the ?Sth July 17:1t, near the wool of Mislon, the theatre of his tirst eftorts. Before this, however, other and more illustrivus leaders hat appeared in Brittauy to difcet the movement, the chief of whom were lieorges Cudoudal (q. r.) aud Charette. Throngh thein endeavours it was mare widely extended, and for a time seemed likely to inperil the secmity of France, lat was suppressed towards the close of 179. T'etty spurts of insurrection, however, broke wut till ahont 1893 , when the Chounaerie eeased for awhile. In 15l:-1815, it again made its appearance ou hoth lanks of the Lone; and after the July revolution, was once more excited by the Duchess of Jerry on behalf of the Duke of Bordeanx, That crushed by the energetic measures taken by M. 'Thiers.

CHOU(iH (Frailus), is genus of liris of the erow fanily (Cortidet, but aproachans to the eharacters and appearance of the starlings (Sturnide).

The deweth of tha hill hats indural smme naturalists, : mong whon was "avire, to phace them lesside the bompec, hat this is mow gencrably regarlan as an crror; they arree with crows in having their
nostrils covered with stiff bristles directed forward, and in their habits. The beak is lonerer than the head, strong, areled, and minted. The tail is slightly rounded. The only Juropean species is the common C... sometimes called the Cornish C., or Rell-legged Crow ( $F$. graculus), a widely distributed but very local Lird, inhabiting the Swiss Alps, the high mountains of Spain, of Greece, of India, ancl of J'ersia, the south of Siberia, the borth of Africa, and some parts of the British sca-coasts; but almost exclusively confined to situations where there are high eliffs. Iu these it gencrally makes its nest; sometimes, bowever, in mined towers. Its long looked claws euable it to eling easily to a rough rock, but it seems unwilling even to set its feet on turf. It lives in societies like the rook. It feeds on insects, lerries, grubss, and grain. It is easily tamed, becomes very familiar and forward, and exhibits in the lighest degree the curiosity, the pilfering disposition, and the delight in brilliant or glittering objects, which also characterise others of the crow family.-Other species of C. are lnown, natives of Australia, Java, de. Some naturalists mite the chocards and the choughs into one genus.

ChoyA. See Cini Root.
CHRIsAI (Gr. chrismo, mintment) is the name given to the oil consecraterl on Holy Thursday, in the Roman Catholic and Greek Churches, by the bishop, and used in baptism, confirmation, orders, and extreme unction. There are two kinds of C.- the one, a mixture of oil and balsam, is used in buptism, confirmation, and orders ; the other, which is merely plain oul, is used in extreme unction.

CIIRI'SOML, the mame of the white vesture laid by the priest on the child in former times at baptism, to signify its innocence. It was generally presented by the mother as an offering to the chnreh, lut if the ehilil died before the mother was 'churched' again, it was used as a shrond. By a common abuse of worls, C . came to te applied to the child itself. A C. child is a child in a $C$. cloth. As late as Jeremy Taylor (Holy Dying, e. i., s. 2), we have the following: "Every morning creps out of a dark cloul, leaving behind it an ignorance and sidence deep as midnicht, and umbiscerved as are the phantasms that make a chrisome child to suile.'

CHRIST, a title of our Saviour (see Jests), now in ueneral use aluost as a name or as part of his mane. It is originally Greek, signities anointed, and corresponds exactly in meaniug and use with the Hebrew word Messinh (q. r.); so that this tithe given to Jesus of Nazareth, is an achnowlempment of him as the Saviour long momisal to the lumse of Jacol aml to the human race. As prophets, priests, and kiugs were anointed on being called to thair several oflices ( 1 Kings i. 34,39 ; 1 sian. xvi. 13 ; Exod. xxix. 7), so the Sivimur was auminted as at once prophet, priest, and ling; the lloly spirit, often represented under this tigure, boing given to him to qualify his hman mature for all that belonged to his mediatorial wlice and work.

The whole system of Christianity deperuls on the doctrine of the l'akoy of C'masist. An essential difference necessarily exists on almost every point lutween the systems of doctrine maintained hy thuse who do and hy thase who do nut acknowledre a union of the divine and haman matures in his person. Shuse of the carly herthes maintaned an prinion, which has lone cuased to have any supporters, that the levely of $\therefore$. was not a real boly, but a nury visinary apmarance. So Dorerat and Gxosmes. The opposite extreme is that of Socinians (y. . . ), by whon C: is regardel as a mere man; whilst Ariaus (q. v.) regard him as in his
preexistence-i. e., before his internation-the highest of all created beimes; and aceording to the genmer ally received doctrine of 1 hristians, he is '(ive and man in two distmet matures and one pursmo.' 'This a loctrine, of course, lears a most intimato relation to that of the Traviry ( $1 . v_{0}$ ) ; anl all whol hohl the: divinity of acsus Christ, verame him ats the incarnate Seeond l'erson of the diodlecul. 'Tlue proof of the" Whole doctrine may almost $1 x$ said to womist simply I: a proof of the ilivinits of $\therefore \therefore$ : his real hemomity, althongh equally impurtant, heing no longer disputed. Anel this proof is fomma, nut so manh in lanticulab texts which directly assert the divinity of C.-althmurh such texts we inamotiont as in the multiturle tif texts whinh imply it, amp sulmit of no reatsonalile or natural cxplanation alart from it ; and in shawing that cortain doetrines are tanglat in Sirripure which cannot be maintained without 1lis.

The ancient Apollimarians, Entychiuns, Nonophysites, \&u., regarded C. as having only one mature -a compoumd of the divinc and haman ; lut such a motion is that C. had only a human body, the divine wature supplying the place of a sonl, is held to be subversive of the whole Christian system; and his human natore, to be real, must le viewed as consisting both of a true body and a thue soml. His human nature never existed, however, apat from his divine nature, and was 'coneeived by the power of the IIoly Chost.'

Closely comereted with this subject is that of the humiliation and consequent excllation of $C$., in his character of mediator between Col and man; a subject, to the former luanch of which belongs the whole doctrine of the arork of C . for the realemation of sinners, including the great doctrine of ATONE MENT ( $\mathrm{q} . \mathrm{V}$ ). To the latter belougs the ductrine of the reward of his work, in his sitting at the right
 feet; not only exercising domimion as king in his church, lint over all things for the alvancement of the salvation of his elareh, and of every member of it ; while also He semds forth the Holy Siprit to apuly to men the blessings which, as the reward of his worl, lle has mediatorially obtained for them; and still contimuing to act as a pricst, makes contimual Intercession (y.v.), founded upull his worle and sacrifice.

ClILIST, Ordei: of, in Portecil. When the
Templars were expelled from France, and their Philipue le Bel, with the sanction of I'ope Clement Y., they were reccived into l'ortugal, and their order revived in 1357 , under the title of "the Grier of our Lord Jesus ('hrist.' With sume ditionlty, l'ope Juhn XXII. was indued to sametinn the new order. The Finights of the Urder of C'hrist joincel the PortuFuese in all their crusarles arainst the intidel, and also in their African and Indian expeditions, receiv. mine in compernsation contincal ahbutions to their own jossessions. The graml Padger of the L'ortuguese prior of the oricr was Onder of Christ. invested ly lopr Calixtus [I]. with power equal to that of a bishop; and, as an encouragement to adventure, the kniglits were promised all the
comotries which they mingt riscover, to le $l_{16} l_{1} 1$ under the protertion of l'ortugal. At lousth, their woalth smil jwwer excited the jealousy of the kinery of Portugal; their fiture aespisitions, abl,

 of adminstratom and erannl-mastor were transferafl to ther arwn. A fince dosster beloneiner whe therer is still to for sern at Jomare, (0) which plate: the suat of tho wher was transforme from (istro- Alarime in 1366. Nuble descent, and throe yours' military sorvice aeranst the intidel, were required fur atmos simb. The mombers took the three momkish vows uf clastity, Juverty, amd werlionce, thll the $\mathrm{j}^{\text {min }}$ rolecsed them from tles first two, on combation of their applying the thind part of their revenues to the supuert of 'lomar cloister, the priasts of which were bound by the three vows. 'Iluis cloister is now a theolorical institution $f$ or the instraction of the Irriests of the order.

It is sad that the order still jussesses 26 villan! and famms, ind 434 pebends. It is very mumerous

also some specimens of the frescnez of the catacomks -gives an idea of the manner in which the beathen artists ex]ressed their notion of "hrist. He is depicted as a bearded philosopher in prode. A letter which Lentulus, the predecesson of lilate, is declared to lave written to the Foman senate, hut which is evidently apocryphat, attributes to $C$. a figure and countenance of manly leauty. Jowarls the middle of the sth c., John of Damasens givere a deseription which he pretends to bave gatherea from more ancint autluns. According to him, $\because$ was tall, hal beatiful eyes, lat the eyehrows meet. ing: a remular mose, blowing locks, a black beard, and a sauly or straw-culoured complexion, like his mother. Among the most ancient representations of $C$ which profess to lo prortraits, are the two paintines in the (alixtine and lontine catacombs near Lame, and which are given in Arghis Rome Suhtermen Now. The Saviom as there represented with an oval viana, a straight nuse, arched eyelrows, and high farehead. The expression is earnest and mild: the hair is parted on the forchead, and falls ower the shomders in waving locks; the beard is short and scattered. These two busts agree with the apocryphal letter of Lentulus, and the artist or artists who exrented them, may possibly liave employed it as a menlel. The majority of the Byzantine and Italian painters, down to the age of Xichael Angen and Raphael, athered to this type.

CHRIST or CRIS CROBS ROW, the alphot arrangert in the form of a cross, for the use of children; and sor winted, in whe 'hom' books, or mimers. The letter A was at the top, and $Z$ at the font of the cruss.
(HILI'STCHURCH, a parliamentary and municipal horough and scapart on the English Chamel, in 11 ampshire, on the sinth-west lorrer of the New Furest, at the heal of the estuary formed by the Awon and Nitons, It miles south-west of Southampon. It has mannactures of fusee chains for clucks and watehes, aml of hosiery. It has also a salmem-fishery. The priony church, one of the most interesting and magnificent of English ecelesiastical structhres, was partly built on an ancient fonndation ly Flambard, Bishop of Durham, in the reign of William linfus. It was altered and ahked to in sulserpunt regns. It is now (1861) undergoins much needel restorations. A battery of artilery is generally stationes in the commolions learracks. The borongh comprises two favourite watering-places, Aludeforl and Bommonth. There are traces here of a lioman temple to Mars. D'op. in 1861, 936s. It fethrns one medaber to parliament.

There i.s mow only one sinneureis wil the list, wo one maty luhd a eanomry satio a professor, the awhleacon, or the sub-rlean. Thes stmbentships are now 80 in mumber, and are, as Infore, divided into junior and senior stadentships, dilling considerably as to emolament. All these we now open, the old system of apointment by amanation having been abolislod. Three jumar stmdents are electex every year at Whitsumticu, and becides these, three are sent up yearly from We'st. minster. The senior stulentships are also open, With the usnal linitations of independent inemme and conformity. Of these, lowever, only a thimd ean be held hy laymen. The studentships were very poor ; the jumur about fen, the soniow about $£ 50$ per annum, lint an improvement in this respect has been included anong the recent changes. Finme valuable exhilnitions, however, and wi: lemefieos, are in the gift of the socicty. In IS60, there were about S00 names on the cullerge lowks. No statutes were given to (., wwine to the death of the king having taken place shortly after the final formation of the college. It is, in conscouence, entirely governed by the orders of the doan amd chapter, to the total exclusion of the tutars. Tu this separation of the governinis from the teaching body, as well as to the small value of the stulentships, may be ascriled, in great measure', the want of success in the schools, which has, for mathy gears past, brought discredit on this nagnificent society:

GHRI'STENING, a term often used as equivalent to Baptism (iv.v.). It is disliked ly some, and of comse liked by others, as favomumes the dnetrine of laptismal regeneration ; being, indeed, aceming to its derivation, expressive of the notion that a persom is male a Christion in baptism. But, Ijkn many other terms, it is frementiy employed without referenee to its origin, and vithout any intention of conveying the opinion which it might le strictly held to imply.

CHRI'STIAN I I., king of Jemmask, Norwiny, and Sweden, born at Vybore, in the island of Fionem, 2d July I48l. He ascended the throne of Donmark in 1513. Shortly after his marriage in ISIS, with a sister of the Emperor Charles V., a young Norwegian peasant-girl, with whom C. was in love, died, or, as it was beheved, was murdered. That natural ferocity, for which $U$. was surnamed the Arym, burst forth most furiously om this occasion. Ite caused the goveruor of the eastle, 'Forben Oxe, the suspeeted murderer, to be heheaded. I Ie afterwards declared open war against Sweded, took Stockholm through frand, and had himself erowned bing. But the cruel vengeance and trualuery of $C$. after this event excited the indignation of that conntry, which, healed by Gustavus Wasa ( $4 . v$. ), succected in driving out the lanes, liberating itself from the yoke of the ILouse of Kalmar, and finally electing Gustanns Wasa (in 1583) to the throne. In Denmark, too, the aristocracy hand risen, and an insurrection in Jitland

CHRISTLAN CUARITY, KXHATS OF THE: Onder of, in France. Kiar Ilenry 1ll. havines instituted the order of the Jhuly blowst for primees and [utsoms of distimetions. fommed the order of C. C. for the support of maincal afficers and soldiers, who bad dince enorl semvice in the wars. Ite assictud revenues to the mder, drawn from all the luspitals in the kinglum. The kinights whe ous the loft breast an anchored eross embonitereal on white tathety "r satin, with a horoleur of lhate silk, ami in the millile of the cross a lozenern of sky Hue charted with a fleur dre lis or. "llies eompletion of the institution was reservel tor Henry IV., who phacal it under the charge of the
marshals ant eolonels of France; and by means of it, many of those who had served their country faithfully were enabled to spend the latter portion of their lives in peace, and above want. The order formed the germ of that noble hospital the Invalides, which was founded by Louis SIV., and which served as a model for aur own hospitals of Chelsea and Greenwich. When the Invalides was founded, the order of C . C. was superseded.
CILRISTLAN CONNECTION, a denomination of Christians which originated about the berinning of the IUth c. in the United States of America, and is diffused over all the states. The name was assumed in avowed dislike to the acknowledment of any human authority and to sectarian distinctions, aud all doetrinal terms of communion were rejecten, the Bible being adonted as the only rule of faith, and ${ }^{\text {rersonal }}$ liety made the test of qualitication for membership. 'I'be Commection soon came to consist, hwwerer, almost exclusively of persous denying the livinity of Christ.
CHRISTIAN KNOWLEDGE, SOCIETY FOR Promoting, one of the great religions associations connected with the Church of Euglaud, and the ollest of them all. It was fonnded in 1695, althongh it did wot receive its present name till 1701; and had for its olject: '1. To promote and encourare the erecting of charity schools in all parts of England and Wales. 2. To disperse, both at home and alsoan, Libles and tracts of religion; and, in general, to advance the honour of God, and the gool of mankind, by promoting Christian knowledge, loth at home and in other parts of the world, by the best methols that shomld offer.' These (hjects it has never ceasel t's fursue, chiefly directing its efforts to the British dominions; partaking at once of the nature of an elucational association, a Missionary Societr, a Bible Socjety, and a Religious Tract Society; and notmothstanding the operations of other great societies in the se several departments of Christian benevolence, its revenue amounts to about $£ 100,000$ a year. The Protestant missionaries who lalonred in the South of India in last century, were supported chiefly by this society, which has also contributed largely of its fumes for the estahlishment of Christian schools in that country.

## Chelstian NAME. See Name.

CHRISTLA'NLA, capital of Xorway, is situated in the province of Aggermus, in a beantiful open valley on the northem side of the Christiania Fiorid. Pop. 40,000 . C. is the seat of the Norwegian govermnent, the superior courts, and the Storthing. Besides the suburbs of I'ipervigen. Hammarshors, Vaterland, and Grocnland, the town consists of $U$. properly so ealled (which was laid rout by Christian IV. in l614, in the form of a regular parallelogram of 1000 paces in length and hrealth) ; the Oh Town or Opslo, where the hishop resides; and the citadel Agrorlans, from which the l, enal straicht strects of the town can be firct "10m. The most important puhlic luidings are the royal [alnco, the lank and exchanse, the bonse of representatives on Storthing, the govermor's palare, and the "athedral. 'To these may be alded the mivergity, the naly one in Norway, which was
 and 9 extramtinary professers. Abme 650 stments atteme it anmally. 'loms institution contains, lesintes varims scicitific collections, a library of ahmot lajonn lowks, a botanical garden, and an abservatury (in 59 in $42^{\prime \prime}$ N. lat, and $10^{\circ} 50^{\circ} \mathrm{E}$. long.). Than latter was onmel in $1833 . \quad \therefore$ hats
 which the 'Socicty for Northern Antiquities' is
famous. The manufactures of C. are cotton, oil, raper, soap, and bricks. 'There are also numerous distillerius and corn-mills. It exports in considerable quantities wood, iron, anehovies, and glasswares. From 600 to 700 ships yearly enter the port (which, however, is coverell with ice for four mouths), and it has a regular steam-boat communication with Gottenbur:, Copenhagen, Kiel, and Tlull. C., by means of its bay, is connected with Drammen (jop. 10,000), famous for its extensive trade in timber, \&c. The scenery of the whole bay is unsurpassed in beauty. ( $1865-\mathrm{poj}$. 63,504.)

CIIRISTJA'NITY. It is proposed in the present article to give a very brief outline of the system of the Christian relicion, and of the evidences by which its truth is established. The Irincipal parts, both of the system and evidences of $C$., will be found noticed under seprarate heads.
C. comes to us with a claim to be received as of divine origin. It is no product of the human mind, but has for its author the Being whom it sets before us as the object of worship. It is consequently altogether exclusive; it claims to be deemed the only true religion - 'the truth'-and admits of no compromise or alliance with any other system.
C. cannot be vicurel as distinct from the religion of the Jews and of the patriarchs; it is the same religion accommodated to new circumstances; there has been a change of dippensation only. In studying either the system or the evidences of C ., we are compelled continually to revert from the New Testament to the Old, and must in some measure trace the history of the true or reveal al religion throngh the previons and preparatory dispensations.

The whole system of C. may he regarded as haviny its fomdation in the doctrine of the Existence of one God. See Gon, Existevce asp Attributes of. Next to this may be placed the doctrine of the Fall (q. v.) of Man. Man is represented as involved in miscry by $\sin$ (q. v.)-original and actuab-and every individual of the human race as incapacitated for the service and fellowship of God, obnoxious to the displeasure of God, and liable to punishment in a fature and cternal state of being. Sec Punisnment, Futuie. And here we may regard the doctrine of the Atonement (q. v.) as next claiming our attention-a doctrine tanght in all the sacrifices (see Sacnifice) of the patriarchal and Jewish dispeusations, as well as by the words of inspired teachers. Man being utterly incapable of effecting his own deliveranco from sin and misery, God sent his Son to save sinners, to deliver them from hell, to make them holy, and partakers of the eternal joy and glory of herven.

By thuse who recrard Christ as a more ercature, atonement or reconciliation with Gol is made to depend on the repentance of man as its immodiate canse ; whilst the life and death of Christ are represented as merely an example to us of obedience, virtue, and piety in the most trying circumstances; the doctrines of a propitiatory sacrifice, a substitutiounry obedience, and an imputed righteousness, with all that form part of the same system, falling empletely and even necessarily to the ground These ductrines, however, are all consistently maintained in connection with the doctrine of the Trinity and tho generally receivel doctrine as to the person of Christ. See Chisist and Thinity. Tho very incarnation ( $q$. v.) of the son of Goll is regarded as a glorious cheplay of the divine condescension, and is wonderful exaltation of human nature: whilst a persomal enjoyment of the highest dignity and bliss of which hmmanity is capable in the favour and followship of God for ever, is to le attained ly faith in , lesus Christ. Sce Faitio ani distification.

The indissoluble connection between faith and
salvation arises from the divine appointment, but secures a moral harmony, as it provides for lrinering into operation-in accurdance with the intellecs. thal and moral nature of man- of most powerful and excellent motives for atl that is morally goom, the partakers of salvation binas thas fittel for the followshep of Jim into whose fivour they aro received; and as it prevents the prossibility of any of them taking to thansclyes, or giving to whers, the glory of that salvation which they really owe to Christ, and which thoy must thricfore aseribe to Christ, as God is a (ion of truth, and trath must reign in the kinglom of heaven.

Salvation is ascribed ly all Christions to the grace of (iod. The mission of Christ was an atet of supreme grace ; and all must be aseribed to praco for which we are indelted to Christ. The doctrine of grace, however, is a part of the system of C . on which important differences subsist, especially as to the relation of the grace of Gool to individual men. Such are the differences concerning Earcuros ( $\boldsymbol{r}, \mathrm{v}$.), and conecrning the origin of faith, and man's alility or inability to believe of himself. But ly Christians fenerally, the personal relation of the believer to Christ, and his faith in Christ, are ascribel to the Holy Ghost or Spirit of God, the third person of the Gothead, and so to the grace of God. See A eminius, Calinism, and Pehicius.

In the view of all who hold the doctrine of the Trimity, the doctrines conecrning the Spirit of God form a very important part of the Christian system. To the agency of this person of the Godnead, lesides all that is ascribed to Him concemmit the human nature of Christ, we are indelted for all that is spiritnally good in man; He, in the cconomy of graee, being sent by Gond, on the intercession of Christ, to communicate the blessings purchased hy Christ in his obedience and death. See Holy Ghost.
Salvation begins on eartly; and whenever a man believes in Christ, he is a partaker of it-is in a state of salvation. It forms an essential part of the Calvinistic system, that he who is in a state of salvation always remains so, and that the salvation begrun on earth is in every case made perfect in heaven. See Jerneverayce of the Samirs. Thus salvation is viewed as begining in lidemera. tion (q.v.), and as carried on in Slempification (1. v.), and all its joys as connected with the progress of sanctifieation. Faith in Jesus Christ cannot be imaccompanied with repentance, and repentance is always renewed when the exereise of faith is renewol. Fur although all believers are suints or loly, as set apart to God, and in contrast to what they previously were, yet there is none in this life free from tempitation and sin ; the successfin tempter of our tirst pareats, who assailed our Saviour with temptation and was defeated, being still the active enemy of men, against whom believers in Jesus Christ are called to eontend, to watch, and to pray. See Devil. The sense of responsibility belongs to luman nature; and the doctrine of a Judgent (q. v.) to come may be considered as to a cartain extent a doctrine of natural religion, as may" also that of the Jnmortality ( 1. . v.) of the Soul: hat the clear and distinct enunciation of these doctrines belones to the Christian revelation, to whieh belongs entirely the doctrine of the liesurrection ( $\mathrm{I} . \mathrm{v}$.) of the Dead.

Ot the moral part of $C$., which has already been referred to, it may be sutlicient here to state, that it is as harmonious with the doctrinal as it is inseparable from it; that it is founded upon the attrilnates of God, and is perfectly illustrated in the character of Jesus Christ; and that it is divisible into two great jarts mone, of the love of Gool, and
the other, of the lone of mon, or of ourselvers and our neighbours. Sce Law, Murad.
The merns of arore or of the attainment of the bessinus of salvation, form an important part of tho Christian system. Of thase the Wond of (Gon-ar divine revelation containcl in the Bible (q. v.) -first claims attention, as the means of conversim to Christ and of cilficution in Chrial, the instrument by which salvation is buth bphun and carried on in men. The urdinances of Ged's worship are among
 the claw means of grace. The Sammonts (if. . . ) we means of grice, concornins the preciso ase of which. and their relative importanee als coms. pared with the other mons, convilerable dilli. reme of opinion prevaits among Christians. Thu same remak applises also to the combination of Cliristians into an orgmised buly or conmmenty, the (hureh (1.v.), with its own laws or systrom of churels. govermment ( 1. v.) and chureh-discipline ( q . v.).

We have endeavored to slictch the ontline of the systent of C., as much as pussible aceorting. to the general belief of Christians, merely indicating, the puints on which the chicf differences of whiom exist. Some of the principal controversies will ho fomm noticed under separate heads.
The truth of C . is established liy many different Evidmen, listinct and independent, lut mutnally corrobrative. It appeals to wason, and demands to have its claims examined and admitted. Nor is there any feith where there is not a mental conviction arrived at ly a process of somm reasoming.
The evidences of $C$. are very generally dividel into two grat classes, intcrncel and aternal-the former consisting of those which are found in the nature of the Cmistian system itsclf, and in its adaptation to the nature and wants of man; the latter, of those which are derived from othor sources. The bundary between the two dasses, however, is ly no means so distinct in reality as it aprears in the delinition of the torms. if the multitude of books whici have leca written on the subject of the evilences of C., some are devotel mainly to one of these classes, aull some to the other; whilst some are ouendid with the development of particular evidences or ar, moments, amil some with the refutation of objections, and in Jiarticular of what may be called a greliminary aijuctom -that a diviue revelation can never be estahliohut by sufficient evidence at all. See lievelatios.
The evidence of Mirates ( $1 . v$.) and the cridence of Prophecy ( (y. v.), two of the principal branchess of the external evidences of C ., will be fomm miticed in separate articles. Another argment, which has been much elaborated-fur example. in l'aley's Evidences-is derived from the character and suffer ings of the apostles and other tirst preachers of $(1$; their high moral worth, considered along with their great earnestness and devotechess; the alisence of all possitility of selfish or hase motives; and at the same time their perfect opmortunity of kluwing the tinth of the facts which they proclamenl. I sub. sidiary argument is fund in the admission of the great faets regarding Jesus of Nazar.th, by the early opponents of Christianity. $i$ must impmrtant anil valuable argument is found in the perfect eoherence of all the parts of the Christian system, and in the agrepment, as to the religion which they teach, of all the books of scripture, notwithstamding the widely different dates of their compusitions, and their very different nature in other respects. See Blple. The relation of the Jewish ceremonies to the doctrines of $C$ : sumplies another argment of this kind, capable of bems developed in a soultitude of particulars. The minor concidences between the different books of Seripture have been pointed

## CHRISTIANSAND-CHRISTMAS.

out with happy effect in the Hore Pouline of Paley, asd in ither wirks. The character of our Saviour supplics an argument of great power: the impossilinty of the iuvention of such a character, and of the history in which it is exhibited, by any mellont of human genius, is also urged as corrobmatwe : and the incussistency of the marality disphaved, with the supmonition of imposture, has been dwelt un"n with the same riew. The excellency, buth of the dinetrinal and momal part of the system of C.., its elerating and purifsing tendency, the arremont of its ductrine with the facts of man's sinfunness aud misery, and the snitable provision which it makes for his most deeply telt wants, are principal branches of the iutemal evilence of its truth. The effects of C., where it has frevailed, sulply a confirmatory argment in its farour, which hais formed the suiject of works of great learming and interest.

CImetstansand, the principal town of the province or stift of that mame in Norway, is situated at the mouth of the Torridialself, in the lay of 'luristiansaul. Top. ahout 1900 ( $C$ is the residence of a hishol, and high-bailift or stift-amtmand, and $1^{\text {nissesses a }}$ a hranch if the Nurwegiun Bank, a gymnasimm, and several charitable inumations. The mamufactures are leather, tohacco, cotton, de. Shiplmildige Emms also on consiterahle lranch of its industry. The town, which was huilt in latt ly Christian IV., has an excellent harthome, divided into two parts liy the island of Ohdern, upw which are situated the c(uarautine hospital anch constumhonse. C exports wood, lobsters, and salmon in large quantitics. The tumn and harbur are protected ly sereral fortifications. To the west of C ?

CHRETTANAFELD, a settlement of Maravian brothers, in the nurthern fart of schleswig. was fommen in late. It ennsists of ch honses and alnut Tow inlahitants. The bansex, which are well luilt, and cieenful in apmarance, are arranged in two pramel strocts, with the chinel unun in green flot in the midhle. The settlenent is requesented by the inspecturs or chicfs apmunted by the directurs of the fraternity, and the repmesentatives elected hy the members of the sect. The manufactures ari linen, surp, entton, leather, \&e.
CHEISTANSTAD, thestrondy fortifed carital If of province of the same name in the somth of
 from the Baltic, and obon suth-west of stockholm. ( $\therefore$ is the residence of a meremor, and the seat of a conrt of justice. It is a heautifully huilt thwn, wnd

CHIn'stison. Iobert, an eminent Soottish physician, som of Alexauler Christism, P'rofessor of Himanity in the miversity of Edinhurgh, was born at Bdinhursh, July 18, 1097 ; was elucated at the High Selow of his native phace. and, in I811, lucame a stmdent at the university there. After uraduatiur in 1sis. he provected to Loudon aud l'aris; anil, in the French capitad, studied toxicolugy muler the celelnated ortila, a department of inedical scicnee in which in lyitain his name has become eminent. Cumnencing the practice of mellicine at Eliulurgh, le was. in 1sen, appointed Professor of Medical Jurispmalence in the university of that city, and in $143 \%$ was promoted to the chair of Matcria Medica. Pesides contributing papers on various subjecte to medical jomparale, 1 : is zuthor of a Treatise on Poinems, pullixhere in 1w, recurnisent as a stanlaril work in the subjeet: Bieyrithicenl
 aldress delivered lofore the harveinu society of Elimbursh; a treatise on (ivnnuller Ieqenerution of the Kidnays, L :3: $:$ and the Dispensates?!, a Comi-
 tste. Twice Prwidmat of the Liowal College of Plysicime, Bdinhoumh and Modinary Ploysician to the Queen in Sientliand, in 18.0 he was appointen ly the Chanedlor of the university if Whinburgh one of the assessents of the I niversity C'ourt.
Cmblspuas the diy "m which the nativity of the savinur is whemelc. The institution of this frstival is :tiributed hy the spmimen becretals to Thlesplanms, who Hinmishacl in the reign of Antminus l'ius ( 133 - 161 a. 以.) lint the first certain traees of it are fomm illont the time of
 reign of Docletian (2st-305 A. 1.), while that
ruler was kepping eonrt it N゙icomedia, ho leamed that in multitule of Christians wore assumbled in tho eity to exlobrate the binthelay of desus, inni
 set fire to the lmilduse and all the worshitgmers
 ever, that thare was muy uniformity in the: frrinu of alserving the mativity amonir the early "hurehes: some lelel the festival in the month of Alay or April, others in January. It is, moverthurss, ahmost
 mativity of the sixviond. for it is then the lumht of the rainy season in Jutea, anch shophords combl hardly lee watehing their theks by night in the plains.
C: mot only becane the parent of many later festivals, such as thuse of the Virgin, but aspecially froms the 5th to the sth c., gatherod romed it, as it Were, several other festivals, partly ald and partly new, so that what may le termed a Chistmas Cyete sprang up, which surpassed all ather groups of Christian holidays in the manifold richness of its festal usages, and furthered, more than any other, the completion of the orderly and systematic distribution of church festivals wer the whale year. Not casually or artitrarily was the festival of the Nativity celebrated on the enth of Wecember. Among the canses that ro-operated in fixing this period as the proper one. perhajs the most powerful was, that almost all the heathen nations regarded the winter-solstice as a most important point of the year, as the beginning of the renewed life and activity of the jowers of nature, and of the grods, who were originally mercly the symblocal persmifications of thesi. In more northerly comutries, this fact must lave made itself peculiarly palpablehence the Celts and Germans, from the ohlost times, celehrated the season with the greatest festivities. At the winter-solstice, the fermans held their grat Yule-feast (sue Y'cle), in commemoration of the return of the fiery sum-wheel : and hedieved that, eluring the twelve nights reaching from the Oth Secmber to the Gth Jimary, they could trace the persomal movements and interferences on carth of their great deities. Olin, Berclita, \&e. Many of the beliefs and usages of the old Cermans, and also of the liontans, relating to this matter. passed oree from hathenism to Christianity, and have partly survived to the iresent day. But the chureh alsu songht to combat and banish-and it was to a large extent successfulthe decp-rooted heathen feeling, lyy adding-for the purification of the heathen customs and feasts which it retained-its grandly devisel liturgy, besides dramatic representations of the hirth of Christ and the first events of his life. Hence sprang the socalled 'Manqer-songs,' and a multitude of C . carols, as well as C . dramas, whieh, at certain times and places, degenerated into firces or fools' fostivals (q. w.). Hence also originated, at a later jurion, the Christ-trees, or C.-trees, alurned with lights and gifts, the custom of reciprocal presents, and of special $\therefore$ meats and dishes, such as (\% rolls, cakes, currantloaves, dumplings, \&e. Thus, (', became a miversal social festival for young and ohl, high and low, as no other Christian festival cond have become.

In the Roman Catholic Chureh, three masses are performed at C -- one at midnight, one at claybreak, and one in the morning, The day is also culebrated by the Anglo-Catholic Church-special pisalms are sung, a special jreface is made in the Communion Service, and the Athanasian ('reed is said or sung. The Lutheran chareh, on the enotinent, haewisa olserves C.: but the Preshyterian churches in Scotland, and the whole of the English dissenters, reject it, in its religions aspect, as a human invern tion,' and as "suwouring of papistical will-worship,"
althoush, in linelam, lisesentors as well as churels. mura kerp it an at stopial holitay, on which there is a complete eresstion from all lousiness. Jhat wath the lant handral yoars, the frstivities were ampor priato to ( $:$ have much fallon wif. These at whe time lated with mane or less trillianey till 'amdramis, and with great pirit till Twolith-day; lat now a meeting on the arning, compusal, whon pas.ithe, of the varimes branches and members of a dianily, is all that distimgishos the dity above others.
-IHEISTMAS l:OX a small momergift to persons 10 an inforion comblion on the liay after
 Tuy. 'The term, and also the custom, are essmatially English, thongh the makine of presents at this sceason and at the now year is of creat antiquity. A number of interesting partienla's concarning the C. J. will lne fomed in liramd's Populat Antiquitios. Ifere, we ned refer only to the nsiage in its later anmet. Within the memory of milde-ared persmas, the practice of mivit Christmas boxes, on putty presente, tri aprentices, domestic servants, amb trabsmon, had become a scrinus social nuisance, mote bartionlanly in Jomdon, where every nd anstom semens th limer, and is most dillicult to le ent riel of. IFamse. holders felt under an coblgation to give money to the appentices in the shmp when they dealt, also to vamous inferin parish officers, including scavengres and lampligliters: while shopkecpers, on the other ham, were equally impelled to make presonts to the male and fomale servants of their chstomers. Thus, as reterred to in Christmens, a poen :
'Thally, the loy, with Cliristmas box in hand, Thombhout the town his levious ronte pursizes; Thul, of his master's custumers, implores
The yearly mite: often his cash he shakes:
The which, perchance of corpers few consists, Whose dulcut jingle fills his little soul With joy.'
At length the (: B. system became such an intolarble grierance, that tralesmen stuck mp notices in their windows that no, (hristmas lioxes whalt be given; and at the same time, the publir authinities issuch remmistrances to the same effoct. It Christmas 1 sith, the Secretary of State fon Foreign Affairs issued a cirenlar to the different embasiós, requesting a discontinuance of the customary giits to the messengers of the Foreign lepartment, imm other grovemment servants. Siace this in wimb, the ${ }^{2}$ practice has greatly ducreased, doultless to the imporment of the self-respect of the partics interestel.

CHISISTMAS CAROLA The worl caml (Ttal. cotolo, and Fr, cemeli, itwni dance-prob. ally from Lat, coroller: Welsh, moli, to recl, to dance ; the name is thence applicel to the masie or song accompanying such a dance: cheillon is prob. aldy allied) signities a some of joy. The practice of singing carols, or, at all crents. sacred musie, in celetration of the mativity of Christ as early as the old c., is considered as poved by the circomstance that a larse samploaza helonging to that perion has sowptured upen it a representation of a Christian founly juining in choral praise for this purpose. A centary ar two after this, however, the C. (. seem to have sady degenerated and beome, in fact. so indecont, that the clergy fomme it necessary tu forbisl them. Wher the Anglo. saxon kings, nerrimunt and piety were pleasantly combined in English life a peculiarity that aftected the: C. C , uf that proml not a little ; but ly the lithe c. thu juensity hat maproly lapsen into what wouk now lin considered profanity: The
oldest minted collection of Enclish C. C. bears the date of 1521 . 'lhe majority of these, thourh written by men of learning-priests and teachers-exlubit a lamentable igmorance of the character of the two most prominent persons in the carols-Mary and Jesus. In 1525 was kept the 'still Christmas,' on account of the illaess of King Heury; but with this exception, the sacred season aprears to have been recularly celebrated with joyons nusic and songs during the Tudor perion. in $156, \mathrm{C}$. C. of a more solemin nature were introduced. By the Puritan parliament, Christmas was abolished altngether, and holly and ivy were made seditious badges; and in $16: 0$ the Psalms, arranged as carols, were advertised. After the Iestoration, the C. C. again exhibited a hearty. cheerful, and even a jovial character. Those with which the dawn of Christmas is now annonncen in England are generally religions, though not universally so. In France, the carols at this season used to he much less sacred than gay. Often, indeed, they were grossly Pacchanalian.

See an interesting paper in the Alfonowm for December 20, 1556 ; also Sandys's Christmas Carols, Svo, 1833.

## Christmas rose. See Hellebore.

CHPISTO'LOGY is the doctrine of the Person of Christ. The worl itself is to lee fomm, once or so, in the divines of the 1 the e. (sec Dean Trench on the Sturly of H'ords), but the deparment of scientific theology which it now represents is ahmost entirely the growth of modern, and particularly of German inyury. As yet, it can hardly be sail that the word C . is accrelited in Great Britain, hat the same differences of opinion which led to its aloption in Germany, are heginning to manifest thenselves here also. There are only three methods of apprehending the ductrine of the l'reson of Christ. First, there is the Romomalisstic method. This consists in representine the levelopment of the $\lambda$ ossianic inlea in Jewish bistory as purely natural. and comblitioned by pmrely human and historical influences - in short. as a subjective or self-originated notion, to which there was no corresponlent Divine Tieality. Second. there is, what, for want of a better worl, we may eall the Sruitualistic methom (that of theologians like Neander, liothe, \&e.). This comsiste in representing the development of the Messianic idea in Jewish history as both natural and supernatural; that is to say, it asserts the existence of a Divine Ohjective heality ('the Eiternalson of God') as the loasis of the sulijective idea in the minds of the Jews, and regards the growth of that idea, and the intlunte of historical circumstances, as the result of a supermatural frovidence, which chluinated in the revelation 'of the myst ry of godliness, God maniFint in the thesh.' 'Thirl, there is the Dogmatic muthol, which is the rime accepted ty the common nedo of theoburians. This consints in represmatime the ductrine of the Person of Christ as symbolicell!
 perple from the earliest ases. "Ahraham saw his "(harist"s) hay afiur all.' 'This is interpreted to simify that, ly the grace of prophete illumina-
 foce in a mystomens and inempathe manner the atommant if christ. as it happend in history. - Almutting with the spirithaliste theolugims, that
 some mast a histomical invelopment, the dogmatic Chateluent; hefer, in gemeral, from the former by

of those who had seen him eren with the eye of faith, has induced many orthulox theologians to shrink from making any statement in regard to what may have been the doctrine of the Person of Christ among the ancient Jens.

Christophe, Hexpi, king of Hayti, born October 6. 1767 , was at one period a slave and tavern-eook in Cape Town, St Domingo, and afterwards overseer of a platation. In 1790 , he joined the black insurgents against the French, and, from bis gigantic stature, energy, and courage, soon hecame a leader among them. By Toussaint Lonverture, he was appointed briwadier-general, and employed to suppress an insurrection headed by Moyse, or Moses, his nephew. Captured the latter, ani on his execution, succeeded him as governor of the anthern province of Freuch St Domingo. In 1502, he gall antly defender Cape Town when General Leclere arrivel there with a French army destined for the rednction of the blacks, and effected his retreat with 3000 men, after haring bumed the greater part of the town. The perficions seizure of Tonssaint, he amply revenged, and during the short-lived government of Dessalines, who was slain by a military conspiracy in October 1806, C. was general-in-chief of the Haytion army. In February 1807, he was 2ppinted President of Hayti for life. A republic being. alont the same time, organised at Port-an-Prince, with Petion at its bead, civil war commenced between them. On March 2S, 1811, C. was proclamed ling of Hayti, ly the name of Henri I., aurl solemnly crowned, Jume 2, 1S12. In 1S14, he and Petion suspended hostilities, aud by his power and skill, C. was cuabled to counteract the attempts made ly France to regain its anthority in the island. His avarice and cruelty led to an insurrection, which was aiden by General Boyer, who had succeeded I'etion in 1815 ; and the rebellion having shreal to Cape Town. C.'s deposition was proclamed, at the had of the troons, by the Duke of Dlarmalaite, one of the first dignitaries in the kingdom. Deserted by his liody-guard and nll his nobles, he shot himself, October S, 1820. Me loft a cole of laws, which he ealled the 'Corle Hemi, in imitation of the Code Napoleon.

CHRI'STOPIIER, IERE. See Actal.
CHRISTOPHEf, St, a saint of the Foman Catholic and Greek churches. He is supposed to have suffered martyrdom abont the middle of the 31 century. According to rulgar le gend, $C$., whose name was miginally Aderimos (the Unrighteous), was a native of Palestine, Syria, or Lycia, and a person of prodigious bulk and strength. IIs height was 12 feet. So proud was he of his gigantic frame, that he would serve only the mightiest princes. Having attached limself to one, who weat for the greatest of his day, C. stayed with lim for a short time, but soon discovered that his master was terribly afraid of the devil, in consequence of which, C., with fearless emsistency, passed into the service of the latter. One day, however, whon the devil and he chanced to le walking though a wool, they came across an imare of Christ. 1 lis new master exhihited such perturbation and alam at the sight, that $\therefore$ antirely bost condidence in him, and resolved to find ont the Saviour, and fodlow him. For a long Whike he searclad in vain, lut finally he foll in with a hermit, who showed him ('hrist, and haptized him. C. despised the costmary penances, aud in comsequence, it was imponel nn him to aury Christion pherims on his shoulurs urer a stream which hal mo bride. Oum day, a hitle chide came to the stream; C. took it on hix shoulfors, lut soon began tos sink umber the weight of his lomene. The efilid was Chist himsdf, and to prove it, he commanded

## CHRISTOPHERS-CHRIST'S HOSPITAL.

C. to stick lis staff into the tromed. He did so, and next moning it had blossometl into a palm-tree learing fruit. This mirach convorten] thousands to Christiauity. C's sucress prcitiol the mmity of bamus, the prefect of that regina, wha fint him in prison, scourged him with rimbot ronls, pit a burning hednct on his hooul, and chapend him on a burning stool. C. still remaineol minjured. Mnltitudes of proisoned arrows were now dischargod against him, lut they reloumited from his "hammal limedy, and whe even wounded the frefer himsilf in the cye. U. pitied his tormentur, and frecly offomed his liead to the executioner, that the jurfore might le healed by the bood which shonhl thow from it, This was done, and, as a matter of course, baccus and his family lecame Christians. The (ironk Churelt echebrates his festival on the 9th of May; the Lioman Catholic, on the erth of July.

St (1. was greatly invoked in times of pestilenec, or when pople were digging for treasures, to frighten away the spirits who watened over them. The formula used was called a Christophor's Proypr. He was also the patron of an Order of Moderation, fommed in Austria in 1517, for the purjose of checking cxcessive drinking and swearin:, and which was called the Order of St Christopher.

CIIRTSTOPHER'S, St, or, popularly, St Kitts, an island near the north-east hem of the great arch of the Antilles, 46 miles to the west of Antigua, and 2 miles to the north of Nevis. With a very uncgnal breadth, it is 20 miles long from south-east to north-west, containing about 44,100 acres, and about $2 a, 000$ inhabitants. It helongs to (ireat Britain, and bas a legislature of its own, with in executive immediately sulorlinate to the governor-m-chief of the Leeward gronp, residing in Antigua. In 1857, the revenne of the coluny was 119,399, having been only $£ 363 S$ in 1834 ; so that, muler the system of free labour, it had increased more than fivefold in 23 years. During the same interval, the imports had risen in value from d63,018 to $£ 14,582$, and the exports from $£ 105,267$ to £0 O , 188. The staple exports are sucar, rum, and molasses. The prosperity of the island seems to he constantly progressive down to the latest dates. Elucation is in a promising conlitiom. In $18{ }^{\circ} \mathrm{s}$, 34 schools-averaging 1 school to 2 square mileswere attended by 1459 purpils - 17 of the establishments belonging to the Church of England, 9 to the Moravians, and S to the Wesleyans.

The chicl towns, both of them seajorts with open roadsteads, are Passeterre, defendeel ly Fort Smith. and Sandy Point, protected ly Fort Charles and Brimstone Hill. Of Fort Smith, the exact lat. and long. are $17^{\circ} 17^{\prime} 7^{\prime \prime} \mathrm{N}$., and $60^{\circ} 42^{\prime} 2^{\prime \prime}$ W. The mean amual temperature of these places, and of the cuast generally, is about $\mathrm{SO}^{\circ} \mathrm{F}$. ; lut the mornings and evenings, even of the hottest days, are agreeaily cool. The length of the island is traversed by a well-wooded ridge of volcanic origin, which has in its centre a crater ; and towards the west extremity of the range, rises the nearly perpendicular cray of Mount Misery, with an altitude of 3711 fect above the level of the sea. Over the adjacent Elopes, which gradnally descend to the water's edge, this central range sends down several streams -almost every plantation, in fact, recciving its rivulet in the rainy season. The springs, thonfh munerons, are yet mostly brackish; and indeed the southern extrenity of the island presents a number of salt ponds.
St Fitts, apropriately mamed by the matives "The Fertile Isle, was liscoveral by Columbus in 1493 , and colomised ly the Eaglish in $162: 3$, who were almost immediately joined hy some Freneh adventurers. After treacheronsly and cruelly
extermimating the Carilos, the French amd Freclish, when quarrelines with each other, cultivated difleront portions of the island, till, in 171: the 'reaty of 1 trecht gave the whol th England. In 15 S. during the war of Amprican hampomence, St Kitts way captured ly the l'rench, but fermanently restored in the following year.
('H1R1ST"S COLLEGD, Camlidete, was originally fommend by lleary ble, muler the mame of Goml's Ifonso and was intended ly him to consist
 hewerer, there were only three follows besides the master, whon Laly Margaret, Comitess of lichmond ani berty, mother of benry Vll., 'conatins lare solf, as of the Lancaster line, heir to all limery V1.'s frody intentions,' marle up the fall mmin a, amd rndowed the colleqe biberally, changing its man to Christ's College. Erlwarl Ví. whtel one fellow, ant three scholars: and Sir Johu Fiuch and Sir' Thomans Thines increased the mumer to fiftern. This colleme has also received many rich lenefactions for the cocouragement of stailents, amonest which aro specially to be notieal fome stmmonships fommbal ly Christopher Tancred, worth ax 107 per anmum, and tonable for three jears after taking the dentee of B.A. A student is elected anna:lly lefore coming into residence. Amongst the illnstrions mon connected with this college may be motel Bishop Latinur, Jolm Milton, and Ralph Culwontlo, muthor of the Intellectuat system.

CHにIST'S 110 SPlTAL, Nowsate Strent, London, was fommod on the site of the (iresfriars' Mnnastery, by Elward Vi., June "6, losin, as a hospital for orphans and foumdings. It is usually called the "Thue Coat Schonl.' on acenmet of the" dress worn loy the loys. This consists of al hue woollen goms or coat with a narrow redlather girdle ronnd the waist, yellow lireches, and yollow stockines, a clergyman's hamds at the neck, amd a small bhe worsted cap, but this last they sedione wear, and are gentally sed somis athout bare-healed-such has been the costume of the loms since the formbation of the school in the reghe if Elward VI.; the persistency in it throwh suceessive generations, affording a curions instance of the unchangeablencss in some of the Euchish nsages. No boy is admitted lefure sesen years of age, no after ten, and none can remain after tiiten, with the excrgition of 'ling's hoys' (i. n., those who attend the mathematical school foument hy (harles 1I. in 163:) and 'Grecians' (i. e., the hifiest chass of sclolars in the hospital), of whom 8 are sent on various scholarshipis to the miversities of "xforl and Cambridge. Altagether, alout suo boys ean be admitted. The risht of pesentation is rected in the managing gromors. These are the lord mayor of London, the aldermen, and 10 common conncilmen. liesides these, all noldemen and renthmen who lonetit the hospital to the cxtent of $x^{2} t 00$ are govemors. The manaing goveruons are the patrons of several churches, chiplly in Surrey and Lssex. The must of the income of U. If., which ammonts to abont $\pm 50,0100$, is derimen from legacies sulbecpent to its original charter. King Charles's Foundatina coriched it hy むTO00, with an additional
 yearly ten hoys for the sea-scrivec. Nost uf the Huddine perished in the Great Fire of 1666: 1 out. through the genernity of the corporation of Lamdon, and the liberal hetp of wealthy Enelishmen, it was sonn rehuilt, under the superintendence of "is Christon her $\mathbb{H}_{\text {rem. }}$ In the course of tinm, the new hospital fell into decay, and in 182., a third struc. true was rrected live Mr shaw. The ereat hall of the hospital is a mannifieent room, sreond ouly to
that of Westminster. C. 1I. is essentially a elassical institution, Latm and fireek beinef the basis of elucation: but, to sistisfy the wants arisin! from the changed coudition of socicty, the morern languages, Trawim: \&e, are also taught. In 16ss, the governors hint a preparatory shool at Hertform, where the hospital chalden ane unased ambl instructed till they are ond nonds to enton the hospital. The girle howerer, remain Incmanently hore. It van recuive alomat 400 of hoth sexus. Sicveral eminent persons have lueen elamated at ©. H., such as C'mmben, Stillingleet, Coberidge, aml Lamb.

The date MDC'XVVV1II (Ifis) is that of the year in which the dake was murdered ly Feltoni, at I'intsmonth.

CIIRONOLOGY is the science of the divisions of time. It has two main banches-Mathematical C', and IIstorical Chonology. Mathematical C. is engaged with such of the wits for the measurenuat of time as begin and end with the period of complate evolution of recurring celestial phanomona. Sed artieles Chembar, Yeaf, Month, IMy, and C'rele, where the chisef points in mathematical C: are explained. Historical (: uses these mits among others to measure the distance in point of time between events, and to fix their dates. As in seogap hy amd navigation, longitude is measured from some arbitrary line, such as the meridian throunh Greenwich. so in historical C., dates are fixed by giving their distance from some arbitray point of tme, usually chosen becanse of some remarkable occurrence which sigmalised it. Sueh a fixed point, or apoch, forms the begiminn of an Lixe. It is thus that lefes have been aptly said to be to events in history what the latithule and longitude of paces ire the the faces in geography and mavigation. The mathematieal. or, to sleak more properly, the astronomical units of time alowe referred to have mot lieen, as has been already hinted, the ouly mits nsed in historical chronology. In varly times, the more accorate methouls of mathematics were monown, and such rague perions as 'a generation.' or the lifetime of leading persons in a mation, such as the pristesses of Juno, or of the kings, wore assumed as units in historical chronolngy. The ereat variety of cras, too, in ancient fimes cunfuses the stument of clironology. Thus the era of the (ireeks legau with the year of the first Olympiad, or that in which

 semerations. lis a bery finc argument, the sommness of which has sinee luen sloultat, Vewton set down the late of the Arghantic expedition as lowne

CHRONOMETER, or time-measurer, is the name given principally to such time-hcepers as are used for determining the longitude at sea. The mechanism is essentially the same as that of a common watch; only the size is generally greater, and additional precautions are taken to secure regularity under changes of temperature and other deranging influences. See Horology.

CHRO'NOSCOPE, an instrument contrived by Ar Wheatstone to measure the duration of certain short-lived luminous $p$ phenomena, such as the electric spark, of which the eye itself can be no judge, owing to the persistence of impressions of light on the eye after the cause of sensation has ceased. The phenomenon is observed by reflection in a mirror, in such rapid motion that the image of the luminous object would appear to describe a circle, supposing the luminosity to endure long enough. Should the l'Lenomenon be instantaneous, the image will appear as a mere point ; should it last for an appreciable time, the image will form an are, greater or less, of the circle. The electric spark is found by this test to have no duration.

CHRU'DLA, a town of Bohemia, beautifully situated on a small river, about 62 miles sonth-east of Prague. It is walled, has a noble collegiate church, a high school and Capuchin convent, maunfacture of cloth, and very important horse-markets. Pop. 6000.

CHITY'SALIS, or CERI'SALID, a name origpaly Greek, and strictly belonging to those paine of butterflies which are adorned with golden spots, but extended to the pupa of lepidopterans insects generally, and even of other orders of insects. The chrysalid of lepidopterous insects are enclosed in a somewhat horny membranous case; sometimes very angular, sometimes nearly round; generally pointed at the abdominal end, sometimes at both ends; and before the caterpillar undergoes its transformation into this state, it often spins for itself a silken

boron, with whits oath amd other foreign substress are smmetinm mixed. se as to morose its size, sum within which the chrysalid is concealers. "hrysalits at wo often suspombliy cords, and querally roman meaty at rest; some have the power of burying themselves in the "orth; others are home by a singly silken thread which passes rom m that middle (see cat) ; some twirl themselves
round when touched, or when the stalk or leaf to which they are suspended is torched; and in general, they give signs of life, when disturbed, by violent contortions of the abdominal part. See INsect Transformations; Pupa; Lephoptera; Butter1'Li', Hawk-Motil, Moth, and Silkworm.
CHRYSA'NTHEMUM (Gr. gold-flower), a genus of plants of the natural order Composite, suborder Corymbifere: having a hemispherical or nearly dat involucre, with imbricated scales, which are membranons at the margin, a naked receptacle, the florets of the disk tubular and lemmphrodite, those of the ray strap-shaped and female, the fruit destitute of pappus. The species of this genus are annuals, perennials, or shrubby ; and all have leafy stems. They are natives chiefly of the temperate parts of the old world.

Chrysanthemum. leucanthermum, the $0 x-$ eye, or Ox-eye Daisy, is abundant in fiches, meadows, and grassy places of woods, in most parts of Europe. It has large flowers, with white ray and yellow disk. It is often a troublesome weed among hay and in pastures: being peenrial, and having a creeping brittle root-stock, it is not easily extirpated. It is common in Britain, which has only one other native species, C. segotum, Cone Marigold, a ferequint weed in cornfields -although rare in the weighbomhood of Edin-burgh-an annual, with large deep yellow flowers. It is dealt with like
annual weeds in general, by pulling it when young.- Co. carinatum, an annual species with white ray and dark-red disk, the scales of the involucre keeled, a native of BarMary; is frequently cultivated in greenhouses orwhere the climate permits-in flower-gardens. The favourite species of the gardener is, however. C Indium, the Chinese or Indian C., a native of China, Cochin-China, ant Japan; which has long been cultivated in its native countries as an oramental plant, and of which there are many varieties. Its colours are also very various-red, lilac, rosecolour, white, yellows, orange, or two colours combind. It flowers in autumn and winter. It is easy of cultivation, succeeds lost in a light rich soil, is easily propagated by cuttings, suckers, or parting the roots, but requires the green-house in Britain. It was introduced in 1759. It is reckoned among florists' flowers.

CHRYSELEPINANTINE (Gr.; from chromas, fold, and clephas, ivory), the art of making images of gold and isar, was extensively ${ }^{\text {ramtised }}$ amongst the Greeks. Winclelmam has calculated that about 100 statues of this lind are mentioned by the ancients. The colossal works exerted by limidias at Athens, in the time of Pericles, are the most famous of this class, the greatest being the 1'allas of the l'arthemon. It was 2 ed cubits high, and represented the godless in armour, covered with a long robe. The famous Olympian Jupiter of Phidias, exerted in the same materials, was also a world-wide wonder. The combination of gold
and ivory was chicfly uscel in temple statucs: and though the execution of the mone fampos worlss of this elass belongs to an advanced period of art, the nse of varions materials in the same statne was rery ancient, and probally bormwel from the custom of alorning the wooden imanes of the earliest time with the precions metats. Sometimes, 1 mm , the lead, the arms and hands, and the feet were of marble, whilst the rest was of wood, covered with thin plates of gold. These were called Acrolites (rerolithoi). Sce Statuari.

CllRYSIPPUS, an minent Stoic philosopher, was born abont :30 8. C., at Soli in Cilicia. He came to Athens when still a youth, and cagerly addicted lamself to philosophical pursuits. His prineipal master was Cleanthes, although he is said to have also studied under the acalemic teachers, Arcesilians and Lacydes, and learned from then what were the ohfections urged by sceptics against the doctrines of the Stoies. He had the repatation of lowing the keenest dispmant of his are, and was happily described as the knife for the acadomic knuts.' In fact, his logic was beld to be so convincing, that people were wont to say: "If the grols make use of dialectic, it can only be that of Chrysipmas." It is also rehated of him, that he told Cleanthes he naerely wanted to know the principles of his system, as lie intended to find arguments for them himself ; and this story appears to indicate his true prosition in philosophy. He was not the creatur of a new system, but the expmunder of an old. U.'s industry was very great. 11e sehlom wrote lews than 500 lines a day, and is said to have composed more than 700 works. Many of these, however, were compilations, and were not characterised hy great beauty of style. Only a varicty of fragments remain, which have been edited by letersen (Philosonhice Chrysippece Fundamenta, Altona and Hamburg, IS27).

CHRY'SLs, a Limnean genus of lymenopterous insects, now constitnting a family Chryside, allied to the Ichneumonider, and furning a connecting-link between them and bees, wasps, \&c. The Fronch call them eiuepes dorces (gilded wasps), and they sometimes receive the Enrlish names of Goldenbuiled and Ruby-luiled Flics. They delight in sunshine, and may be seen prised in the air - the motion of then wings being so rapid as to render the body alone of the insect visible.

CHRY'SOBERYL, a gem almost as hard as

Right rhomboldal prism; primary form of Cbrysubersi.

A crystal composed of six twins, grouped together laterally, which in transmitted light appears red. Froni Siberia.
sapphire, and the finer specimens of which are very beautiful, larticularly those which exhilit an
opaleseent play of lipht. Lapirlaries sometimes call it ariental or onalament chrysolite. It is of a meen colone, inclinisig to yellow, semi-transparent, or alumst transparent, and lats double refraction. It necurs erystallised in six-sided jrisms; ofton in maches, or twin crystals. It is fomad in granite, in siunlstome, and in allavial suil; in Ceylon, l'egt, Silowia, Juaril, and Commectiont. It is comurnsed of almamin, flacita, and a little protoxide of iron; the :chminia fumber ibout 50 per cent. of the whole.

CLIDSSOCO'SIA, or COPDER-GliEPN (Gir. gold-aluc), an ore of eopper, foumd in Cormwall and in many furts of the world, lat partionlarly in Wisconsin and Missomi, where it is so ahmondat the to be workme for copper. As a pigment, it was much nsed by the ancients.

CHIRY'soLITH (Gir. golden-stone), a mineral composed of silia, magnesia, and grotuxide of iron ; of a tine grech colonr, with vitreous lustre; transparent, and having donble refraction; in liardness, about equal to quartz; and with conchondal fracture. It often crystallises in furresided or six-sided jrisms, varionsly moditied. Very tine surcimens are brought fron ELgyt and from some parts of the east, also from Brazil. C. is used hy jowellers as an ornamental stone, but is not highly valued. Olivine, which oecurs generally massive, in grans and roundish preces, and is frequent in voluanic comatries, and fond in the igncolss rocks of stme parts of scotland-as on Arthur's Siont - is recariled as a coarse variety of chrysolite.-The Chrysoburyl (4. w.) is sometimes called C . by jewellers.

Chleysolotras, Mavuel, a learned Greek of Constantinolle, was form in the midule of the Jth century. He is regarded as the lirst who transplanted Greek literature into ltaly. Abmit the year 1391, the Byzantine emperor, John Palaolozas, sent (! to England and Italy to entreat assistance against the Tuks. This mission made C. known in Italy, and, in 1397, he left his native land and went to Florence, whore, as teacher of Greek literature, he was highly estemoed and admired. Leonardo liruno, loggins, Phikelphes, Guatinus if Terona, and othor eminent schohars were puinils of his. He was afterwards emplyyed in public services-especially in merliating a muion of the Greek with the Liman Church-by Ione Gregny XII. In 1413, C. went with John XXII. tu the conncil of Comstance, where he died 1415. Besides theological works, his Protematu, or' 'Accidence of the Greek Lamange' (Vewice, 1454), has been presersed. Mannel C. must be distinquished from his nephew, Juns Chmsoloras, who also went to Italy and gave lessons in Greel.

CHRYSOMELA and CHRTSUMELIN.巴. See Goldex Beetle.
chrysophydium. See Safotacee, Moneala Barf, and star Apple.

CHRY'SOPRASA is merely a varicty of chalcedony, but is valued fir above common chatedny as an ornamental stone; so that a stone of this kind, fit for munting in a ring, is worth from $\pm 10$ to ${ }^{2} 00$. It is of a tine apple-green calour in chaice specimens, but inferin ones exhilit wher shates of green, and it is somctimes sputted with yellowishDrown. It is often set in a cirelet of diamonds or pearls. Cufortunatuly, it is a to to lose its columr ihrough time, partioularly if kept in a warn phace: lat dampmess is facouraile to its preservation, and it is thercfore sometimes lept in damp cotton. It is found in Lower silesia-where the search for it was particularly encouraged by Frederick the Great-and in termont. The inferior sjecimens are made into brooches, neckiaces, \&c.; and those

 golikn-mouth; so named from the splembom of his eloquence), was bum at Antioch in 347 A. I. His mother Anthasa was a pions woman, wholly devoted to her son, who grew up under hor loving instructions into an earnest. gentle, and serions youth, passing thromen, as Jeanter significantly observes, nome of those will, dark struggles with sinfal passimes which left an inetfaceable impress on the sonl of Angestint, and grave a sombe colouriner to his whale theolors. He sturbed oratury under Libsuins, a leathen rhetorievian ; soom excelled his teacher : and, after devoting some time to the stmly of mhilosolly, retired ton solitary place in syria, and there reat the IFhly Seriptures. The ascetic severity of his life and studies brought on an illness which furcel him to return t. Antioch, whore he was ordained duacom hy Bishon Moletios in 3sl, and fresbyter by Bishop Flavianus in 386 . The toquence, earmestness, anit practical tone of his preaching excited the attention of Jows, beathens. and hereties, and securcal for him the reputation of the chief orator of the Eastern Church. In $: 397$, the eumuch Entropius, minister of the Emperor Arcadins, who had been struck hy the bold and lrilliant preachines of $C$. elevated hime $t$ the episcupate of Constantinople. ( $\therefore$ inmediately began to restrict the eprisopral expentiture in which his predecessors had inmblerent, and hestowed su large a portion of his revemaes on hospitals and other charitics, that he waned the sumame of "John the Almoner. He also endeavonren to refonn the lises of the clerers, and sent missionaries into Seythia. Persia, l'alustine, and other lanls. His faithfal diseharge of his daties, especially in reproof of vices. exciterl the emaity of the patriurch Theophilus and of the bmpress Endoxia, who succeeded in deposing and hamishing him from the cajital. He was sum recalled. to he banished acain shortly afterwards. He now went to Nicea, in Bithynia: lont was from thence removed to the little town of Cuensus, in the desert parts of the Tanmes Dlonntains. Even here his zeal was not abated. He laboured for the consarsion of the J'ersians and (roths in the neighbourhook, and wrote the serentern letters (an mather momal essays) to olymuias, to whom he also alloressech a treatise on the rend $^{\text {rasition - "Nome ean hurt the man who }}$ will mut latrt himself.' 'Jhe empnour, entaged by the general sympathy expressed towards (1) ly ail true 'hristians, wave orders that hos should he more remotely banished to a rlosiante tract on the Euxine, at the" Ury wroe of the Eastem Romnan empire, Acorrlinely, the olel man was male to travel on foot, am with his bare hedel exposed to a hmyning sun. Theis cruaty proved fatal. C dierl on the way at Comamm, in fontus, Surtember 11, f18 A.11., hlescinir fiml with his dying lips. himself publicly imploring the pardon of Heaven for the crime of his parents. Arcatius and Eudoxia. The Greek 'hurch celebrates the festival of C . on the li3th of November ; the Fioman, on the arth of Junuary. In hus Ifomilies (Thomas Arpumas said he wonld not give in exchange those on st Matthew for the whole city of Paris) C. disulays superior powers of exegesis. In general, he rejects the alleErical systen of interpretation, and adheres to the grammatical, basing his doctrines and sentiments on a rational aprehension of the letter of Seripture. He is, however, far from being a bilholater. The recomised the presence of a hmman element in the Bible as well as a divine: and instead of attempatin, by forced and artificial hypotheses, tu reconcile what he thourht irreconcilable in Scripture statements, he frankly admitted the wistence of contradictions, and shaped his theory of inspiration accordingly: Sut his greatest and noblest excellence lay in that yower, springing from the fervour and holiness of his heart, ly which the comseipnces of the promb, the worldy, and the motligate wor awakened. and all were made to fece the reality of the grosul messare. The surname ( $:$ was first applied some time after his death, amu, as it is surluserl, ly the sixth cecumenical conncil in 6s0. C's womks are very mmmerous, and consist of, lst. Homilies, on parts of scripture and prints of doctrine: ©l, Commentaries, on the whole Eible (jant of which has perished); 3d, Epistles, addressed to various pople; 4 th, Tratises, on different subjacts (snch as Prorilence, the Priesthoot, \&c.) : and sth, Lifmific. Of these the most valnable. as well as the most studied, are the IHomilise which are hell to he superior to everything of the kind in ancicnt christian literature.

The most correct treek edition of C.'s works is that by Henry savil ( 8 mols. Eton, 1613) ; and the most complete Cireck and Latin edition is that by Montfancon (1:3 sols. Par. 1718-173s; repubhished in $18: 181840)$. 'The lrest anthority in regard to $C$ '. is Neanler, who, lesides treating of lis life and lalwors in his Kirhmgrschichte, has published a life of this eminent Father.
('HRY'SOTYPE (ir. chrygos, gold ; tupos, im. pression), a photographic mocess invented by sio John J Perscbel, athi ilepending for its success on the reduction of a persalt of iron to the state of protosalt by the action of light, and the subsequent precipitation of metallic gold upon this protosalt of irm. The process is conducted as follows: Cood paper is immersed in a sulution of ammonio-citrate of iron of such a strangth as to dry into a good rellow colour, withont any tinge of lrown in it. It is then exposed to linht undom a merative until in fant impurssion is olotaned. A neutral solntion of chloride of rubll is then hroshed over the paper, when the pieture immodiatoly appoars, and is rapidly developal to a purple tint. It slomld then be freely washed in several changes of water, fixed with a weak solution of iodirle of potassinm, again thomaghly washorl, ame dried. The action of the incline of potassium is to comvert any maltererl chloride of gobld into a sulublu double iontile of frold amt potassimm, thus rowdering the picture pumament.

ClIURCH, a word which signifies either a place of Christian worship, or a collective boxy of bhritian people. lt is, in all probalility, derived from the Greek notjective Rymiokion (from kimios, lomid), the place of worship having been called the Lomel's house and the worshiphers the Lorel's frophe. The Reottish kirk, the Gernan kirche, \&e., are inerely dilferent forms of it.
 lave already explainel that the carliest ecclemation structures of the Clnistians were copiod or adapted not from the beathen or Jowish tromples is might have been anticipated, lout irum that juculiar comhination of a ball of justice and a market-place to which the name lasilica was riben by the ancients. The reason of this selection is pronstily to lee fomm, not so much in the spirit of nh? wition which no doult existed inetween Cluristiams amd hathens, as in the essentially different conceptions which they formed of the character and dijects of puldic worship. The rites of heathondon were performal exclusively by the priest. the promle remaining without the tenigle; and the tomple itself, which was lighted only from the door, or hy the fow lams which lourned aromen the image of ine what, was resarided not as a receptacle for worshinurs, but as the abode of the deity. The dark mysterions character which thus lehomged to it, renderel it equally unsuitable for the perfarmance of hturgical sorvees in which the people were to participate, ant for the chelivery of those pullie mhluesses which from the beginining were employcu as a means of Christian teaching and exhortation. To such purposes the prator's courtroom, with its surroundings, were readily alapited,
by the few simple alterations which we have described in the articles referred to. Hut the basilica, as thus altered, was a mere utilitarian structine. It servel the pupposes of Christian worship, but there was nuthing in its form which responded to the feeliugs of Christian worshiphers or tended to awake Christian seatiments. Now, the Cross (9. v.) had been used by Christians from a very early periol to indicate their allegiance to the anthor of their salvation and the object of their faith; and gradually it had beeome the distinctive emblem of Cliristianity. Nothing, then, conld be more natural than that when it became desirable to give distinctively Christian characteristics to what hitherto had been a beathen structure, this should be effected by such a modification of its form as should convert it into a representation of this sacred emblem. Nor dil this alteration lead to any very extensive change on the form of the U., as it had hitherto existed. The basilica, as we hare alrealy explained, not unfrequently had side entrances, either in place of, or in addition to, that from the end. All that was requisite, then, to convert the simple parallelogram of which it consisted into a eross, was, that at each sille of the buidding these entrances, in place of direct commonications with the exterior, should be converted into prassages, or arms ruming out at right angles, and more or less prolonged, according as the olject was to attain the form of a Greek or of a Latin cruss (see Cross). If the C. was to be un the form of a Greek cross, the arms were made of the same length with the other two portions into which they divided the buiding; whereas if the cross was to lie a Latin one, the portion of the buidling which ran towards the west was made considerably longer than cither of the others. In either case, the arms running at richt angles to the C., and directly opmosite to each other, cut it across, and thus obtained the name of transepts.

The external fom of the C . being thins indieated, we now proceed to explain its internal arrangements, and to eummerate the various aljuucts which in cathedrals and others of the larger chuches frequently sprang it around it.

Over the point at which tle arms or transejts intersect the luoly of the cross, a central tower or spire is very frequently erected. From this central tower, or, if the tower or toteres are situated else.
Church: $\mathrm{C}=$ Choir $; \mathrm{N} . \mathrm{T}=$ North Nore, from this central point, Transept; S. T. = South the portion of the building 'Transept; N. = Nuve. Which runs westwarl, to where the Galilee or entrance chapel, or, in rother instances, the great entrancedoor is situaterl. is calle+l the Nave (from notris, a ship), whilst the fontion which runs eastward to where the altar, or hich-altar, if there be soveral, is I bacol, is callud the Choir. In the larger and nome fonuplete churelos, the nave, ane frembently also the hoir, nee divire d longitulinally liy two rows of pillars into three prortions, the protion at "ull sill" heing generally somewhat narower and lan lafty than that in the centre. "Ihese sible I"rtions an villed the aisles of the nave, or of the: choir, as the mase may be. In some elmeches, the aislus merentimed alones the triansepts, thas rimnine fonmel the whole ${ }^{\prime} \cdot$; in others, there are Jemble absles tu the nav", or to both nave and
 or to the east uf the choir, is siluated the ladye's Chapro, "r Chapel of the Vivin, with sometimes a
number of altars; and it is not unusual for side chapels to be placed at different places along the aisles. These usually contain the tombs of the foumder, and of other benefactors to, or digritaries connected with, the church. The extent to which these adjuncts exist depends on the size and importance of the $\mathbf{C}$., and they are scarcely crer alike in two churches, cither in number, form, or position. Vestries for the use of the priests and choristers generally exist in connection with the choir. Alone the sides of the choir are ranged richly orzamented seats or stalls, usually of carved oak, surmonated? with tracery, arches, and pinuacles; and amongst these seats, in the case of a bishop's church, the highest and most conspicuous is the so-called cuthedra, or seat for the bishop, from which the cathedral takes its name. The larger English cathedral and abbey-churches have usually a chapter-house attached to them, which is of various forms, most commonly octagonal, and is often one of the richest and most beautiful portions of the whole edifice. On the continent, chapter-houses are not so common, the Chapter (II. v.) being usually held in the cathedral itself, or in one of the chapels attached to it. Cloisters (q.v.) are also frequent, and not unusually the sides of those which are furthest removed from the C. or chapter-house, are enclosed by other buildings connected with the establishment, such as a library, and places of residence for some of the officials of the cathedral. It is here that, in Roman Catholic churches, the hall, dormitories, and kitchens for the monks are commouly placed. Beneath the C. there is frequently a Crypt (q. v.). In some cathedral churches, the crypt is in reality a second underground C. of great size and beanty. The Baptistery (q.v.) is another adjunct to the $C$., though frequently forming a building altogether detached. Most of the parts of the $U$. which we have mentioned may be traced on the annexed ground.plan of Durham Cathedral ; lut it must not be supposed that their position is always that which is there represented. The position of the nave, choir, or chancel, aisles, ams trausepts are nearly invariable, but the other portions vary, and are scarcely alike in two churehes.
Churches are of five classes-metropolitan, catheIral, collegiate, conventual, and parish churehesand of these the first are, generally speaking, the most, and the last the least elaborate. In ordinary language, any lmilding set arart for religious ordinances is called a church, though when of a minor kind it is more usually designated a chanel. After a long period of neglect and poverty of taste, the building of churches in a superior style, emulative of the older styles of architecture, has greatly revived, not only as regards the Clureh of England, but the Church of Scotland and nearly all dissenting borlies.
As applied to a eollective hody of Chistian people, the word $C$ : is the translation and equivalent of the Greek worl ecclesio (Lat. erclosice, Tr. église), usel in tise New Testament. It is common amon! rrotestants to distinguisl betrseen the risible and the imisible C.-the invisible C. consisting of all those who are saviacty or spiritually mited to 'hrist, that is, of ali true helievers; the visibl. (. consistins of all who profess the religion of It sus Christ. liman Catholics do not in the same manmer ackowladge the distinction between the visible and thu: invisible C., hut rearad a connection with the herarchy, and consequmb participation of ondinances, as estahlishing a emmetion with the tric 6 . and with Christ. F'rotestants regari the C . as sulbisting from are to age, in virtue of the anthority of Christ, and through the faith of individual beliovers and their confession of him: Roman

## CIIURCII-CHURCH-DISCIILINE.

Catholics regard the apostolical shecession of the hierarchy, and the regular :uministration of the sacraments, as essential to tho continumi existone of that Catholic or mivirsal \%: which Christ pianted on the earth, and the existrace of which he has pomised to mantain throughont all ages. Protestarts,
in general, regard tho 8: of Rome and the Greck C. as formin's part of tho visible C . of Christ; bat laman Catholies are not accustomed to make a corresponding aluassion with respect to the Protestant churches. From the hierarchical frinciple of the C . of Rome and of tha Greek C ., results

Ground-plan of Durham Cathedral.
an employment of the term C. to designate the hierarchy alone, which is contrary to the minciples of the Tieformation, although a tendency to it may he observed in some Protestant churehes. It has been usual for Protestants to designate by the term C. the collective bouly of Christians in a particular country, distinguished by the name of that comentry; the greater number of Protestants (Episcopalians and Presbyterians) believing that such a portion of the universal C. may warrantally be associated under a common government; and in countries where religious liberty exists, diversities of opinion on points of doctrine and C. government have given rise to the existence of separate Christian assuciations, distinguished by names generally indicative of some of the peculiarities which characterise them: but these, however much they may differ on many points, do not in general hesitate to recognise each other as belonging to the umiversal visible C. of Christ, whilst they retain in common the same great first principles of the Christian faith, and particularly the belief in one God and in the three persons of the Godhead, the incarnation of the Son of Goll, the atonement by Jesus Christ, and the work of the Holy $S_{p}$ init. The term U., however, is regarded ly independents (q.v.) or Congregationalists, as more strictly applicable to those who are united as worshippers in a partietuar phace of worship, partaking of the Lord's Supper together, and exercising discipline and C. government amoner themselves.

ChURCH, States of the. See Paral States.
CIIURCII-DISCIPLINE (Disciplina ecclesiastica) includes all the means employed by the

Christian Church, besides the ministration of word and sacraments, to secure on the prart of its officebearers and members a faithful adherence to their profession and a corresponding hamelessuess of life. It rests upon the anthority of Christ, and at the same time necessarily arises, in sume form of it, out of the very constitution of the church as a society. Among the early Christians, it soon asswned forms of great severity towards offenters, especially towards the Lapsal (1. T.). At a later period, the discipline of the church was chiotly exercised with respeet to persons accused of heresy and schism. The penances of the Church of Rome have lons formed an important part of its discipline, and therewith its Infulgences' ( q . v.) are clusely connectert, as well as its loctrine and rule of Auricula (Onfussion (see Cosfession). In the Protestant churches, public confession of sins ly which publie scandal has becn given, and submission to pullie relnke, are sometimes requirel. I'ractices more analogns to those of the mimitive church were established in many churches after the lieformation, but in general have fallen greatly, or entirely, into disuse. The power of exchnion from the Lorizs supper, and from the lights and mivileges of church membership, is, however, gencrally retamed and exercised, until, hy profession of repentance, and by reformation of life, the cause of such exclusion is removed; and ministers or other office-bcarers are, uon offence given in their doctrine or conduct, suspended from their functions, or altogether deposed from their office. The exervise of C. D. belongs more or less exclusively to a hierarchy, or to the office-bearers
assembled in chnrel-courts, or to the memhers of each conmrecration, according as the church is Episcopalinu, Fresizyterian, or Indepement in its church gevermment. There is an increasing tembtoncy amoms ('bristians in rencral, to scratinise clusely the chm of riflat to exercise C. 1), and the linits within wheh it may be exureised.

 the Withmagnonto in lold, in lithelred's tim", have been quotal in prom if tha recongition of this rule ly win sixon fathers. It sormen to have been their custenn, also, to dewote to the rapar Nif weh churele a portion of the fines prant for
 it; and "xay hishop was bonml to contribute to the repair of his own chureh from his won means. I thich of the tithes thus arimally deretmel to the repaiss of charches, continucil to be apption to that purpuse under the Nommans, flown to the mishello of the 1sthe e. a and the manner in which this lmainn rame to tee shiftel to the parishiomors, has been a subject of much discussion amon", leral antiguaries. Lord, then Sir John, Comprell, who published a pamphlet on the subject in 1837 , is of cmion that the contributions of the parishomers wew at first pracly voluntary, and that the chstum growins, it at last assumed the form of an obligation, and was raforeer by ecelesiastical censures. The rare of the falyic of the church, anl the rue alministration of its ollices, are lail upon the ministers and the churchwardens conjontly, and the latter may le imbeednl agimst by citation, in the ecclesiastieal conits, should they neglect these duties. But there is mo lual mox of compeling the parishioners as a lomly to jrovinle the rate; anl this circumstance has nea. sioned much dificulty in imposing the tax in parishes in which dissent is preralent, and led to many churehes falling into in pretially minous combition. The proper criterion for the anount of 6 . A , is a valuation of the property within the parish. gromencer on the rent that a tenant wond be willin! to pay for it. Glebe lanil, the $l^{\text {mosserssions }}$ of the cronne in the actual occuration of the soverein, and blawes of publie, whship, are not liable for C. Li. ; but there is no nther exception as regants immorable 1 menerty, aml in snme parishes, custom even extenls it to stock in trade. It has been often deciled in the courts that a retrospective church-rate-i. es, a ratu for expmses previnisly ineurred-camot le valinly imposed. Much ditliculty has been experienced in rerovering the rates imposed lyy the parish on indiviluals refusing to pay. Previons to 53 Geo. 111, " 127 , the only mole was by suit in the ecclesiastical comrt. That statute, however, in all eases maler £10, empowereal the justices of the peace of the county whare the chareh was situaten, on complaint of the chureh-warlens, to imquire intu the merits of the ease, and oriler payment. Against the decision of the justices, an appeal lies to the puarter-sessions. Several later statutes, having for their object the promotion of chureh-building, have extendent the common-law powers of chureh-wardens. There are fow social arragements in Jingland that have lew the cause of greater irritation than that by which the duty of providing for the maintenanee anil wair of the clurches of the estalbishment is thus lad equally upon its members, and upon the members of the various dissenting hodies which everywhere abound. Since the first bill for the alolition of C. R. was introluced ly Lord Althorp, as Chancellun of the Exchequer in Lord Grey's gevermment in 1531, scarcely a session has passed in which sume

thorough reprolncy has naturally, though unfandy, lea to injustice heing done to his poetical abilities, which were very considerable.

CHURCHING OF WOMEN, a religions nsace prevaihor in the Christian Church from an early perion, of women, on their recovery atter child. bearing, groing to ehurch to give thanks. It appears to have loen borowed from the Jewish law (Lev. xii. 6). In the charch of the early ages, it was aceompanied with varions rites; and in the Church of Rome and Greek Chureh, it is inpurative In the Church of England, also, a serviee for the C. of W. finds a place in the Liturgy. By the Presbyterian and Independent churches of Eritain, it is rejected, as having no seripture warrant.

CHU'RCHYARD. Sce Berlal, Cemetery.
CIIURN, a machine for agitating milk or cream for the production of butter. The principle of the operation is consilered in the article on Butter. Of the great varjety of furms that have been given to the machine, it is very dificult to determine which deserves the prefurence. It is whions that the more thorongh ani uniform the argitation, the wore completely will the latter le separated from the milk. The consistency and colnm of the lintter are also elements in julgiug of the relative merits of churns. The temperature of the air and the milk affect the lutter in these respects. During smmmer, that of the milk should not exceerl 62 , and in very bot weather may be muler $60^{\circ}$. During cold weather, the milk should be alwat $2^{3}$ higher when put into the churn. The speed at which the operation is performed also inthences the result.

## Anthony's American Atmospheric Cham.

Trials instituted to test the relative merits of chums have failed to settle which is the best form for actual use in the dairy; for the same mathine mulur different conditions does not always yinl the same result. The ollest form is the in uitht or phemg churn. There is a general pre julter in faverr of this form of C , m the uromm that the bettre is more comphetrly soparated and of In ther quality. Its great defeet is that the operation. boing monerally lerfommed hy hami, is fotiguing bewent improwments have chiefly amed at oase in workine, abd a saving of time. The witinal borret (\%, with a ratatury motion, like a mimptome, which motion was ruersid wery few roumds, las fallon
 An imprownent on the barel (c. was the making of the larrel stationary, the milk hemg agitated by int rasal appuatos fixal on a horizontal spindle Whid is turned ley a wind haman. liarrel churis, vennetimas of ministur sizn, in ennerally ased in larors dairing in Ildiant. For small or mederatc-

Churns on a centrifugal action have also lieen successfully nsed, particularly in Sweden. Nore recently, chums of a barrel form, with an nocillatines motion like a child's cradle, lave been introducel, but without any decisively superior results.

To all forms of chums, jower other than monnal can he, and is applier. In some parts of the contiment of Europe. and in America, the dog is employed in chmoning ly means of a contrivance like a squirrel's hox. Horsepower is in very gencral nse in large lairies in (rreat Britain. In very exceptional cases, stean-power is used.

CllU'RRUS, Sce Memp.
CHUSA'N. an island on the east coast of China, 40 miles north-east from Ning 10 , in $30^{\circ} 40^{\prime} \mathrm{N}$. lat., am $121^{\circ} 45^{\prime} \mathrm{E}$. long., of an oblong shape, and abont 50 miles in circumference. It is mountainons; but has many fortile valleys, with a plentiful supply of water, and is very carefully enltivated by the hardy and independent people by whom it is inhabited. Mr Fortune was struck with the richness of its fiora. Azaleas clothe the momatains; elematises, ruses, and huncysuckles grow in great luxmiance. The camphor and tallow tree, and many varieties of bambon, are found in the valleys. Tea is cultivatm to some extent on the hill-sides. For threefourths of the year, the climate is temperate. June, Inly, and Ausinst are the loot months. In August, the themoncter aworases $8 ?^{3}$, hat in January and February it is often as low as $20^{\circ}$. Ting hai, the earital, a walled town abont two nules in circumference, containing a fine specimen of Butdhist temple-architecture, surrendered to the British forces, July $\tilde{3}, 1840$, and was retaken by them (hasing been evacuated the previous Pebruary) October I, 1StI. At the close of the war, the island was deliveren up to the Chinese. In IS60. it was again occuried by British troops, but, by the convention of I'ckin, is to be eracuated.
CIIUSAN ISLANDS, a group of islands scat. tered rom the one described above. The most remarkable of these is the sacred island of Pu-tn, lying east from Chusan. It is covered with Luthist temples, paronlas, and monasteries, which latter are inhabited by a great mumber of Bonzes, als the Chimese priests are callen. The island is cevoted exclusively to religious purposes, and no layman is allowed to reside apon it.

CHU"TNEE, or CHU"TNY, an East Indian condiment, very largely used in India and to a consilerable and increasing extent in Great Britain. Indian U. is a compmond of mangoes, chillies or capsicum ( $q . v$. , and lime-jnice with some portion of other native fruits, such as tamarinds, \&c., the thavor being heightened ly garlie. It is sometimes manufacturel fir sale in Enyland, but not in any quantity. Families necasionally make it for thoir own nse, and cmploy the following ingreclients: Chillies, I- $1 \frac{1}{2}$ lh. ; mples, I the: rim famarinds, $\because \mathrm{Dbs}$ : sugur-andy. 1 ll ; fresh Ginger root, $1 \frac{1}{2} 11$.; surlic, 1 H. ; multana raisins, I 1 b. fine salt, I lh.; ilistillem vinegar, 5 buttles. The chillies are to be sonded for an hour in the rincmar, and the whole monnel with a stome and muller t" is paste.

Cllvid. The fond underges varions changes in the alimuntary canal, whicll will lee fully noticed in the artich on burmatos. One of these changes is its conversion in the stomath intu a pulpy mass tommet cheme. The chyme, which passes onwam info the sinali intestine, is acter? umon by the life, phareatic fluid, and intestinal juice, and through
their infuences is separatere into the chole, which is absorlred or sucked up, by the luctoals (q. v.) and into matters unfit for nutritun, which nltimat"ly fiml their waty out of the system loy the intoretinal canal. 'lowe mode in whinh this motritions ( C . is taken my by vessels distrilnitid uver tho small inters tines, amd the changes whinh it moleremes lufore it is converted into true lobol, are desembed in the
 We shall hare morely notice its loialiner physioul amd chemical propertios. When ohtaind from the thoracie duct of an animal that has heren killad
 cially if it las taken fitty fool), the $($ is a white, milky-looking or prollowish duad, with a funtly alkaline reaction. Jike the blool, it coargulates in abont ten minntes after its ahstraction from the lnoly of the animal; and in abont three hours at small but distinct gelatinons clot is separated from the serous luid of the chyle.

On examiniug $C$. under the microscope, we find that it contains enormous mumbers of minute molucules (probahly consisting of fat), together with nucleated cells, which are termed the chyle-rorpuscles, anel are apparently identical with the white or colourless lobor-cells. 'The chemical constitnents of $C$. are much the same as those of hloorl; filmin, allomen, fit, extractive matters, and salts beimg the most imprortant.

CIOA'DA, a gemms of insects of the orilu v /Ifmiptro. sultorder Ilomuptera, remarkable for the somonds which they emit, the loudness of which is very extra. wrliuary, when consilered with reference to the size of the ertathres protneing them. Thw largest European specica are only about an inth lones. The elytree, of wing-carers, of the acadie are almost always transparent and vemerl. Thery [wetl on slambs and trees, of Whith they suck the juices. The male unsects alone 105 sess the organs of sommel perfectly developed. These are in noway comocted with the montl or throat, luyt may le described as a musicial apparatus on the under side
 of the abumen. This appantus is very complicated, consisting of a sct of membranes and fibres commecten with powerfal museles. The snmm ena be frombed even after the insect las been lon!r dead, by pullinar the fibres, and letting them escann. Cicadas are most eommon in tropical and warm temperate rosions, and are sarrely known in lintan, althongh one or two species have been fonnd in the south of England. The ancirnts regraritol the sommls of these insects as types of music amb elogumee. In some countries they lene manes whicl symify that sleep is hanished by their Tin. Tha smmits produced by some of the South American speciex. Which are much larger than the Luropean, are houl enough to be heard at the listance of a mile, and liave been likened to the smmul of a rizur-rrinder at work. The Greel name of the $C$. is tettis, often erroneously translated
frasshoprer. These insects have indeal no resemblance to urasshoprers, aul no power of leaping. C. is the lath name. The monern Italian is ciorefe the French ciymb. Byron speaks of the "shrill cicalas.'

CICATRISATIION (Lat. cientrie, a scar), the pocess of healing or skinning over of an ulcer or lraken surface in the skin or in a mucons membram by which a filmous material, of a dense resisting eharacter. is sulstituter for the lost texture. The now tissue, in such a case, is called the cicatrix. ami usually resembles, to a considerable extent, the strncture which it replaces: it is, however, less clastic, and from its shrinking in volume, sometimes prorluces an aprearance of puckering. The glamis amb other special structures of the orimal tissue are wating in the cicatrix, which, howerer. performs perfectly well, in mont instances, the oflice of protection to the parts lolow the surface. Nex 1aflamyation and Uhatathos.

CI'CDLY (Amotis), a cenus of umbelliferons plants, nearly allipd to Clis ril, of which me specjes, SWeET C. ( $M$. olurator), is common in the central and senthern parts of Guron", ame in similar climates in Asia, lout in Britain is so genorally found near human halitations, that it apuars jwhally to have been introlucel. It is smmetimes callid Shect ('hereit, and in Sootland Myrch. It is a hranching lermaial, two fieet high or upwards, with large triply pimate laves and limatitin leatlets, somes what downy lemeath; the iruit remarkable for its lare size, and, as well as the whole plant, powerfully fracrant, the smoll resembling that of anise. The seeds, rocts, and young lpaves are used in (remany and other comentres in somps. \&e: The plant was foumerly anth in use as a merticinal arnmatic.

## C'CER. See CHAR Pra.

clecero, minets Trelics, the ereatest arator of liome, amb one of the most illustrions of her statesmen and men of letters, was bom at Arpinm, on the :inl of Jmuary in the year Ine b.e. Ite helonged to an ancient family, of the equestrian onder, ant possessed of comsideralhe influence in his mative district. His father, limself a man of ralture. and desirons that his som should acpuive an eminent fusition in the state, remosed him at an early age to lionse, where, under the direction of the orator 'rassus, he was instructed in the lamguage and literaturs of eireco, and in all the other hranches of a pwlite erncation. In his sixtecoth you he assumen the manly fown, ant was intrulucell to the puldic life of a Raman citizon. He mow aryuirel a knowletge of law, and underwont a complate comse of discipline in oratery. At the same time he stmedicel philosophy mader thate
 anul Nowic schowls, an! meglacterl montal exereise. luwebrer anduols, which might conduce to his Suture "minence; beine thas early of the ophime which he aiturward mantained in his treatise the bothere that an wator should passess almost universal linowlolve. With the exception of a brief campong muler sull:, in the ricuial War, he pensed his time in there podiminary stulies until his ebth gear, when hee la gan to pheal in pablic. In one of his arbinst ames, ha distinguished himself by defeme
 none if the favourites of sulla, whe was then dietatin. Som after, fow the ln wedit of his hoalth, and in ond r th has innmasment in Ancution, he travellal to tha.
 wh his meturn, was mandel as semm to ne orater
 (56 15: \%), hw was apmotel by lot to a gevermment in Sindy, atmot whin he sillind with great alility,
and to the cutire satisfaction of thase whom he governed. sume years after his return, he lail the Sicilians under still ereater obligations by his successinl prosecution of their pretor, Verres, arainst whom he prepared no less than six orations, although the lirst hat the effect of disheartening the accused so effectually, that be soluntarily retired into exile. lassing, at short intervals, throngh the offices of :odile ( 69 e.c.) ant practor ( 66 L.c.), he was at length clected, by an werwhelming majority, to the consulship. II is tewure of office was rentared memorable ly the conspiracy of Catiline, which he frustrated with aumirable skill and promptitude. See Catiline. The highest praises were showered upon C.; he was hailed ly C'ato and Catulus as the - Father of his Cometry ;' and public thanksgivings in his name were voted to the gols. But his popnlarity dide mot last long after the expiry of his comsulship. Ifis enemies charged him with a puldie crime, in laving put the conspiring aobles to death withont a formal trial, and lie found it necessary ty leave Fiome, and went to reside in Thessalonica ( $5 S$ E.e). A formal edict of banishment was prononnced acsanst him, but he was recalled from exile in alont If months, and on his return to Lome was receivel with great enthusiasm. His recovered Tignity, howerer, some excited the cury of the homourable party' in the senate. with whom he hal resired to make common canse: while Pomey and Cirsar, the ereatest powers in the state, and from whose enmity he hall most to dread, courted his alliance and co-operation. Thus, while preserving an aldeamee of independence, he was betrayed into many actions which he could not but regari as ignominions, and which. by increasing the power of the trimmirs, led indirectly to the ruin of the republic. A remarkalle exception to this servile conduct is to the found in lis assisting Milo when suling for the consulship, amd defending him, against the wish of Pompey, and in spite of the hostile fecling of the populace, after he had slain Clodius in an accilental rencounter. Ihring this perionl, he emposed his works, De oratore Do liequhica, and De Lapibus. After a year's admirable administration of the provinee of (ilicia (51-50 B.e.), he returned to Italy on the eve of the civil war. With the convictions which he avowed, there was but one course which it woll have been hongurable fur him to pursueto enlist himself, at all hazarts, on the side of Pompey and the republic. Fat insteal of this he hesitated. lalancert the rlaims of duty and of interest, hamed Pompey for his want of preparation, and criticised the plan of his campaign. At length he joined the army of the semate, but, after the battle of I'harsalia, aloruptly yuitted his frienels, and rosolvel to throw himself upen the generosity of the conqueror. Aftur nine months' miserable suspuse at Brumdusinm, he was kindly received ly Civar, whom le followed to liome. During the years which ensuod, he remained in comparative retirement, composing his mincipal works in phil. osophy and rhetoric, incluning thise entitled Orator, IIortemsius, De F'mibus, Tissenhence Disputationes, Do Seture Deorm, Do Semectere, De A micitia, and De offeriis. On the death of 'iesar, he was dispused to unite his interests with those of lirutus anel the other comspiraturs, hat was restramel by dictates of findence. lat the commotions which followen, he "spuns!l the caus, of Ondamus, anl gave ntterance to his crlobrated philippics against Antony: Thase imations were the oncolsion of his death. Whan Octaviams ant Lepilns jomed with Antony in at trmanate. ('. Was ammer the poscribel; and his hife was rolonthessly sumbt. The soldiers of Antony overtook him whle his attemdants were beating him, now old, and in an inlime stato of

Cl'NIOER-I:EN, a name given by the çarrymen to a stratiun of the [ipmr Purheck serirs, almost entirely comprosel of the loosely asgregated shells of a small oyster (Ostrecu distorta).

CINERA'RLA, a gemus of plants of the natural wher Compowitor, sub-order C'orymbiferce, very nearly allied to someses (firmmdsel, Jagwort, de.), from which it differs conly in having the involucre formed of the row of crinal arect seales. The spectes are numerons, ant widely diffused ower the word in very varions climates. They are anmal or premial herhacens phants; with simple, generally touthed or sinnate leaves. Nany of them are remarkalle for the ashy appearance of the lower mat of the leaves, whence their name (lat. cmis, -rris, ashes). The lawes are often covered with a peculim sort of down. Two smail species are natives of the southern jarts of Britain. The flowers of some are very pretty. C: masitiona, a native of the sunth of Europe, and other sprecies, have for srme time bern mach cultivatel in gardens and green-honses. Many hylrids and varieties have been producel by cultivation.
('INERARY URNS' (Lat. cimes, ashes) were used by the mations of antiquity to contain the ashes of the deal when gathered from the funcral jile. Previons to bing depositer in the nrn the embers were soaked with wine; the urn was then flaced in a

niche in the family mansolenm. Ouly the wealthy comld atford somexpensive a rite: $C$ U . Were either sculftured in madle. or furmed of chay or glass. They were not always in the form in which we commonly sor them represented on modern tombs. Fig. 1 if tha accompanying illustrations is the
celelrater cinemer urn known by the name of the Portland matherini wase, preservel in the bitish Maseun. This beation production of Gruels art was disenvered abmat the mindle of the 16 th c., in a mandle sarcophastus in a sepmalche (behevel to be that of the foman cmperor Alexander Severns, $22 ;$ - 2.5 A. 15.) at Jlonte Ad (irance near Tome. The height of the um is 10 inches. Fire : 2 is one of the finest specimens yet diseoverd in the British lales, and is preserved in the musemn of the hoysal Itish Academy. It was fomme in a small stome Chamber near Panalstowns conaty uf Carlow. It is compused of very time clay, and is but 2 inches high. It contained the bumb lomes of in infint or very ymugr child.

CINNA, Lteles Comaclets, a Roman noble, was one of the principal supporters of the faction of Marius. After Sulla had diven Marins from the city, aml before setting wat on his expedition arainst Mithridates, he allowed G . to be elected to the consulship. Pint ('. hai no sooner entered npon that office ( 8.1 I. 6 ), than he impeached sullia, endeayourel to form an interest among the citizens who had lieen adhel to Iome after the social War, and acitated for the recall of MLarius. The events which lod to the return of Marins are stated in the article Marins (q. w). After a crnel massacre of the Romal citizens, in which some of the most eminent statesmen and orators were slan, Darins and $\therefore$ declaved thenselves consals. On the death of Marins, which ecemred within a few days of his nsurpation, C. made L. Y. Flacens his colleagne for that year, amil. P. Garla, for the two succeedinc years. in bt di, c. he pepamil to mect sulla, who was thers on lis way frmm the East to take vengeance upon his comies, lat was slan by his disatlectel trooss at Braudusimn. During his fourth consulate, lis daughter Cornelia hanl been married to Julius Ciesar.

CINNADAP, an ore of mercary, from which ahust all the mercury of commerce is obtained. Chemically, it is a bisulphuret of mercory, containing sto prorts of merenry aml $1: 3$ of sulphur. It oceurs lonth erystallised and massive, mot mifremuatly dissuminatal. Its erystals are six-sided masms.

 Lonton about 155, where he was one of the finst
members of the Royal Acaleny (foumded 1769), and died in 17s. His drawing is correct. his colouring harmonions, his heals have grace and loveliness, and the seneral style of his works is attractive, althongh exceerlingly couventional. A series of small copperphate illnstrations of orfomeln Furiono well exemplitios his graceful style. Several of Bartolozzi's best engrawings are in C's mamer.
(IRCA'A (from Cirep, 1. v.), a genus of rather pretty little herlaceons plants of the natural morer Onumpecor, with a derply 2 -cleft ealyx, a corolla of two petals, and two stanens. ': Lutofiance is frequent in shaly situatioms in Britain, and in most parts uf the contiment of Enorpe. It lears the Eugbish mame of Exchanter's Nightsmadr, and in Tromany it is called Hexenkrant (Witches' Herb). 'The origin of such names is not easily explained. The plaint possesses no remarkable properties, being merely a little astringent. Other species are found in the Himalaya, \&e.
Circais. Sec Northery Cheches.
C1RCASSIA, a division of the Western Cancasus, conprising the morth, and also a portion of the south slope of that mountrin range extending in lat. $42^{\circ}-$ $45^{\circ}$ N., and long $37^{\circ}-47^{\circ} \mathrm{E}$. See Catcasts.

CIIRCASSIANS, in the wide sense of the term, is the name given to all the independent tribes of the Caucasus; in a narrower sense, it denotes the inhabitants of the westem part of the range, which is called, in conseguence, Circassia. The $\mathbf{C}$. proper, however, inhabit culy the north-western wing of the Caucasus, with the exchusion of Abasia, or the furtion letween the Plack Sea in the rest amd the lower lank of the river Kuban in the north. They are called ly the Turks Tcharcassians, but ly themselves Adighe. They number from 500,000 to 600,000 , and are divided into fifteen tribes or clans. For their place in Ethnolngy, see Cafchian Vartety of Mankind. The Citcassian lamenase, as regarts the pronnuciation, is pecular, aml difienolt to acquire. The social condition of these tribes is precisely what it was when they tirst appear in history. They are a marauling and warlike fenple, anmest whom it is beld more homourable to live loy phumder than hy peacefol imfuetry: In common with all migand tribes, the ('. Cherish the most unrestrained love of mopendence. Their wermuent is a simgnlar compound of constitationalinm and fendalism. There are five dintinct ramks in the nation--viz, chicfor or princes, uolles, common freenen, depembants, and slaves. The thass of eommon freemen make np the great mass of the people; they ? crijoy the same Imitical riehts as the nobles. The fourth class, the clepenilunts, are the vassals of the princes and mohers, whose lands they colti. vate, and whose armies they form. Yet their lord has no right wer thair premon; fur in some eases they and their whole fambies lease lim; and they (am only he sold as slawes for pmashment aceoriing to the previous verdice of a natiomal assembly. The fifth class compmises the slavers, or those who have heon mado captive in war. They constituto the greaters part of the wealth of their loris, and sem apmetally to inerase tho ir power.
As regarals the riligion of the $(\therefore$, the prinees and moles are primpually Nohambedans, whilst the wreat mass of the periple have a religion whech is : kind uif mixture of Christianity and paranism, in which the colobation of lastor, the sign of the ©russ, sabred trees, sampitioe and processims with hishts, ply an impertant part. The 6 are as yet igment of writins, allhough they possess minstrels (hikuthert), whon tre: Iwh in great estecm. Besides aroculture and the vearing of eattle, which is
carried on by tha dependants, slawes, and whand,

 the thit in the sorilu lowing the firth of a right angle. ts the divisimes of the andes at the contri, effected by drawine lince from the center to the difterent linints of gradnation of the ciremmfence, are whionsly indelendent of the magnitude of the radias,

## CIRCLE

and therefore of the circumference, these divisions of the circmaference of the ( C may lee sowen of as leing actually divisions of angles. By laying a graduated $C$. wer an angle, and notieing the number if decres, $\& c^{\text {., Iying on the circumforence between }}$ the lnes inchuling the angle, we at once know the magnitude of the angle. Suppase the lines to inchule between them 3 degrees, 45 minutes, 17 siccomis, the angle in this scale would be written シ 4. $17^{\prime \prime}$.
It is ubvious, however, that the division of the quadrant int, 90 degrees insteul of any other number, is cuite arbitrary, We may measure angles loy the (6, however we graluate it. Many French writers, accoringly, have adopted the

C'entesimul Itivision of the Circle- - In this division, the right angle is dividet into 100 deurees, while each degree is divided into one hudred parts, and so on. This is a most convenient division, as it regures no new notiation to demote the diferent parts. Such a quantity as $3^{3} 45^{\prime} 17^{\prime \prime}$ is expressed in this notation ly 3 f5\%, the only mark required leing the decimal puint to sermato the degrees from the parts. Of course, in this illnstration, $3^{\circ}$ neans :3 centesimal divisions of the right angle, and 45 means 4.5 centesimal minntes, anil so on. If we want to trusslate the duantity $\mathrm{i}^{3}$ of the conmon notation into the centesimal notation, we must multiply 3 by 100, and divide hy 90 . To translate minutes in the common notation into the centesimal, the rule is to multiply ly loo, and divice by 54.

There remains yet another mode of measuring angles, known as the
"irculur Metsure.-The circnlar measure of angles is in frequent use, and depunds lirectly on the [roposition (Euc. vi. 33), that angles at the centre of a C , are proportional to the ines on which they stand. Let loA be an angle at the centre $O$ of a C., the radius of which is $r$; API; a semicircle whose cirmmerence aceordingly $=\pi r$; and let the length of the are $A P=$ a . Then, by Euclich, $\frac{\text { angle }[0.1}{2 \text { right }}=\frac{a}{\sigma r} ;$ and $\angle \mathrm{POA}=\frac{2 \operatorname{right} \angle \mathrm{~s}}{} \frac{a}{r}$ Now, supposing a and $r$ to be given, although the angle POA will be determined, yet its numerical value will not he settled muless we make some convention as to what angle we shall call unity. We are free to make any convention we please, anil therefore chasse such a one as wall render the per ceding equation the most simple. It is made must simple if we take "Imbt anches
have (bunting the mumbeal value of the angle

that then mancrival value of two richt anghes is $\pi$,

measurement to the sexagesimal. If $\theta$ be the circular measure of an angle, the amgle criutains $\frac{d}{\tau} .180$ degrees; conversely, if an angle contain $n^{\circ}$, its circular measme is $\frac{n}{150} \cdot \tau$.
CLRCLE, Matac, a space in which sorcerers were wont, accorling to the ancient popular belicf, to protect themselves from the fury of the evil spirits they had raised. This C. was usually formed ou ab piece of gromal about nine feet square (in the East, sewen fect apmears to have been considered sufficient), in the milst of sone darli forest, churchyard, vault, or uther lonely and dismal spot. The C, was described at midnight in certain conditions of the moon and weather. Inside the onter C. was another somewhat less, in the contre of which the sorcerer had his seat. The spaces between the circles, as well as hetween the prallel lines which enclosed the larcer me, were filled 'with all the holy names of (rod, and a variety of other characters supposed to be potent against the powers of evil. Without the motection of this C., the magician, it was lelieval, would have been earried off by the spirits, as he would have been, had he by chance git out of the charmen space.

ClRCLE, Mrral, an instrument used for determining the meridian altitude or zenith distance of a star. It consists of an astronomical telescope firmly fixed to a graduated circle, which moves about a horizontal axis, lixed in a strong vertical wall

ruming north and sonth. In the common focus of the eyc-piece and object-glass of the teleseope is a system of cross-wires (spicter libes are generally ised for the purpose), whe bring horizontal, and five vertical, with ecpal spaces hetween. The line joming the optrial contre of the ofject-glass with the intersection of the horizental and nidille rertical wires, is called the line of collimation of the teleseare, and when the instrument is in fiffect adjustment, this. line moves in the pheme of the meridian.

Bendrs the abowementionel fixel wire, there is a mosable one, called a minometor wire, which is mowi ly mons of a scrow, momaing always buallel for the fixad horizuntal wime

If the instrment $l_{\text {r }}$ so adjustent that the image of a star, whin passing anows the midite vertical wire in the feld of vinw, shall at the same time be lisuceten ly the fixem horizmatal wim, the star is at that moment in the line af enllimation of the teleSorpe: It is therefore at that moment in the mowim, and its meridian anombly distance is the analde thromeh which tha cirede womd have been thmed from the pwitum it han when the line of colhamann of the tolessme pinterl to the renith. 'flure is a dixal pointer, $p$, for the purpose of apmomatrly rasing the instmment. It the inestmment wer aceurately aljusted, so that $\mu$ was

## 

"presite the zero pont of the and". whon the line of collimation of the: teloseope fandeal to the \%enath, the are of, in the alowe fersitum of the instrmment, would be the morielian voluth dintaner of the star.

 which the cirele has movad in hringing the telasentw from the vertical to any oflare fusitnm, sumb as that

 setermine only the slivision neamest on 1 ho fisen
 or Dlierompter ( $4 . v$. ) fixmi opposite to the rim, as at $a$ (the distance botwon the axis of whinh am] the punint $\rho$ is constant), the protion of the interval

 fixed olposite difernt points of the rim ; and the "reading' of the instrumbent is the moran of the 'readinus' of all the miomaserpes. 'Tlais tembes to elmanate errors arising from imperfect onduation ank atjonstment. If the instrmment is proferly aljusted, the zero proint of the circlu will les it $p$ when the line of collimation of the trlasenpe prints to the zenith. In practice, however, this is not always acenrately, or even approximately the casu: As we shall immediately show, it is of 110 comseguence, as the final result of every olsorvation is the diflerence between two rablinge.

It is evident that the dillimence between any two realinus of the instrmment will represent the anerle throngh which the lime of enllimation of the tele. scone moves in passing from one proition to the other. It romains to sliew how a tixal pwint-viz, the Nadir (q.v.), is observen, and thath low an observation is taken of the stan itself in its meridian passage.

We mast explain bere that the tixad horizontal wire in the eye-piece of the teloseoren in the instruments as now used, is only an imatimary line which determines the line of collination of the telescope, It coineides with the position of the micrometer wire, when the serew-heal of the mierounctel manlis zero.

To ohserve the nadir, a trongh of maremy is places moderneath the instrument, and the teleseone is tumed so as to look vertieably downwatis into it. An image of the system of cross-wires which is in the common focis of the eliject-ulass and eye-piece, will he reftected baek asain to neary the same fools. Looking into the teluseope, the noserver now adjusts it by means of a tanernt serew till the retlected image of the homiznatal wire comeines with the real one. "lhe final abljustment is perhaps most delicately eflected by turning the serew-head of the miormeter whith moves the wire itself. When they corncirle the line jorniner the centre of the objeet-glass of the teleseaje with the intersection betwean the midulle vertical and horizontal micrometrie wire, will le vertical. Now, the angle letween this amd the line of collimation of the telescope, which, as we have sad, joins the optical centre of the ubject-glass with the intersuction of the midillo vertical and manimary fixed horizontal wire, will, if the mincometer is in proper aljustment, be at ouce real off the micrometer screw-head. The instrmment heiner ammerd as ahove ajousted, the microscones are rearl off, and the reading of the mismoneter serew-hend abowe
 reatinns as the case maty le, the malir ruatiner of the instrument is deternimat. The zemith rexding therefore, which alifers from it lay 180 , is at ance known.

Again, to observe a star in the moridian, the instrument is jreviously aujusted so that the star,

 larizontal wime l'matly, just and the star prasuat

Fond of dramatic literature, liamsay appars to have incured some local oblogry liy leuding ont phays; and his wish to introduce a taste fir the drama into Edinburorb may acomblingly have sugigested the notion of a cirenlating hbrary. lie this as it may, the library wheh he began was continuted throush varions hands for alowe a hnmared years. At Ramsays meath in 17.57 , his library was sold tu a Mr Yair, whose widow carried it on till 1700 , when it was lmught hy Mr James Sibball, an ingenious inquirer into Scottish literary antiguities. Sildalil lived some years as a literary nann in London, duriny which period, heginaing with 179\%, the C. L. was carried un, sulbject to an agreement, ly a Mr Lambe, shbinh afterwards resumed the direction of the lihrary, which he considerably exteuded. At his deatli in lso3, his brother attompted to earry it on ; lont not leing successful in his duanarement, he dispresed of it in 1806 to Alexauder Mitkay, a ferson of extraordinary energy aud berseverance liy the acquisition of Various wher libraries, Mr Mackay meatly enlarged the collectiom, which, moder the name of the Edinhareh (: L., he comalacted at jat High Street. Here, by longe contimued and mimute attention to busimess, Mr Mackay realised a emmpetency, and he retired from active pursuits in $163 I$. when this extensive collection of homks was lraken up and sold by auction.

There are several circulating libraries in London, clamines to he of uld date, lint prolably not so early as $172 \%$. In a late reprint of an old advertisement, we see 'Thurusals for erectines a loblic Circulating Lilirary in Lamom,' multer date June 12, 1742. This lihrary was to he dstahlished *in some convenient blace at or near the lioyal Exchange;' and the subseription was to be a granea jel ammum. Two of the Iresent cirendating librands are heliered to be desecnded from this prinitive stock. No numerons had circulating libraris become in the early years of the present century, that they absorbed whole chitions of mowds and rommees prepared for the purpose by a London publishinis establishment, desperated the Dlinervir Iress. Since all the artem ind hame leaves the heart throme the :wrtic copening, in tracing its course to the differme parts of the system, we dramsly have maly to follow the arota torits dinal banches. Jiefermig to the article Aosa, where the principal inanches of that great argan are midiated, it is sufficient, withent further anatomieal details, to say that the timal ramatications of the arteries distrilnte the arte-
 every part of the lorly:
The reins like that arteries, are fomel in maty every tissue; they commence ly mimete ftexnses (an anatonnieal term for a netwonk-like armasement), which commanicate with the capillares. branches from these plexuses uniting torether, form small venous trmoks, which, by joining, increase in size as they fass onward towards the heart. If we execpt eertain vemons strmetures (ealled simesev) ocenring in the interior of the skull, we may divide the vins into two sets-the sup whicin or cuturnous, and the deno veins.
The decp veins accomman the arteries amb are usually enclosed in the same sheath if colludiar tissue with them. In the case of the smaller arterice they gencrally exist in pairs, one on tach side the artery, and are called bren comitos, while the larger arteries have usually ouly one acompanying vein.
The superficial weins necur immediately beneath the integment; they mat only return the flowel from the skin and aljacent structwes, luat commumicate mith the derep wins.

All the veins finally unite into twa dare trmbs. termed the suprien iand infirion pone enom, which "pen into the right auriele of the heart; the superim vena cava loing formed by the union of the reins which detom the blomb from the land and neck (the jugulars) with thase which convery it from the arms (the sublewians), as shewn in lig. Is: while the inferior vena eava fatso shewn in the same figure) receives the low from the lower extremities. the trumk, and the abulominal and petvie visepat.
We must refer to the article Vons for the structure of the walls of this part of the cirenlating system. There is omly one print that inmeratively requires notice here-viz, that while the arterial system presents no valurs, exemp at the jwints where tho two great trunks leate the hart, the veins enntain a great nomber of valves, which are formed hy a doulding of the dining mentratm, and resomble focket-like folds a puncher, which alluw the blomi frec passage towards the luart, but pwent its reflux.
There is no part of the vemons C. which, from its geat importance, retuires special motice-viz., that of the remons hood of the shleen, panereas. stomach, and intestinal canal. The flood supplew to these organs ly the endiac axis ami the two menteric arteries is not returned directly to the vana eava. and thence to the heart. as onems in other parts of the system. The vins of these orgme mite towe the into one targ. vessel, called the rance proter. which, enterne the liver, branches ont again like an artery

 these ammals, exepting in the rispiratmy orrams: the hood hasing the ogen cods of the arterine, pheses intor the moterstices (lecume) of the parenchymu of the berty, from whence it is tiknen up loy the open monthe of the vonots radicles; hemee this kind of 6 is called lammary.

Su the crustacea, the form of the hart and the number of its oritices presents soveral moditications; the following is, howerer, the tupinal Buode of 1 ? of these animals. The heart, which is how a single cavaty, is sometmes rumb, and sometimes long and tubular, and is the point of departure of the arterial system, which consists of trunks emerging in various disections. "The blood returning from the arteries dues not enter int" distinct veins, but into irregular excavations in the tissues, which are termal venous sinnses; from these venons sinuses it masses to the gills, from whane it is returned to the heart in an aërated state by the hanchiocartiac canals; so that here, as in the mollusea, the heart is systemic.
It is unnecessary for us to notice the comparatively imperfect $C$. in insects and anmals lower in the scale than those we bave alrcady considered.
considered. re physiolugy of the circulation.
We shall consider-1. The tlow of hood through the lucart; 2. The phenomena of the arterial 1 .; 3. The phenomena of the capillary $\mathbf{C}$. ; and, t. The phenomena of the venons circulation.

1. Direct observation and experiment elearly shew, that the muscular contraction of the heart is the principal source of the p"wer by which the hood is propelled in its course. This aetion of the heart maty be olsservel by opening the chest of a living animal, or, letter still, of an animal depmivel of sensation am? motion loy poison, and in which artificial wespiration is kept up. It is then seen to consist of two motions-first, a contraction or systule of the auricles, and second, a corresponitig

[^0]embaction of the verstricler. The contrantion of the
 and the syotele of each ravity is alimetly follow an hy its hastale or relanation: there is then a lriat furionl of requse, the laant can\}iting little or no matinn. It the momant of the systeles of the smitriches, the: : cansimg a polsation againat the riles that can be f.lt matrmally:

The horemexirted hay the left vontricle has leren so very viermaly estimated, that we most rengrd this puint as still unsettleal. The mumber of montractions of the" lant of an ahble in a mome is alwhe 70 on 75 ; it is, howewor, liable to arate variations, which will be antien in tha artiche
 antion, which may be readly heard by aplying the are cither directly or thrugh the medium of the st thascore to the cardian region, are disenssed in the article Ifeait, boczos of the.

2 . The atheries exercise a vast influnee on the: nowement of the homal through them, in virtue of two jroperties which they possess-viz, - lasticity and contractility. These two endowmonts are not equally and uniformly possessent ly the whole arterial system-elasticity" (the property by which the interrmetel or discontimans force of the heart is made equalle and continuous) existing chactly in the larger trunks: while contractilitywhich is mote required for regulating the flow of Whod to prarticular parts-is most marked in tho smaller ressels. The rate of movement of tho Whod throngl the arteries in man can only ho roughly calculated from experiments on animals. Vollsulam finds that in the carotids of mammals, the aserage velocity of the blosi-stream is about 12 inches per secend; he has likewise aseertaned that the velocity is greater in arterics lying near than in thuse at a distance from the heart, that it is not increased by an augmentation in the number of pulsations, inut that it is creatly anganented by an incrase in the volume of the blood, and lessened ly its diminution.
B. It lass long heen a dobated puint, whether the eapillary (' is intheneed by any wther agency than the contractility of the leart and arteries. Harver beliesed that the action of the heart allome was sulficient to sema the hood throngh the whole cirant, and in recent times his riew has lacn supported by , I. Aliller and other eminent physiolosists. Wh the other hand, I'rofessor Draper if New Whak holls the opmosite extreme view, asserting that "it is now on all hands concentel that the heart discharges a very subsidiary duty.' We believe that lifhat was the lirst to maintain the opinion, that the capiliaries are orcans of ${ }^{\text {mopulsion, and }}$ are alone concorned in returnmy the blow to the heart theongh the veins. Although bichat attributed too great power to the capilliaries, there camot be a doubt that the movement of the hoon thomph these vessels is not solcly due to the heart; in short, that there is what may le temed a capillary power. 'Tho following are a few of the facts proving this to be the case: 1. On watching the C. in the wely of a frog's foret, it is at first seen to go wh with perfect regularity: After a time, howerer, various changes are ohservel, which camot the attributed to the heart, such as alterations in the size of some capillarics, and in the velucities of the currents prosing through then, and occasionally even a resersal in the direction of some of the lesser enments. $\because$. In cohld-bleded anmals, the movement of the lidond in the capillaries contimues long after the excisinn of the heart. 3. Actual processes of secretion nut unfrequently continue aiter death; sweat, for instince, may le exuded from the skin,
and other secections may be formed by their respective clands, which conld nut talse place if the eapillary C: had stmmen. 4. Gases vecasionally nceur in which a fuetres withont a heart is prodnced, and yet in these cases monst of the urgans are well hevelopeal.

What the nature of this canillary poner is, is not clearly kuown. Professor Dranne and others have chokavourel to explain it on the principles of capullary attraction. There is no satisfactory evilence that the capillarics possess true contractility, for, although their diameter is sulpject to great variatoms, this may be due simply to the elasticity of their walls. If we coukd only atahlish their contractility, the diffeulty would te removed.
"The rate of moverumen of the blow through the capilaries is alout $1=$ inch per minute in the systemic capillariss of the fros. $1 n$ the warmblooked animals it is pubalyy more rapis. From Volkmon's uservations, the rate in the dog is about 1 's inch ine minute.
4. It is usually estimaterl that the venous syom contains from two to thace times as much hand as the aterial. The latter is probally the move eorrect ratio, and, ats the mamety of home in the two systems seems to lear an inverse ration to their resmative capacitics the ranoms home will move with only one-thind of the velocity of arterial bluad. We lave alrealy moticed the onemrence of valves in the venoms circulation. Thim ohject is evidently to prevent the reflux of blomb; hane they are of important use in the manterance of this part of the circulation. They are most abumbat where there is much masendar movement. 'The movement of hond thrombthe rains is undonltendy manly due to the cisis if thepo result. ing from the contration of the heart ami are ries. Theis is mach assister in many parts of the system by the comstantly recurring pressume of the adjacent muscles upen their trunks. The mevement of inspation, hy cansing a comparatise vachum in the chest, has been supposed loy somu physumuists to assist the flow of remons hamet to the heat, amd a simitar intume has lacen ascribal tu an assmed snctinn-puyer of the heart. The manace tility of the reins in man is toe slight to proluce any marked effect on the pmpulsion of the curent. From the investigations of l'rofessur Wharton. Jomes 'on the rlyythmical contrantily of the veins of the lat's winc.' we may infor that, in many of the lower admals, it is pubaly a mone cilicient power. ln comection with this article, consult

CIRCUMCI'SION (Lat. a cutting around), the cutting off the foreskin (prorputium), a rite widely diffused among ancient and modern nations. The prevalent illea among Christians was (and perhaps still is), that the rite originated with Abrabam, who (as we read in Gen. xvii. 9-14) was commanded by Cod to circumeise himself and lis whole household, aud to transmit the custom to his lescendants. But, as Jahn (Dihlische Archuologie, Vienna, 1797-1800) acutely observes, this is inconsistent with the very terms in which the command is expressed, these terms fre-suphosing a linowledge of the rite on the part of Abraban. That it existed previonsly t., the time of the patriarch, however, seems to be indisputable. The researches of modern scholars poye that the Eyrptians, for instance, were in the habit of circumcising long lefore Abraham was hom. Rawhinson, in a note to his version of Merodutus, remarks that 'circumeision was already common in keypt at least as early as the fourth dyuasty of kings, and probably carlier, long before the lirth of Ahalsm, or 1900 n.c', The testimony lorne by the monuments of Cper and Lower Engit (consult Sir Gardincr Wilkinson's Manners chid (Custons of the Ancint Eyputions) is to the same effect, and apparently conclusive. Another argument wheh has been aldueed against its Himhanic origin, is the fact of its heing so extensively mactised. At the present day, it may he traced almost in an mbroken line from China to the ('apre of Good llare. It is also a usage in many of the sonth Sea lslands, and the followers of Cohlumbus were much astonished to dind it existing in the West Indies, and in Mexico. Recently, tim, it has been ascertained to have been long paretised lyy screral tribes in sinth America. Such being the case, many sclulars hold it infoossible to sumpse that the migin of so universal a rite can he traced to a single Semitic nation, more especially when that mation was peculiarly averse to intereourse with other nations, and in other respeets exercised no orect influcnce on their customs. Whether, as Jahn sumpuses. Ahraham obtamed his knowledse of $C$ from the Fexptians. we cannot determine. It wohle appear, however, that tho Chanites among whom he came to reside were not circumcised, for we read of the l'rince of Shechom and his perple materening the oreration, that the fommer might ohtain the hand of Dinah, daughter of Jacob; and the institution of it in the fanily of Abrahan was pubably sufficient to mark oull that family from the surmumbins tribes. In the case of Abraham and his desecmlants, the rite acquicel a religins signifirane It was ordaned to be the token or seal of the wrerlasting coverant lutween Gex and his people. Such is the view of St Paul, who boling lyon the 's. of the foreskin as symbelical of the (. of the hout; and that along with all that was morely Julaistic and waterial, it was almogated by the more spiritual teachng of Christ.

Thu time for (': amme the Jows is the Sth day after the lirth of the chold; amons the Arabians, thu lath your, in remmoname, it is said, of their ancestor limmed : amome the liatlirs, at a still later prombl, mandine in fat, the transition from youth to manlunl: and, indecol, wath nation seems to have selowtel the than must agreable to its own motions of what is prombent or bmmins The Ahyssinians

CbBCUMNAVIG.d'TloN, the dom nemally aphbed to the act of sailing woml the world, its literal meaning being simply a sailing romm. The C. of the globe was at one time consideral a great feat, hut it is now regraled as one of the most emnmondice aflairs in a sallon's experienec. The first to circumarigate the globe was Naghlhans ( g . v.), or Mayellan, it lowtughes, in lats; Minhtren years afterwards, it was accomplished hy a spmiard; num in 1577 by the ilhatrions langishnan, brake. The most echednated of ciremmanigators, lunever, was Captain Jomes Cook, who, hetween 176S and 1779, mate three voyages round the world.

## CIRCUMSTANTIALEVIDANCH. Sce Eyherce.

C]leUMVALLA'TION, in Furtification, is a series of works surmunding a place when muler siuge; mut to serve affensively iuginst the phace, but to defenl the siege-arny from an attack from withont. It usually consists of an dain of redonlita, cither isulated or comnected hy a line of parapet. Such lines were mach usot in the siepes of the ancient and midhle ages; but in motern fimes they are not so necessary, becanse the nse of artillery lessens the duration of a siege, aml alsu becanse the besiegers have generally a corpo of ohservation in the nen fied, ready to repel any foree of the enemy about to succomr the lusiduth. A remarkable example of U. was that at Selastopol, where, while a circust of latteries fired njom the town, an onter circnit of redondes ani lines kept off the dinssima who were in the aren ind l ; hat the necessity for this arose out of the smalluess of the besieging force comparel with that of the besitgen. The nemrow escape of the allies from utter overthrow at Inkermann, shewed the necessity for this extemad defence. For the relation which (! bears to Countervalition, see that article.

## CLIROUMVENTHON. Sine Fmint.

## Cllicus. See larmiel:.

CLRCUS, THE, of anciont lhome, was a large oblong bilding, aldated for charint-races and horseraces, and used also for the exhilition of athletic exercises, mock-entests, and contlicts of with leasts. The Circensian Ganes were allegel ly tradition to have originated in the time of fimmulus, when they were dedicated to Consus or Neptume, and called Consuctiar. After the nist war mulertaken by Targuinius Priscus, in which he captured the Latin city of Apiole, his victory was colchraterl ly games. is space was marked ont for a C., aml the sinators and knights were allowed to erect scatiobliners mand it for themselves. The grmes continumi to be beld munarly, and a permanent mbitice was soon aiterwarels constructed. This was distinguished, sulisequent to the erection of the lilamimian and other large eirci, as the Circus Maximus. It must have been altered amd enlarged at varions times. According to different comprotaions, it was eaprate of holding $150,000,260,000$, or 355,000 persons. Its extent also bas been varionsly estimated. In the time of Julins Cosar, it was three stadia or 185.5 feet long, and one stadimn or 6.5 foct wide, while the depth of the buidings surmoming the open space was half a stadium, or about al" fet. Nil the circi in liome, of which there were a considerable number, are now completely destroyel; that a small ('. on
the Aphian Way, almont two miles from limme, known as the C'ireus of 'aramalla, is still in a state of pree sorvation. Its emstruction is believed to have dillared sary little from that of similar baidings. 'The amexiol womedeat will give some dea of the arranganme and mative dimmsions of its parts.

9 Geo. IV. c. 20 , commonly called Wir William Rae's Act. A full and correct copy of the himel, or charge acsainst him, must be served on the panel, or accused, with a list of witnosses, and of the assize, or jury. A notice, intimating the day of compearance, must be marked on the eopy of the libel, and subscribed by the oficer and a witness. This C. must proced on a warrant issuing from the comrt before which the aconsel is to be tried. It may be executed cither loy a Macer (q. v.), a Messenger-atarms (I. v.), or a sheriffofficer ( $q$. v. ) of the comaty within which the C . is made ( 11 and 12 Yict. c. 70, s. 6). If the panel can be fomm personally, the C. must le refivered to him, hut if not, it mist be left at his dwelling-place with his wife or servants; or if access canot be obtained, the oflicer must affix a eopy to the principal door of the honse (1555, c. 30).
Citation for inteimepting PrescriptionFither the positive or negative prescription may le intermpted by citation in an action. Sce PrescretpTios.
CI'TIZEN (Tr. ciloyen, Lat. ciris). Aristotle defines a C . to be one to whom belongs the right of taking part beth in the deliberative, or legislative, and in the jniticial proceedings of the community of which he is a member (Politics, iii. I). A ( C , therefore, can exist only in a free state. Between a C. and a sulject there is this distinction, that whilst the latter merely is governed, the former also governs; and thus, though every $U$. is a subject, many subjects are not citizens. In this, which was also the sense attached to the term by the Romons, when used in its highest meaning-that, riz., of the ciecs optimo jure-it has passed to the modern world, gradually coming to be so understoml everywhere. In the heroic ages of Greece, the idea of citizenship was lut impurfectly understront. The members of the comeil and assembly were mere advisers of the kings, who, as godduscended, were regarded as monarels in the strict sense. Lut something of the 0 . character even then attoched to the immediate followers of the chief, when regarded in opposition to slaves and strangers; and it was from them that the domiuant chass sprang, which everywhere overthrew the monarchies, ame estallishel the small self-governing states-the democracies, or rather aristocracios, of Grece. At first, the rights of citizenship in Athens and other Greek communities ware readily attainel ly those who were not hom to them; lat at a later perion, when the organisation of Greck civie life had reached a high dogre of perfection, arlmission to the roll of citizels was peroured with great difienlty. In Sparta, indeed, according to Herolutus, su saring were thay of their mational pivileges, that there were only two instances of thate conferving thom in their full moasure on strangers. 'The Perimei, or stramgers ly wigin, who slared the Sbatan territory, thongh not on equal toms with the Sputans, wre probilhy, as regarled pulitical riyhts, prety murh in the same prasition with the lioman plecians, In liome, there were 1urfot and less perfect ritizens, whose respective positions are thas described by Savigny in his
 the free repulbic. there wore two celasses of linman citizens- one that hand, ame another that ham not, a share in the soverinn pown. That which pecte liarly diatinguishow the higher dess, was the right to rote in a trile, and the eaparity of enjoying masistracy.' All the prisate rixhts of citizenship (the jus armmbii aml jus commercii) belonged to the citizens of the lower class, hat the public rights of voting in a tribe, and of minovins the honours of the magistran'y (rublrayinn it hombrex), were devied

## ClTMC ACHO-CITlADHLLA.

them. Under these two classes, again, there were two others-the Latini and the Peragini.
loman citizenship was acquired mosit commonly by birth, but for this, it was renuisite that botis father and mother should lie citizans. If a $C$. married a Latina, or a Peresrian, wat lolievims her to be a $\mathbf{U}$., the childten beaten of the marriage followed the status of the mother. liat latterly, it was permitted, by a leceree of the senati, to the parents to prove the mistake, and thus to raise both the mother amb her children to the rank of citizens. In earlice times, the citizenship could le conferred on a stranger only by means of a le $x-\mathrm{i}$. e., ly a vote of the people asscmblded either in one or other of the Comitia (q.v.). It was conferved at a single sween on the whole of the Latini and Socii. In the case of some of the proviners, both in Italy and Ganl, the Latimitas was given as a stop to the Cioitus, the former being convertel into the latter in the case of any one who had exarcised a magistracy in his own state or city.
When the inperial power was estallishol, the mblic rights which formed the chief characteristic of the fnll Roman citizenship, became little mure than enjity names; and the only value which thenceforth attached to it consisted in the private rights which it conferred. Such as it was, the cunstitntion of Caracallin extendel it to the whole Roman world, the distinctions letween Cives and Peregrini and Latini being preserved only in the case of certain indiviluals, such as freedmen and their children. Even this distinetion was abolished by the iegislation of Instinian, the only divisions of persons henceforth heing into suljects and slaves. A fuller accome of this interesting suljuet will be formel in Smith's Dictionary of Gicek rend liomen Antiquilics.
In its modern use, the term $C$, is applim in Gireat Britain to a dweller in a town, ont this cither in the general sense of an inhalitant, or in the narrower and stricter sense of one who enjoys its privilecrs and franchises. In France, it denotes eny one whon is bern in the country, or naturalised iu it: and in America, it is uscd in the same sense, only that there there is a slave population whon it dhes nut inchuk. In this latter acceptation, it is elpuivalent to the term sulfice in England.

CI'TRIC A'CID is an organic acid present to a considerable extent in limes and lemons, ami to a less extent in gooseberies, currants, rasplemes, strawberies, and other fruits. In proparine (C. A. the juice is allowed to ferment, and chalk loinf addea, a precipitate of citrate of lime is formel. This precipitate leing treated with sulphuric acin, sulphate of hine is formed, and the acid remains in solution. It is a tribasic acid, having the symbel $\mathrm{C}_{12} \mathrm{H}_{5} \mathrm{O}_{11}$. It is readily solulpe in water, am has an intensely sour taste; it is used in medicine. especially in the form of lemon-juice, as an antiscorlutic, and in the orts by the silledyer th leighten the colours of saflower and cochinual, and by the calico-printer for discharging mortants from cloth. (: A. is a constituent of the finer hinds of lemonade, ginger-lieer, \&

CI'TRON (Citrus medica: see Citrest), a tree cultirated in the south of Eurepe, and other warm. temperate, or sub-tropical countries for its fruit; a native of the forests of the north of India. Isy many lutanists, it is regarded as a mere variety (or perhaps the original type) of the species which produces also the lemon, swect lemon, lime, and sweet lime; ly others, these, or some of them, are regarderd as distinct species. The C. has oblong tootherl leases; the thowers are externally of a violet colour: the fruit is large, warted, and furrowed; the rimi
 is refricerant; lui the part chafly valued is the

On the recession of Queen Victoria, the C. If,
which had long been of the natime of a compret
between the monarch and the parkiament, and as snch beyond the combrol of parliament during the life of the sovereign, was settled by 1 and ? Vict. c. $\because$ The Queen surrendered the hereditary revenues of the crown for life, in consideration of a yearly sum of 385,000 , to le devoted solely to the supmirt of her Majesty's honsehold and the honum ant dirnity of the erown. The application of this sum to the particular branches of the Quecu's privy porse, the salaries and expenses of the houscholi, the royal bounty, alms and special serrices, is intrusted to the Lorls of the Treasury; and it is provited that if the C. L. charges in any one rear shall exceed the total sum of $\pm 400$, 040 , an accoment of the particulars of excess shatl be lait before parliament in thirty days. Besides the aloove sim, £1200 a year is intrusted to her Majesty for the bayment of feusions, 'to persons who have just claims on the myal beneficence, or who, by their personal services to the erom, dy the perfomimen of duties to the pullic, w ly their nsefnt diseoveries in science, and attainuments in literature and the arts, have merited the gracions consideration of their sovereign am the gratitnde of their comtry.'

CTVLL SEINTINE is a gencrat name for all the duties rembered to and mail for by the state, other than those relating to haval and military matters. At the heal of the U.S. are phacal the officers of the ruyal honseholi, under several departments. Then cime the officers of the Honse of Lords and the fouse of Commons. Then a vast mumber of offices or departments, of which we can only name the more important: Treasury, Home office, Foreign Ohice, Culonial Oflice, Intia office, War Office, Armiralty, Boaral of Traile, Pust Ofice, Customas, Excise, Exclacprer Ohlice, Natinual Heltt Office, Office of Whods and liorests, Office of Wimks ami Buillings, Inchy of Lancaster, Inelly of Comwall, Tecont Oftace, Pon-law lownd Resistrar-gencral's Othice, Stationcry Othice, Fuelosiastalal (ommission, Charity Commissim, Jatent Oflice, Lanl and Emigration Olfiee, Trinity IIonse, He rakl.s" Colloge, Law and dunity Conds, Ecclesinstical and Admiralty Courts, Criminal ami I'diec Conts, l'rison I Pepartment, Pritish Muscma, Diplomatic (6on 1 , 'onvalar Corps. The U. S. rating exclusively to serthan ampl Ireland, forms two disinet list-, nut inchuded in the above.
The general desimations for the ciril sermats of the erown are ommissioners, sereterits, ant rifos. 'There are wthers, but these are the puincipab. Noarly all enter the sorvice as cherks, on salariss commencing at alout $£ 80$ per ammon: and they rise chicily ly senomity. It is usual to comsibur as lodonging to the (. S those who receive amme! salaries, whon" chicf eccupation is writing, whese puwisum for lifu is pretty well assured, who hawe a fair chane of promution as they grow chere, and who mas lobli forward to a superanmatiom pension in the ir ohl ase The class does not include mon of hmabler attan. bunts iond positiom, such as policemen and postmen, amd others pail weekly wazes: thase the rivil sorvants of the crown, it is trac, hat thy conne unlor a different eaterory. The 'imil sione $h$ ine for 1 4bitcontains the names of :hent 1 ha, 100 perams, all of whon are sail to 1 onsess "sitnations maker : "Mrmbent.

 cxamim all cambinatm for the service. A camblath brine armimet, the: commissioners in due than

He sends in certificates of birth, heaith, and character. He is examined; and if he stands this test well, he is certified. 'The heuls of the several icpartments agree with the commissioners as to the kind of test to which aspirants ought to be subjected. If the camdidate fails at the first examination, he is gencrally allowed another chance, and sometimus a thirl. When the candidate has received his certificate, he euters one of the fulblic offices, and goes through a six monthss mobation; if sucecssfully, then he becomes a govermment clerk-or whatever it may le-at a defunite salary. The commissiouers can neither nominate nor aproint; they can ouly examine, and notify the result of the examination. Most of the nominations, and afterwarls the apmointments, are made by the heals of the sereral departmentswith thin exception, that the Treasury has a vast prepumterance of the privilege, usually excreised by the parliamentary secretary for the time leing. Some of the cancirlates goup for examination for any office that may offer, without special reference to any oue in lanticular; while others present themselves for a competitive examination for some partieular ollice or elerkship. See Exinhnation. On one nceasion (in 1860), i3 persons competed for 9 elerkshipis in the War Office, and 57 for 20 in the Costoms. 'Yise age at which the candidate is almitted is, at most of the offices, letween 18 and 25. The heals of departments may make oceasional appointuents withont a certificate from the commissioners: but this can omly be done unler special eireumstances, and for a special kind of service.

From the commencement of the new system in 1535) duwn to the close of 1860, the total number of nominations was about 14.000. Of these persons, some never went up for examination; some failed in reforence to health or moral character; some throngh intellectual or elncational deticiencies; some, though chuible, were defeated by others at empretitive examinations; and some boke down during probation. Of those who passed through all the stages of the orteal, the preater umber hare receivel alppintments, and the rest are waiting For new equmes. The C.S. lias leen remberd more attractive by a liberal system of superammation, introluced by act of parliament in 1859. On retirment from the scrvice, the sermat of the crown receives in pension fin the rest of his life, rarying. accorting to the mumber of yars he may have siervel, from me-sixth to four-sixths of the rate of salary he lial last rececived.

The mone impurtant iejurtments of the $C . S$. will le fomm lividy describal under their moper headings in this wav.

CIVIL SHRVICN ESTHMATES inclute all ©x]enses of the state not prosided for in the Army and Ning Extumatos. As in exanple of these (C. S. la, we will quote the monnts voted moler
 April 1, 1s60, and coding March 31,1561 :

C'FV'GiAN. This term has three meanings, which ar" elistined, thongh intimately related. I. In a popmbar sense, it signilies a person whese pursuits are civil: i. e, neither mititary werencal. ?. As is law-term, it means, wither a f "rson who is versed in the brinciples ant ruls in acemolance with which civil rishts may bo frecly, hlanclessly, and
snceessfully vinulicateal in society marablly, or in tho particular state to which he belones-m : On O who has mate a special stmoly of thase rulis and pinciples as exhibited in tlu Jiws and govermment of lone (the lioman civil law). The sivil law of liome exereised such influmee upm tho fomation of the muncipal systems of almost all the states of moderin Eiropre, that thande who dirantal thernselves to its stmby ware magrided as civil' or manicipind lawyers pai sodener. From the more learnent training which this stmely demanded, (! came often to be usal ass synomymous with proferson or doctor, as opposed to practitioner of law ; the former beiog generally more deeply versul in the lioman law than the latter ; and this in its tum Imi to its heing loosely applien to the internatiomal Liwgers of the loth e. (Cootion, I'uffembonf, \&e.), who gexmerally helonged to the class of civilians in the sense of liomaniste, and who, thonerh their subject was altorrether dillerent, quoted larrely and derived many analogiea from the lioman jurisprilence. At present, from onr laving in Great lritain no class of persons who prosecnte law as a welcuce as oprosed to an wh, the tem C. hass reverted to its nurower menlieval sense of student or teacher of the Roman civil law, aml thus we speak of Savigny as a U., but not of Story. 'Thes special sense in which $C$. is understood in Engrgmed will be explatimed muler Egclesiastical Counits. See also Auminidety Cuuris.

CIVILISA'TION. This is a gemeral temm to designate the condition of the more anvancerl nations, as contraster with thase that are loobed upon as barbarians "n swages. We term the lealing mations of Dumpe evilised; the chmese and Fartars less so: the Red Indians, Iustralians, Esonumanx, least of all. "Whatever le the characteristics of what we eall savare life, the contrary of these, or the qualities whicle suciety puts on as it throws ofl these, constitute cjvilisation. Thus, a savage tribe consists of a handful of indiviluals, wandering of thinly seattered a vast tract of eonntry; a rense popmation. therefore, rwelling in fixed habitations, and lurely collected together in towns and villages, we tom civilised. In savage communities, each persom shifts for himself: except in war-and even than bery imprefectly-we seldom see any juint macriations carried on ly the umion of many; nor klo swarges, in gencral. fimb much pleasure in eath others society. V"hencrer, therefore, we find hmman beings actins topether for enmmon pur. poses in large lomlies, and enjoging the pleasimes of social intereourse, we term them civilisen.' And so of other characteristios. Dissortations Jy J. 太. Mill, art. 'Civilisation.'

When we cone to seck for an exact definition of the term (S, we meet with a variety of ricws. implying that there is a certain compliation in the subject. The original drivation of the worl points to that polish of mamers that ristinguisles the inhalsitants of rities (Lat. rices) from the rustie population; but the nse of the word has sreatly outgrown this limitation. Guizot has given a definition, whieh has lrecome generally kuown. to the effect that we are to inclule in (S. the improvement uf man luth socially and in lis indivinual capacity. But the chief difliculty lies in settling what is improcement. Tliat people are far from agreal on this puint is evident from the use of the phrase, "vices of civilisation." llow are We to distingush its vices from its virturs?

The question is very much simplified by making a distinction between diming at the inprovement of mankind and really fepecting that object. All our inventions and discoveries, and all mur new arrana.
 intemen to raise us furthor and farther above the shware condition; monomly denies this ; but thero maty be the wirlest differenee of rpinion as to Whetler any whe a*W lowne is a real improvenent. If we were ta mestrict the tion (: to the changes intronlucell inte haman life zath a mim to jmprovemont, the alelinition of it wonlul present mo difliculty; Whateas the ralation of this to prompras, or actual improrement, minst iver remain ofen to difference

Leatring ont of view for the presunt the lisputalibe matter, (S. may be ceplaincil as follows: In the first place, there are cortain things bearing decobedly on haman presurvation and haman happiness that are to be exeludiol form the didinition. (!. is mut natural alvintares-such as thase rif soil ambl chnate: or the gromesess of the mental or fonlily constitution of the race; or accidents of fontume fasomine omr centions; on indivinnal dexterity os skill that cammet he imprarted. It is not neccos. sarily haphiness, which is somrtimos present in a low U. anil alsent in a hish. The pormemont choneqs in the comlition intel arrangements of man's life tfected by his oun intelligence amb arotions make up lmman civilisation. It is the artificiel half of the good we enjoy. Nature has given lis so bubub; our own puwers of contrivance give the rest. Genins (in the sense of intellectual uriginality) is the cause, anl $C$. the effeet.

Such being the general definition, the cmmaeration of the separate departments is the emmeration if the institutions of eivilisel life. "I'hese may be briefly summed up under the following toris:

1. The Inclustrind Arts, on the devices fallen upon for tuming to alvantage the material resomees and arencies of the globe. Ierhapus nan one will lie fommi to dix mote that these constitute ral imporements.
$\because$ The Gioremmenf, or system of politicetl organisation. It is hore that we are most forcilly conrinced of the propricty of listinguishing ('. from wholute monnois, or the deries intended for improvenuent from actual improvement. Scarcely anything in the whole paition systom of (irait Britain, for instance, has commanderl mamimoms abpolnation firnt amel last; mealy all the chancess have hom carich arainst reluctant minoritios, and every now and then voices are misen arganst institutions nccounten by the mass of the natiom the very bulwark of mu national noatnoss ; as, for example, the parliamentary control of LLe sovereign anthority.

One ain of social refuntas has lacen to matie the necessary functims of government cumpatible with a larerer and larcer ranere of inhwibual liberty. "The majority of men call this state of things mot merely an intended lut a veal improvement; nut merely (l, but progress. Still, there is nover wating a class of mants that sec mily the disinluatagcous side of this and all rither social fimosation\%.

Commecter? with liberty, we may also pritice the growth of humane sentiment in all classcs, the cobernime power incladed. When we revert to the lamble puashments to whinh 1 wen were subjected in this comntry, not many Eenerations since, not only for ral rrimes, lut nut uf mere superstitimes antipathins as in the buming of witches, we we apt tu foul ashamed of mur own ancostors, aml to condratulate urrselves on baving our lot east in a milider age.
3. The -1rts of social Intercourse, embracing the material machinery of conveyance and communi. cation: and also what may be called the moral machinery, such as forms of jrocedure for regulatiog assemblies, and the minor comrtesies of life.

4．The scheme of Mordity estalished in a com－ mumity＊appertains tos their eivilisation．lint in this also，difference of ripuion prevals，when we emptare different combtriss and times．Morality，in fact， lias always lecen more orr less a part of limbiom， which manst alsus leverwed as an institution $]^{n+1 t a n-}$ ing to civilisen mem，whother of their awn invention on the result of sufnmatural communication，In any ease，there is mixed up with every religion much that is purely human，and which may ba jubsed of ly its temblames to promots lnmam welfare，like any other arrangement of society．This being the suliject of all wthers that men have most differed uron，no eriterim of prorress can lic lat down，becanse mone would be unversally recuivel． The unconsurted parans alive at the fimal establish－ ment of christianity，naturally lielieved that the hmman mimd was thown backwad by that evont．

 phety of st frameis of Assisi. She abambum the phasures of somal life, in whim she liwe time vomply induland, and betenk hersuld ta solitmle, maver, and mystic malitation. Hov immanatim, excitod ley religions ematims, dopeival her into the lediof that whe was in more dinert rommanication with fiol than her fellow-mantals: ame takime her own desires for rivine intimations, she frumbel ath orter of mans in $\mathrm{J} 2 \mathrm{l}=$, and aftop ohtainine a grat reputation for sanctity, dian at Assisi, Ancost 11, 125.3. Two vears afterwats, she was canmised ly Alesander IV.

CLADEld, Sy, Nexs of the Order of, a pediginus mener fommed by St Claire, with the comusel amb
 nuns obsurvel the rule of St Bumenet, hat in log the austerity of this rule was mitigatenl ly it Francin, and again monlitent hermaty in toty. Thmo whon follow the nal ats maditied liy Irban, are called Crbenists: the other and ansterer fortion of tho: sisterhosel, freminnists. 'Jhe order rapdly increased? and compents are mumems to the prosent day in Italy, France belgimm, layaria, Asia, ant Amertio. I'he muns devote themselves chiedy to the: chacations of the jomu:.

CLADEVAUS, a villare in the dinntment of Anke, about ten miles alwse bar sur Aulac. ans the left louk of the river, is remarkalle ats the site of

 it till his Marth in 115 , when he was lomited in the charel. besides the miginal buhdines, at new and aplendial convont was afterwando mectul, and a chureh which was reckoncla a mastiphere of anchitectore, hat was destruyed at the licatoration. There was shewn in the combent a monster cark, called 'st bemabl,' whiche chatained bill tuma. The ablacy, which had at une time a rebeme of IBO.000 lives, was surpmessul at the licworntion, am the extensive bublings are now used ats a workhase and halse of correction.

##  <br> (LAM. Ser ('risus.

(LAM, in Iterallyy, is a term fur an escalup or cockleshell, and is smpered to inticate that the bearer has leen a crusader, or las made lomig voyares by som.
 bivalve monlusk of the South suas, of the family Triduchion. 'Ther shnd is described as "perhaps the most beantiful of livalyes, whether in remarl to form, texture, or colour.' It is therefore a fasemarite
shell for ormamental puposes. It is transverscly ovate, ventrionse, ribbed, roughened with scaly incqualities, white, and spotted with red or purple.

CLAN (Gael. demn, Manx dorn, meaning 'chill]ren,' i.e., descemants of a common ancestmr). This wort beame incorporated with the English langrave at least as rarly as the 17th c.., to mean a borly of men confaleyaten together hy commen ancestry or any other tie, ami in this sense it is used buth ly Dilton and Dryilen. It came to be applied aimost "xchusively the several communities of the Scottis! Highinalers, as divided from each wther tongraphically and ly distinctive surnames. The worl has sometimes been aphlied to thuse great Irikh sents wheh at one time were a sort of separate states; ] Went these, with their characteristic forms of intemal govemment, were completely lroken down by the power of the Enghin prebominaner, hefore the word cathe into familiar use in the English languge. In howtlan, it was usce in the lGth c. te dusignate the frechooters of the horder as well as to the radtic tribes of the Hichants: and there were two chatacteristies ammon to luth-thoir pretatory halits, amb their distribution int) commmitios. ach with a commm sumane. In the art of the sonttish parliament of 1557, for instance, which reyuires limulomes to dind secmity for the comluct of their tunants, it is proviled that those who have their lamds lying in fur himhands werters, they making resibence themsolves in the inlamls, anil then temants and inhabitants of their lands being of clans, or dependars on chicftams or the captains of the clans, whom the landmols are monas able to command. but ouly get their mails (on rents) of them, and no nther service or obedience, shall nuways be sulject to this act but in manner foblowing,' Then follow provisions for coffereng the law directly on the charftains or captains of those chans rexiding in terituries where the owner of the soil-generally the mertly nominal owner in terms of smme useless charter-had mo control. It was always the pmlicy of the ohl law of Southal to rapure all the Ilighfamt clans to have sume resinctalle represintative -a man of rank and sulstance, if passible-wh shand be sconity at court for their soom combuct. (lams that could fimp 1 m scourity were called "broken chans, amitherementars were outhws. whon night be humted fown like wild beast. The
 bay purnel for centuris with savae ingenuity Amone other intlictions, their name was proserner, and suth members of the ${ }^{\prime}$. as embarmured to live by peaceful industry in the Lowlames, alopted derivations from it ; hence we have the names of Gregor, Gregryy, ant Gregorson int Gricesm. The chans are hever treated in the old sents acts with any respect, of utherwise than as nesty of thieves atil cut-throats. The fohlowing passacs in the ant of lisl (c. 112), which virthathy authuriscs any Lowhmar, injurn liy any member of a 1 , to take

 unst, certanly a very highly coloured accome of
 Hith contury. 'The saits chans of thiceres for the that part are companes of wicked men, conplal in wiekelmes hy weceasion of their sumames or near Awillings tom thor, of through keeping socinty in the ft or wompt if theft, mit suljected to the matinar romsay of justies, nor to ony ame lamaral that will make them answoralle to the laws, hat Fombonly dwollines on sumtry men's lamis asfanst the: gome will of the ir lamlonds, whercthrough true mon "lprossel ly them can have no rencil at the hamblat of the thas, lant for their defmee are
oftentimes constrained to seck redress of their skaiths of the lail clan, or such of them as they happen to aprehent. Likewise the hail elan commonly bears feud for the hurt received by any nember thereof, whether by exccution of laws, or ordor of justice, or otherwise.' The IIighiand cians are often carelessly spoben of as a fendal institution, hat in reality their distinctive charater camot be better understood than ly keepint in view some beculiarities which set them in complete contrast with the femlal institutions of Britain. All feudality has a relation to lam, from the serf bound to the soil through the free yassal who possesses it, up to the superior or feudal horl, who commands services out of it. The descent to all rights connected with it is hereditary. Among the Highlanders, on the other hand, the relation was patriachal, and had no connection with the lam, save as the common Arelling-phace of the trile It often happened, as the acts above quatoll explain. that the heal of a ( 6 . and the owner, acerrangs to fendal law, of the estates occupied ly it, were two diferent persons. Clans dil not acknowlelse the purely fandal hereditary minciple, and wond elevate to the chefship a hrither or an mehe, in preference to the son of a deceased chief. It is a curions illustration of this. that in the romion of 175 , the notorious Lord Lovat, who liat just returnel from France, being anknowlelged lyy the C. Fraser as their chicif drew them away from the reled army, to which the proprictor of the Fraser estates had endeavoured to attach them, and arrayed them on the government sill.

CLAN MACDUEF, Law of, was a privilege of immunty for homicide ancinatly enjoyed by those Who conid cham kimbell with Machulf, Eatl of Fife, within the ninth degree. Manduff's cross stood on the mareh or bonnlarylectwen Fifeand Strathearn, above Newburgh ; anil any humicite possessed of the right of clinsing, who couhl rearh it, and who gave nine kye (cows) and a colpintash (or young cow), was fire of the slaughter committed by him. (Bulls Dictiontay).
(GANDE'STLNE MA'RRLAGE. A mariage contracted without the dur obscranace of acelesiastical ceremonics, eyen where concealment was not the chine or only olject of the parties, is renerally called a cland stine marriage. But, in Fortlani, a distinction is mate between marriages which are clamlestine, and those which are simply irrgular. . II marriages which are not celchateil ly a clemoman after proclamation of hans are irregular, and such of these incernlar marriages as are cutared into lufore a prion professing to act as a mbingus colbontor, withont being a ministor of rigion, are chandestine, and expose the partios, the celdmator, and wituesses to certain ponaltios. Thes punaltion may he recovereal hefore justicers of the peater, on complaint loy the tiscal ; anal the proce diner is mot withont some anlyature to the parties, tes the rusidetion is recoivel as evidene of the mariag. In the eye of the law, Hamhetine am irrequla marriages in sontland an as valin as thase in tha face of the chureh, provided they low of sum a kind as to estahlish the consent of the partise to hocome man and wife in puint of fant. bint, motwithstanting the existence of this ruld of the civil law, marriuses in sootland, in may other form than in focie ectesior, are pradi"ally of very bare oremmene ; and Ir Lashington shewed little acmanatanoe with the sencial combition of that comatry whon he stithol. before a select commitere of the llonse of C'mamens, in 1549, that it was 'rarely that sicoteh marriuges took place in the face of the chumeh, at loast not sery often, so far
as he knew.' In order to put a stop to Englishmen crossing the border, merely in urime to celebrate itreguliur mariages, it was enfeted by 19 ans 20

 one of the parties has liverl in Geotland for the "L days next preceding the marriage, or has lis we her usual residence there at the time:" It is further enacted, that the partios to such it mamiomo may apply within thres months, jomfly, to the sherill of sheriff-sulastitute of the comnty, for a warrand to register it. lifon rronf that whe of than
 lamb, and that they luave contracterl marritere, the sheriff is to gratat a warrant to tho remistarar of the parish to recerd the mariage. A certities engy of the cutry, signem by the registma, which be must give for 5 s, is declated to be evitunce of a valid mamiage.

CIANDESTUNE MORTGAGT, in lindmel, is a sceond mortgige of lamls, already mortgiged fur a valualde consideration, the first monterage lecines concealeal, or not cliscovered in writing to the seconit mortgagee. It is povided ly 4 atal 5 Will. anl Mary, c. IG, that in such eiremmstandes the munt. gager, or person so mortcraging his lankes, shall have no relief, or equity of redennition, against the sceomd mortginge.
 the birt-catchers of the sonth of Enghtimh, whosunply the London numbet. It consists of two ebual purts or silles, each about twelve yards long, ly two yarls and a half wide, and cael having a slicht frame. These are paced parallel to me anothor, fully four youds npart, and ly an ingenious comWivince, the pulling of a stringer is mathe to chace them upon one anothor, so as to corro the oblome space between them. C'all-birids, cither in snatll cages, or fixed by braces, are placed about the net to decoy wild birds to the spot.

CLA'PPERTON, Jtiari, one of those Pritish frabellers that lad the way in explumis the intemor of Africa, was bern at Anman, in the county of Humfries, Sootlant, in 1788 . At the age of 17 , he went to sea; aml being impressed into a man-ofwar, he distinguished himself by his services, and was alperinted to the rank of lientenant. [n] 817, he retumer to lingland on lalf-1ay: Jlaring become acqualinted in Elinhmeh with $\mathrm{Dr}_{\mathrm{r}}$ Oulney, who was about to promed to bomm as biritish consul, the thunshts of C. were dirceterl to Africir ; and govermment alluinter lim anl Lientenant Denlian to acompany Onchey in an expluming expelition into the interion if that continent. After a slourt stay at Tripoli, they started in Febraary 1 So: for Parm, where Dinham separated from his compranions, in orier to cary his researeles suathwat. C: procerded westiond, accompand by Onelney, who dies liy the way He still lashed un alone as far as Siakkatu, but not heing allowed to procech further westwarl, he retraced lis steps, and, in company with Ienliam, returned to Englimel in 182.). 'The journey had dme much for the knowlerles of Africa, hut the envat geographical problem if the course of the Niger was still much in the same position. To solve it, if possible, C-the rank of commander !aviar theen conforred mon him-started arain it August 1825 , in company with Captain learec. R.N., Mr Diekson, aml 1) 1' Morrison. He had also liblawd Lamber as his confidential servant. They commencer their exploration into the interin from the light of Benin. His companions died early on the joumey, lunt $C$. and his faithful attembint Lander reachent sakkatu. Detained here by the

Sultan l'ello, the roxation joinesl to thu: hardshipy of the jommey su allisetal lis bealth, that he died at (!hangary, ne:ur Sithkatu, Apral 1:3, $1527.1 \%$ was the first Burnpron that punctrated from the limpt of Bernis into the interion of Africa, foul followerl the course of tha Nien for a preat waty. His attamments in oriental litemature and biblical knowledge procured for lim the legree of LL.D. fron St Andrews university. 'Ithe lhard of Commissioners on the Public liccorts selected him to edit Rymer's Fuderer. He also eclited and abridged several other worlis. but the geat work of bis life was his edition of the Holy Scriptures in English, ilhostrated with a commentary and critical notes, into which were compressed all the rosults of his Faried readine. The first volume apmared in $\mathbf{1 S 1 0}$. the eighth and last in 1826. C. died 1ugust 26, 1532.

CIARkE, Enwirid D.rier, known as a traveller aud anthom: was bom at Willinerlon, in sussex, in 1769. He stulien at Cambridge, and from 1790 to 1799 was employed as tutor and travellin's-companion in several nublemen's families, and made the tow of Great Britain, France, Italy.太witzerland, and Germauy. In 1799 , he set ont (n) an extensive tour with Nr . Cripps, a young ]nan of fortme; they traversed Denmark, Norway, Sivelen, Laplund, Finland, Lussia, the country of the Don-Cussacks, Tartary, Asia Dinor, Syria, Euypt, Irreece, and did not return to England till 150 . In conseruence of his donations to the miversity of Camlirime, (. received the degree of LL. D. In 1sirt, he beran a comse of lectures on mineralngy and the university established a mofescorship ut that science in his favour. He presconted to the libuary of Cambriage a number of valnable marbles collected dmoing his travels; among others, the colossal statue of the Eleusinian Geres, on which he wrote a treatise in 1803. England is also indebted to hina fom the possession of the famons sarenhlugus witl the inseription in three languages. On this he wrote a treatise: The Tomb of Ilvirundor, a Dissitution on the Surcophagus hromylt frome tecormblite, aml now in the British Muscrm" (Lond. 1805). His "Travels, of which the first rolume was puldished in 1810 , and the fifth in 1819, were received with extraombary favour. An ablitional volume, containing Lis Treetels throufh Denmerk, sievelen, Loplend, Sormag, Fialend, winl, Russict, was pulalishell after his death (Lond. 1823). A complete adition of bis travels ilpeared in 11 vols. (Lomi. 1819 -1821). The muiversity of Camfridge purchasol his Greek and oriental mamencipts, amoner which is the finnoms Cobex of Plato, which (. discoverol in the island of latmos. C. died Hiurch ? J siza.

CLAY, Cassits M., perhaps the most thistinguished and eloguent of the oppoments of Americau slarey, was born in Mablison countr, Kentucky, in 1810. He has lomig taken a very netive part, both from the platiom and through the rress, in promoting abolition riews; and, indeed, he may be almost regarled as America's representative-man on this pucstiou. His speeches, \&e., edited hy Horace Greeley, were published in New Sork in 1545.

CLAY, Hexpry, an American statesman of some isntinction, was forn April 1:- 1777, in Hanover conntr, Virginia. He early devoted himself to the law, and fixing his residence at Lexington, Fentacky, soon obtained a lucrative practice and political influence enough to lre elected to the state lanislature. In 1806 he was elected to Congress, tut acrin in 1809 he was chosen senator for a term if two years. In lSIl he was sent to the IIns: of Furpsentatives, whore he was immediately clectml Speaker. A strong aloncate of nationality, hex demonneed the claims put forth by Englame ins Ln rigit of sarch; he was a stremons supporter of the wir with that country and in consequence was sint, in lsly, as one of the commissioners to sign the trenty of peace at Chent, where his acutemess securad fur America sume adrantages. On his roturn, he exeatell all his talents in farour of the imblemence of South America, and laboured hari to eralicate all Enuopean influence from the American contiment. C., howerer, is best known as the author of the famons 'Missouri Compromise,' restricting slizvery to the states south of $36^{\circ} 30^{\prime} \mathrm{N}$. lat. ; aud also for the compromise of IS50, known as C',s 'Omnibns' measure. He died Jume 1S5̈. C. bad umbombed talents, lut he was by no means a eunlprehensive statesman. He was by far too fertile in compromises to be the author of any noasure conforing lastimo benefit on his comntry. Tle was very popmar elving his lifetime, and was two or thare thmes promend for the presidency, an lonomr, howewer, which le mever succeded in解timing.
(LAAMCORE (meming 'the great sword'), the (iatelic name for a kind of sword at one time much userl, but not so well known at present. It haul a domblemad hlade, about 43 inches lons Iy 2 inches lirond; its handle was often 12 inches lomg, and its weright 6 or 7 Ins.

CLAZO'HENE, ne of the twelve cities of lonia. It was oriminally built on the flemmean Gulf, westward from Smyma; lut the inlabitants hambur, thrangh fear of the Porsians, thed to a meind luntring islet, and Alexandur the Great having conwated the islet with the mainland loy a dike, the city suhsorpuratly extombed over the peninsula thus fumbel. Jt is now called Vmrla.

CLEARING-DOTSE, Tine Raflway, is an assumation in litutnd to rmalde railuay-cmananos in Endand and Foothun, fo vary om, without
 animals, minerals, and grouls phasing ewr diferent lines of ratways, and to athrel? En the trathic the same farilities as if the differnt lines hat belonedel bunc company. The arranemonts are called 'the charines system,' am are combeted ley a committoce apminted hy the dircetors of the" compmies who ari parties to it. The hensiness is carried on in a hailimes in Seymour Strect, Lombon, adjoining the Euston Station. The assuciation is regulated ly act of parliament, 13 and 14 Vict. 33
 Act, 1s50, Any railway-crimany may apply fir admission to the systm, and, on heiner accepted, hecomes a party to it. 'The comprnies are each rapesental on the committee ly a delurate. Ten wlegrates form a fuorum. The committre hods stated mectines on the seenm II. Ineshay in darel, June, September, and Docember in every year, and at such othor times as may be fonm necessary: The accoments of the clearing-system, aud the mances due to and from the several companes. are settled and aljustmi liy the sucretary of the committee, with appeal to the committee, whose decision is fimal. The cxpenees are iffrayed ratombly by the companies. The clerks at stations of the various crompuins seal alistracts of all trafice monthly: Thu cullecterl passemer-tickets, an! several wher details, are forwarded weekly. Nienahronem are emploved by the $\therefore$ who attend at ench milway: jumetim, amb watch the arrival and departure of evary tran passims the junction. They wote the mumine of every carriate. horse-hon, wanm, ban, and sheet or wasm-errer on the train, anst aboall damaged stock, amd make weckly retumas. The destination of each wamn is also notenl. Thereturns from the compranies' stations, tugether with thusio of the number-min. enalile the accounts to le maic ap at the C... aml. after examination, the companies are hedited ame credited as the ease may be. I Ahtorer and creditor account is sent irun the C. monthly to each compry, shemins, on the wo side, what the compay has to poceive from others as their proportion if throuth passenter-fares through ponds rates and mileaco of carriaces, wagons, and shects, and, on the where zine. What the company bas to iny to whers ont of manics dram liy them. The halime is struck, and. if a cainst the company, a remontance must lwale. If the batance is on passenger-traftic, it is due tire days after the date of the $C$ : adrice. The ather halances must be paid within twenty-three days. laterest at the rate of a per cont, fur ammai is ehargel on outstandinc halances. Thu cust of maintaining the $\mathbf{C}$., with its wificers and mumerous clerks and number-men, is apportimed anmast the recpective companies(1.) In promrtion to the number of entries at the crelit of eah in the miluage account; (2.) In the ratio of the mumbrof velucles and sheets recorlad ? $y$ the
number-men: and (3.) Aecording to the time oecobien on the acconuts.

Reculations are pablished anmally by the (' in Janmary, for the gulance of the different comlanics in connection with the system. These determine the principles of classification of goods. dirision of rates, terminal allowances, payment for loss on damage of gools, and other points. A committee of general manacers is apmintel, whose luty it is to ablate wh clains for hamages to rolling-stock. A committee of gands' managers arjndieate enses of disputed liability which rwate to grocts tratfic. A committee of coaching sumbintements jerform a similar lnty with reference to conching or passumer tratfic. The milente of carringes is also rembated, leing three-farthings per mile first chass, and : halfpeny for secomb. A varyins rate for wagons and sheets is allowed aceming to distance, the lighocst charge for distanes under lot miles being oue half-penny for box wasons, $\frac{3}{2}$ of a penny for open wasons, and $\frac{1}{3}$ of a permy for sheets. if carriages are detainel leyond ane clear day, demurrage is charect at the rate of 10 s. prer day fio dirst-chass carriages, and 6s. fir secom-chass. If wagons are detainel beyond two clear diys. $3 \%$ it day is charced. Nheets, after two days, are charede $6 d$. for the first day, ant 1 s . per diay after. The terminul allowances are 8s. Gid. per ton in London, and 4.s. in the comintry for cartel govis; 1s. 6\% per ton when nut carten.

In lsin, the number of companes parties to the clearin-system was 117, amb the amonnt of business of an intricate kind which was involved may be judgel of from the forenginef particulars. In short, the 4 . system of Great Tritan is a rast oreanisation, mbpten, in an extramdinary ilegree to save trouble in acomutine, as well as to perent pety disputes, ammy the individal compmics comerned. The very ciremmstance of all the usem passenger-tickets in the kingelum beine trausmitted tor common centre for arlinstment as to the clams of one company against annther, affinels in itself a romakalde instance of an incenions system for claburating simpheity out of what would almost apper a commercial than. There is it simplar railway ('. system in Irelaml, with its hemlunarters in 1)ublin.

 ming, shape his father was a physician. At, the af As, he mitared the whe of Minmites, aml ato 1 philongly ame thendery, which he then

was serking to diminish his infuence: the Iomans themselves were discontentel. C first set about reconciling the monarchs; he sent a nuncio to Lishon, suspended the bull In Cona Domini, and entered into necrotiations with Spain and France. After several years of negotiation, he issued, 17:3, the famus lrief Dominus ac Redemptor noster, suppressing 'for ever' the society of the Jesnits. The motive assisned in the brief is, 'regard to the peace of the church.' From this time his life was made miserable ly constant fear, and his strength gradnally gave way. He tied of a scorbutic disease, September 22, 177. C. was remarkable for liberality of mind, address as a statesman, sound learning, and miluess of character. He cherished the arts and sciences, and was the founder of the Clementive Museum, which, ly the additions of Pius VT. and Tius VII., becarie the chief ornament of the Vatican.

CLRMEYTI, MLZID, one of the best of pianists and comporers fur the gianofurte, was born at liome in 1500 or 175. His skill on the pianoforte, when only 13 years of age, secured for him the notice of a Ir leekfork, an English gentleman travelling in Italy, with whom C, went to England, and in whos family he remained for several years, studying the woms of the grent composers, and where he also andured an extensive knowledre of literature: His - Unem n' (composed in his 1 sth year) is considerea the matal on which the whale modern pianoforte simatas have been fomiled. Ifter travelling on the contiment for some time, he rotmoed to Englamel, where he ohtanned the highest reputation as a teacher. Pecuniary nisfortmes indueed him, in the rear 1800, tio commence lmsiness as a musicsulprand mamfacturer of pianofortes. He died in 1. moton, March 10, 1932. His compositions, mostly pianoforte somatac, are full of pleasant melody, and armued in masterly style. For students, his classical Introturtion to Piannforte Playiny, and his last work, the Grodus al Parnassom, have 1 wa highly recomuentod. His style of phaying was hriliant. and in improvisation he excelled all his. preducessors.

CLEOME:DES, a firek writer on astronmm. Nuthing is known regnding his life, nor the period when he fiomished. His treatise is entitled The Cimentar Themy of the Mecurnly Bolies, and is ramarkahle as conitaining, amil mueh error and innoncu several truths of moderu science-sueh an the splerical shape of the earth, the rerohtion (if the moon alunt its axis, its rewhation romad the cortl. Se. ( $\because$ 's treatise was first printed in Latin hy (am. Valla (Ven. 1998): in Greck, by Conral X̌ubuins (1'ar. 1599). Th10 two latest editions are those of Tamus Bake (Luted. Bat. 15:0) and C. C. T. Schmilt (Leip. 1532).
('LEONS, it fanms Athenian denagogne, who tharishol durines a patt of the Peloponnesian war, Was mimably a tamur, but haviur a strong bias towarty polities, ho errabally alandoned his busimesa and loweme the champing of popular rights.'

 for bir, along with Demesthemes he commanded an "xpelition arainst thuthond of Sjhacteria, which wat Lemponed hy the laceldmenimes, and. much to the shemise if nory mo, sucombed in reducing the plawe thut the whele morit of this floed is nsually attrinated to his callentuc. 1". himself, howecer, was hichly datid with his sneerses, and his comentry-

fancied that le really pussessed militury ginius, for in 422 .1. C. he was sent to "中unse brasmaw, the Spurtan gencral, in Macelonia inul Thrace. on his way thither, he took Thomos. a town in which fomsidas lad leit a small urriman, ant aftewords Gialcpsus. Sout the great dresign of tha campaign was the eapture of Amphipolis, whop lhasidits was stationed. C. somerwhat relnctautly advan'ed. and began to reconnoitre. Whil. hee was so hunge, Jrasidas mate an unexpecteat sally, amd in thathette which chanel both leaders wne sliun. 'Ihe Athesuish army, however, was ilcfeaten, and indiued to retreat. The eneral opinion of $C$ is mot favomable. Ile is painted both ly Thucydiles and Aristophanes as an ignorant, vain, blustering, and cowarily moboctu. Aost nodern listorians have accepter this estimate of the man; but Grote, in his / Iistory of (irnce, las thown very ennsiderable doult on its truth, aml las laboured to shew that he was the rough hat resolute elarmpion of the people, and that his character tas been vilificel and alused ly Aristophanes, who was-there can be no doubt-violently aristoeratic.
CLEOPATRA, the daughter of the Ergtion kiug, Ptolemy Auletes, was horn 69 в. 1., ant, according to the will of her father, shonld have inherited the throne along with her brother, I'talemy Dionysus, who was also her lusbant. Her claim, however, being opposed, Julius C'esar came to Alexandria, 48 Br . ., to interpose in the quarrel, and in the Alexandrian War, Ptolemy Dimysus foll, and C., who was now married to her yonnger brotber, Ptolemy, a boy of eleven years, was established upn the throne of Egypt. She bore a son to Casar, who was named Cosarion. On her visiting Rome, C'asar received her with great magnifieence and placed her statue in the temple which he hai built to Venus Genitrix. In the civil war, after C'asar's assassimation, C. at first hesitated which side to take. After the lattle of Plilippi, Antony summoned ber to appear before him at Tarsus, in C'ilicia, to give account of her conduct. C., who had in the meantime got quit of the youthful Ptolemy liy poison, appeared in the character of Venus Anadyomenc, and so fascinated Antony, that he evor afterwards remaned devoted to her. They spent the winter, 41-10 в. c., in Alexandria, in revelry; and Antony; although he had in the meantime maried Octaryia. the sister of Octavianus, returned to the cmbraces of C., Who met him at Laodicea, in Syria, 36 Is. c., and accompanied him to the Euphrates. His gencral residence from this time was with her at Alexamlria. He bestowed upon her and upon her children ereat estates, which, however, he lanl no right so to dispose of. Upon this aud other accounts, he became the object of great detestation at lome, and war was declarel against C., Antony being nuw regarded as her general. At her instigation, he riskel the great maral battle of Actium (q.v.) ; and when she lted with 60 shilis, he forgot everything else. and hastened after her. When Octavianus appearel before Alexaudria, C. enterel into private negutiations with him for her own security, which treachery lecoming known to Antony, he rorred revenge; but a report coming to him that she lani committed suicide, he thonght it impossible to survive her, and fell apon his sword. Mortally mounded. and learning that the report which he had heard was false, he cansel himself to be carried into her presence, and died in her arms. Octarianus, by artifice, succeedea in making her his prisoner. Failing to make any inturession upon him, and finding that he spared her life only that she might graee his trimmph at lame. she took poison, or, as is sail, killed herself hy cansing an asp to hite her arm. Hur death took place in

The first womhl, like a samb-ulase, give only an wecurate mosur" of the tim" mompi in is the escape of the while duint: of a chorter than it woud la an inaccurate measmes as the possume muker which the escape takes place at the commencement is greater than at any instant ther: aft, $r$, and constantly liminishos with the locight of the: fluad colmm. In the secome, the flow must be nearly uniform; and if the wator be reseven into a unitorm gradnater tare as it escapus. we hase a tolerably goor clock. The rate of the flow, however, is affectell by temarature and hammeric persoure. The C. is supposel to have lown usem anmose the CDadeans. The fomans "moner it extensively. The invention of the pembulum has sumpendal it in malern times.
('LlERC, Jehn Le, bettor kimman as Tominemes Clentors, was born at fenera, Xaroh e!!, 16ir, where his father was a ceergman. From an carly puriod, he shewed a particular aptitule for the stuly of aneient languages, and in this department he is still a conspichms name. He also pain great ata., tion to thenlugy, and his nunerous contromemb writines lomelit him no mean reputation fonims his lifetime. Before he was twenty, ": had imbinal heterodox nfinions in religion. In 108s, he went as tutor to Crenolle, whire he remane for tur $y$ cars; in 1680 . he retmon to Granera, ant was appointed to the elerieal unce. All the white, his olgections to the accepten theolog of the lay lan? leen growing: the worls of Curcellions amb of Eriscoprius cenfirmed this antipathy, aud now he apheared as Liberins de St Amore, the writer of eleven Letters against the Ermas of the Mompastic Theologans-in short, as the partizan if the Inteh liomonstrants. In the latter part if 1691, C . left Sumur, whither he had gume to jerfect his French, and went to Grenolle, and thence to Jamdm, wher he proached six months to the sapot cuncreva tion. Finally, he was apminten lannsion if Philosophy, Classical Literature, and H1, Jreers at tho Lienonstrant seminary of Amsterdam. ILe died Sth January 1736. C's priting are very mumerona; but his greatest service tumsterity was the maldi. cation of a quartoly, the maldithequ. Lnirerselle et Historique ( 168 s - $-1093,2 \mathrm{I}$ vils., in 8ro), foilowed up ly the Bibliothique Choisin (170:-171:3), and the BiMhothique Ancirn", at Momerne (171t1727). Other worles of ( $\because$ 's are-Ifurmonies Everngelica (1700): Thulumtion dle Nunten Tisternont ame des Totes ( 1713 ) ; Ans ('rifiat (: mols. 1712-1730);
 are Socinian in their tendeney. C's rationalism is still more manifest in a work entitled Sentimens $\boldsymbol{s}$ quelyues Thoporiens, ite Hollande muchand l Histoim Critique du liaur Tostament, in which the special insparation of the Serigtures is durat. His mations of several if the ancitat classics frove hith his luamines and obllatin.

## CLERGY-CLERUS.

CLE'RGY (Gr. derow, a lat, an inleritance), a term very denerally apmied tow the ministers of the Clhristian relnion, in contralistinction to the Leity (4. v.). This nse of the term is very ancint, anm? appars to have rrahally leewne meralent, as the ministers of religion mure anl nome exclusively, insteal of the nembers of the Christian (harch equally, lectan to lee recanded as Goml's "heritase"
 to him, aul pecaliarly his. The distinction between the $C$ and the laity beane more marked thromb the multiplication of othces ind tithes anong the ( $:$, the aserintion $t$, them of a place in the 'hristian Chureh smilar to that of the prients and Levites in the Jemish Church, with peculiar rights and privileges, their assumption of a peculiar lress anol of official insignia, the growth of momastic institutions, and the introluction of colibary. In hamony with the nutions on which this distinction is fommed. is that of an implelble or ahnost inmelible character derivel from ordination, so that a remnciation of the elerieal offee is either virweal as an imposibility, or a sort of apostacy: These untions in the ir lighest degrece lebong to the thureh if lime. In the Protestant churches, the distinction between (: and laity is mach less wine: and althuch tha same terms are often used, it is rather comveutionally than in ther full signification. The employment if uthechal rones lis the C . precelen their assumption of in peculiar ardinary dress aml is not so intimately eonnected with any pectuliar pretrasions. Amonde the privileges acemidel to the ('. ley the lioman emperors, and in the mildile an's, was exmption from ciril othees; among the rinhts asserteal by them, and whech cansed much dephate, was exempition from lay-jurishiction, arm in cases of felony The C. were thstingusherl into the himhes "' and the lener 6 . the latter inchatmes janitors, acolytes,

reason of the motion continually taking place in the fluid sulstance-and affecting greater depths, the infuence of the ocean, of seas, and of sreat lakes, is very powerful in maintaining a weator equality in the temperature of the atmospher. Thus maritime places, and particularly islands and peninsulas, have a more equal temperature, with less diversity of the extremes of summer and winter, than more inlam if continental places otherwise similarly situatel. The eflect of the sea is modified by may circumstances, and marticularly ly currents, of which the Gulf Stream ( 1.5. ) affords a motable instance, the leated water eonveyed ly it from the equatorial to the polar regions haviuy a great inthence on tho C., particularly of the nortl-west of Eurge. The temperature of Eurnge is also in part denconlent on the warm south winds. which have absorbed heat from the great samly deserts of Africa ; and over the wom 'generally, atumsinheric currents must be regarded as exercising even a greater influence on C. than veeanic currents. The guantity of rain or sumw that falls in the course of a year, and the times and maner of its falling are circumstances which have a areat effect on climate. These are circumstances much indnenced liy the distribution of land and vater, and lis the clevation and character of the surface of the land. which, doubtless, alsu intluence electric anl other meteorological comditions, less umlerstuved, but certainly not urimpertant.
The relations of $C$. to regetation are determine? not uncrely ly the mean aminal temperature, lut in a great measure also-and, with regard to many pants, entively-ly the duration and C. of summer. Thus, maize, which may be mentioned as an important example, succeeds well in climates of which the winter-coll is severe, the summer season alone being sufficient for its whole life; whist, on the other hand. such plants as fuchsins, some kinds of laurel, and even the common hawthom, which succeed well conough where maize would scarcely put forth an ear, would perish from the colder winters of comotries where it is profitably eultivaten. The jwhar limit of particular species of animals, except those which byhernate, is generally determinel ly the degree of winter-cold which they ean bear withont injury.
longs and marshes exercise an unfavourahle intuence on Cowline thw air and cansing fags, as clay-smils also tosmme extent de, throngh their retentivencss of moisture ; whilst marshes of some kinds, amd in sume situatima, ahome in exhalatims very unfarmuble to health. Similar romarks apply to large tracts of forest. The clearing. mainame, and cultivation of land hase gencrally favonrahle rhicets mi ( $\because:$ althmant mantations are often bene. ficial for shluter: amd a tom complete removal of natural forests may prewnt the depmsition of moisture from the etnusphere to such a degree as to cause droughts, a result strikingly excmplified in some of the smaller Wist India Islands, and the tumbency to which is sum to be manifesterl on the Wrat sale in the castern part of the continent of Sortle Ameriad.

 in Ananst 17.51, with 20 (on Fingish infantry and
 homalions rnterprise tu ationk Areot, a city of

artillery, the decisive lattle of llassey hal been fought, and buglish pwow establisheel on the ruin of that of prance and the native princes. The daring displayet in the capome of Areat, and tho intruplity ame fortitme exhihital in its defonce ly C. and his little hamd. minuent t" eno men. asainst an anny of $10,0 \mathrm{OH}$, was the fommation of bugland's subsequent greaturss amd glory in ladia. O's name henceforwand was at tower of stroneth in Imlia, where he was suruamed ly the natives 'ruhert Jung, on 'the Daring in War.' Victury mardhed with him alike asainst mative warrins, Frenelh, and Butch. Unserupulmes as to his newas, he womld nudoulterly have fomad himself involved in many diflientios hat not his grestimalde actions bewen invambly crowned, and thas-in the lax polition antions of the tine-justified, by snceess. Nothing remaining for him to do in Imilia, he returned th Encland in 1760, and received the wam thanks of the Company and an Irish pecrase from the government for his services. His wealth, arisinge from shates in various spoils, presents and srants of territory from native pinces, was cnommus. After his ieparture from India, the Comprany's affins, through the dishonesty of its servants, high and low, fell into a state of the greatest enufusim, aul C., in 1761, was chosen to set them right. H10 proved himself as competent an odministrator as he was a warrior, Unermpromising and resolnte, he hore down every opmsition to his plans, all the more sternly that he fomed it in some cases assuming th., form of threats. In less than 18 months, he hand 'restoren perfect onler and discipline in both the civil and military services, and lronght lack prose perity to the well-nigh ruined finares of the compary. He returned to England in 1767, and was received with the distinction to which his important services entitled him. But the energetio way in which he had righted matters in India, gave offence to those who suffered from the sumpession of dishonest practices, many of whom were not withont tonsiderable influence in the mother-country. This influence they empluyed to stir up ill-feeling against C.; and his mocedings in lndia were made the sulject of animatrersion in parliament in 17, and in the following year, matter for the inguiry of at select parlimentary committee; who, however, failed to find that C . han acquired his great wealth by abuse of power, as lis enemies hall asserted. The form of acyuittal, however, was mot quite satisfactory to 6 , who never got over the disgrace implied in the trial; and ended his life ly suicile, November 22, 1724.

CLÖA'CA. See the artiole Breds. A similar anatomical arrangement is found in one ortur of mammals, the monutrematis (1. v.), in all reptiles, and in many fishes.

CLOACA MA'XIMA. This was a suhterranean passage of vast extent, ly which the whole, or a great part, of the filth of ancient Fome was conseyed to the Tiber: Imains from the lower parts of the eity around the Formm, and from the other valleys, were commencel by Tarfunius Prisens: but the construction of the C . M. is attributed by Liry to Tarquinus superbus. Niebuhr is of opinion, that it was at first intended to drain the valley of the Form ; but it appears to have been sulserpuently extended, and comentel with the smaller cloace. Fumning from the Furum last the temple of Vestro. it terminated at the Tiler. where the month of it is still risible. It consistel of three large arches, one within the other. The space enclosed by the innermost vallt was upwarls of 13 feet in wiltin, aut of a corresponding height. The arches were built of large blocks of stone, tixed

CLOCHEE'N, a town in the sonth-west of Tiplerary connty. It miles west-sonth-west of Clommet, in lat. $\mathrm{S}^{3} 1 \%$ N., and lone $7^{3} 5 \mathrm{~W}$. Pop. 2sist. The rich limestone soil of Tar vale poduces fine wheat erop, and there are extensive flour-mills here. Six miles north-west of $G$ are the fromons limestone caros of Mitchellstom, with beantiful limestome concretions. The caves consist of galleries ancl samlts, suo ly 570 feet.

CLOGHER, a Tecaycd episcopal city of Ireland, in the sumth of 'IVrone, on the Lamby, a tributary of the Blackwater, $I 04$ miles morth-north-west of Hublin. The see has lately heen wited to that of Armagh. St Patrick is sain to have bren the first bishmp of t., in +12. Pop. 1000.

CLOISTER (Er. cloitre, cluzstrum, an enclosure), a covered latssane, on ambulatory, ranang rowd

Cluister:
Kitwnel Abley.

 tha: vhould at ho. en that thay became a row of
wiulows, as at Gloucester. Cloisters were used for exercise and recreation ly the inmates of the religious houses. Ocersionally, when wholly glazed, they had cells or stalls for study on the inner side; ami very freguently a stome-bench may still be scen, which rums along the smae side. Many of the Jarger monasteries had more cloisters than one : and so characteristic were they of the religious houses, that the term C. cane to be used in a general sense for the whole establishment, which is still the sense of the word hlostor in Gemman. See Monastery.

CLONAKI'LTY, a town in the south of Curk county, Irelanl, at the heal of a small inlet, 26 miles south-west of Cork. lts chicf export is grain. Pop. 3300.

CLONES, a market town of Ireland, in the connty of $\lambda l$ maghan, 12 milos west from the town of that name. It is situaterl on a rismg ground on the lugh-roul hetween Monarhan and Belturbet, and near the Ulster Canal, and is in general well built, aml has some ancient remains, including the mims of a monastery, dating it is sail, from the bth e., and of a ronnd tower. It has manufactores of linen, corn-mills, ant it lirewery, and is the seat of a poorlaw union. Pup. 9ッ?

CLONMLiL (Vale of Honey), a parliamentary and municipal horongh in the south of Tipperary county, with a little in Waterford, on both banks of the Suir, which bere divides the counties, and on two isles on that river, I 4 miles sonth-south-east of Cashel. It chiefly stands on the Tipperary or north sile of the suir, and on one of the isles in the river. One of the bridges over the Suir has 20 arches. The main street is a mile long, and paralled to the river. In the vicinity are monntains 1700 to $\because 500$ feet hith. Pop. 15,336. C. returns one menulser to parliament. It has manufactures of cotton, and large flowr-mills. The chief exports are agricultural prowhee and cattle. Parges of 20 to 50 tons ply un the suir to Waterford. C. had formorly walls, of which one gate remains. In $\mathbf{I} 650$, Cronwell hesieged the town, and demolished the castle. C. gare birth to Storne and Lady Blessington, and was the chief scene of O'Brien's attempted rising in 1845. Here Mr Bianeoni first established the cheap and rapil car travelling over the southwest of Jreland; anil C. is now a great centre for Irish tourists.

CLONTA'IEF, a town of Ireland, in the comnty of Dublin, almat : $:$ miles eest-north-east of Dublin city. It is much frequented during the summer menths for seb-bathins, ant there are many bandsume villas in the ricinity. ( $\because$ is celebrated in history as the phae where, in 1014, lirian Borombe (4. F.) wom a rreat victury over the Dines. Pop. stater at lexween 2oon and 30100 .

## CLOSL-CLOTHING:

Ho returned to Paris, constituted himself the 'orator or alvocate of the human race,' and presented numerous petitions to the National Assembly. On the 19th of June 1790, he appeard at the bar if the Assembly at the head of a mmber of strangers, dressed in the costumes of difiorent nations, as the representatives of the whene arth, and presentad an address of thanks for the stand mathenganst the tyrants of the workl, and a melgest that all the strangexs then in l'aris shondel lu: made Frencls citizens. As a member of the Constituent Assmbly, he offered to raise ar Prussim corps, to be callud the Vandal Leginn; propersed to lay a price on the head of tho Duke fif limaswick; called the King of l'russia the Sadamapahs of the north; and enlogisel Coumt Ankarstrom for haring issassinated the king of swedea. What is singular is, that these extravafanees were received often with stimens of aphlanse. Ile called for the apotheosis of Gutembery in the Panthou, as the 'creator of the word,' amblalso for that of an arostate priest. On the aceasion of the pencral armament of trance, he deposited 12,000) francs on the altar of the comatry. In 1792 he wats elected a member of the Convention, and continued to weary the house with his extravagant motions. He hated Christianity no less than royalty; deelared himself the cuemy of its founder; and, as in adherent of the worship of Reason, preached downright materialism. At the trial of Lonis XVY., he gave his vote for death, 'in the name of the human race,' and took occasion at the same time to pass sentence on the king of Pmssia. Some time after, on the motion of thobespierre, he was excluded from the Cab of the Jacotins, on the ground that lee was wealthy and a nobleman. Robespierre hated and feared the enthusiast; and when sit Just broucht his impeachment against Hebert and his adhorents, C. was involved in it, was condemned to eleath, and executed March 23, 1794. Me harit his sentence with the greatest composure, comforted the companions of his fate, and continued to preach materialism to his friend Hebert on the way to the place of exceution. At the foot of the seaffind he requested that his two might be list, in order that he might have time to establish a few more principles, while the heads of the others wore falling. He then daid his head with equanimity on the block, after asserting his innocence, and protesting ryainst his sentence, 'in the name of the human race.' Ile left in number of writings, all of the same extravagant character, of which we may mention here Certitude des Preures du Mohammedisme (Lond. 1750), E'Oratew du Gewe Inmuin (1791), ant Buse Constitutionnelle de la Repullique du Cienre Humain (1793).

CLOSE, in Herallyy. When the wings of a bird are down and close to the body, it is described as Close. The term is used only with reference to
 Of dunghill cocks, and other romestio fowle, it is understood that their wisks are in this pasition. Birnacles, and hits for horses, are sail to lo: cluse when they are not to be inderstuod as axtemidel.

CLO'SE-HAULED, in Seamanship, is the mote in which the sails ar" amranget, in urter to joble the ship move in a direction the nerest possilh townents that point of the cumplass from which the wint lows. Fore and aft wessels, teluecially cutter, wail closer to the wind than square-riget ones. Rhips of some sizes an! shapes con attrin this result better than others; bat it is a anality scarcely to be calculated beforehand.

CLO'SET, in Iferaldry, the landif of the bar (i.v.v.). CLOTAlRE F. and LL., king of the Frables. Sce Merovingians.

CLOTMLSMOTIS, a name commom to a number of specics of small moths of the genns Tinea, thu" larve 'r caterpillars oi which are extremely destructive to woullen fluthes, furs, studfed yuatrupeds and birds, \&a. Tiun destructor is one of the monst amming of these insect pests. It is of is satiny bufl colmur, the wings deflexed when at rest. The larva is abont a parater of an meld long, with mily at tew hairs, white, with a shate. cromed linn down the back, an ochemand boad, and 16 lege. 'I' mparame hats the upper wings bliek it the biase, the rest of the wing white. I'. surcitlla is anatior very common speajes, of a silky erty colon' ; the head, Chorax, and bises of the sum rim wings whitro; the wings followl flat on the levek when at rest. 'Fhe larra is eovered with seatered hairs. Thess: moths are most abmaliat in the wamere seasons of the year, lat thair larve carry on their destractive nreations even hurine wint r. Guided by instinct, the fomale moth has her ceng Where the larva may fint their whmate fome consisting of substances indirentiblo to ahmest wery othor creature; and the limva, lueing fumishal with minute lint stron's and shear] jows, nut only begin to eat as suon as they are hatchon, font to ent tho fibres of the sulstances on which they ford into little lits, and to unite thern by meins of a ydatinous silk of their own producine, su as tu form for themselves eases, linel iuternilly with silk; am in these they constantly alide, adding to them at the anterior end as their own increase of size requires, and also wideniar them, by slittine there dewn the middo, and mentius them with adlitional materials. All this may be bematifully observed hy transeminy the same moth-larya to difierent piseces of flanmel in succession, of different colours. The larva of 'Tomes torezomer works its way through worllon stulls in an arched gallery, carying its little case with it. \%. pellionella makes similar tunnels in furs. T. mrenella is destructive to books as well as to grain. No Corv-motht. The best means of pervinting the ravages of moths are perfect cleanliness, frepment inspection of articles, and their exposure to light and sir. Spirit of turpentine is nsed for lillm, them; the rapour arising from a sponge dipped an this liquid is fatal to such ins it sufficiently rathes; they are also billed lyy the heat of a brisk hire or of an oven.

CLOTHING, Army, is one of the departments of the British military system into which, within recent yoars, much change and improvenent have been introduced.

In the time of llemy VIII., the suluitss dress was principally white, with green or ansict for special corpis. In Queen Elizabeth's rejem, it amm of 1s. Sel. was allowed weekly for each soldictis cluthume. The miform then consisten of a casanct of hentish Iroad-cloth, a emuas immbet, kersey stockines, tronsers of kersey lirond-cloth, neat's loathur thuts,

 as $\mathcal{E 6}$, 10). St one time, lomb-litntmant attemh to the C. .f the troops, each in his anso wanty; but the duty was afturwards trameral to the state. Caranins uf ampanies otathert tho mana stopped the man $y$ out if tloe pras, and made :a

the leaves few, large, bohed, and som, what kidney shaped; the flowar large and white, make amb female flowers on sepparate plants, the fimade pant probucing ath orame-red front "gmal in siza 1 " a bramble-berry, and of an agreable flavour. It is a native of the northom parts of Europe, Asia, and America. In Britain, it is ehtoefly contimed to devated moors; in Norway and siweden, it is much more almulant, and the fruit is highly vahed and made into "xedlent presirves. Thenrtumately, the plant is of dilioult cultivation, and no attempt to make it pronducm froit frealy in our gardens has yet bern shecesshul. Sumewhat similar to the (') is Jilutus afomets, which yieds a viry agreeahlo iruit as large as a raspurry, one of the: few mation iruits of Tioma del Fuero and the Falkland lslands.

ChOU1)S are masses of for consisting of minut, partieles of water, often in a frozen state, Hostimy in the atmosphere. When wir saturated, or nearly so, with vapone, has its temprature loweren, cither by ascemling anll becoming raver, or lyy meeting a colder current. a purtion of the vapour loses its gaseons furm, and hecomes comdensed int., minute speck of water. Fee Eraroration, Dew, Rime, Svow-mine. A clomi, thercfure, does mat comsist of vapour, in the proper seuse of the warl, but of water in the form of dust. as it were. How this water-dust is suspemid in the atmospherewhy the particles do not discemd as som as formen, has never been satisfactorily explained. It has hem assmmen that the watery inaticles are hollow, like blown hubbles. But there is no prouf of this; nor Wonll the hollowness of the particles account for their flating, maless it comble bhewn that they must he filled with a gas lighter thim the surmondince air. Professor fif. Af. Stokes hohes that theny are prevented from falling mainly by flue friction and lray of the air-particles, just as time powters remain suspemted in liquids of much less specific gravity than themselves. But, as Sir .T. Herschel siys, rising and horizontal air-currents must also "phace the fall of C ; for at night, in the alsence of risinf currents, they "ftell lescemi to, amd dissoly" in lower and warmer levels. The conclitions under which $\therefore$ are formed, and afterwards domsited in rain, are more fully considered umber Brimomitur, Dra. Riss, SNow-line. The present article is romfinen to a description of the rarinns limeds of (\%. and tif the weather they indicate.

A general haze of precipitated rapour covering the skry and coming down to the earth, is termed a Fog ur $1 /$ ist ; and the term 'lom is nsmally comfincil to masses of forg floatine in the higher regions. and not descoming to the wrmmi. They are mustly within a mile of the carth's surface; and nomb aro more than tive or six milns ahme it. They rise hinher in the equatorial manes than towatis the pules. $\therefore$ spread and mive with the wind in variod, often gram forms; they are eremeally disposed in heds parallel to the earth's surface: wertical C, eceur rarely, if at all.

Cumblo-stratus, or twain-clomt, is a (in-st. mixed with Cu. heaps, or a wide that base smmounted by a bulliy chu, with Heecy protulerances or rocky aud mountain masses. It resemldos a thick-stemmed fungus, with a flat, anvil-shaperl, rip cirrose top. It is much denser than Cun., thongle the air is not dry enough to round off slarply its tops. It often forms vast banks of cloud, with overhanging masses. It is common towards night in lly winly weather, when it has a leaden lue. It generally arises from Cu. lecoming denser, wider, and protruding in large irregular projections wrer the base. It tends to overspread the sky, and partly or wholly to become Ni., and fall in showers (no-st. is intermedate between clonds indicating fair, and those indicating rough, sainy weather, and atteuds sudden atmospheric changes. Distinct Cur-st. forms hefore thunder. Cu.-st. increases the graudeur of mountain scenery, and drops on and cavelops mountain-tops like a curtan.

Yimbue, or Cumnlo-cirro-stratus the black raincloud, is a chond or mixed system of clouds, ending in showers of rain, suww, or lail. It is a dense, contmuous, horizontal hlack or gray sheet, with fringed elges, a cap of Cil, and Ch. on the sides and below. Defore rain, vast towering masses of Cu. oiten pass into Cu.-st.0 which, increasing in density, darkness, irrecularity, and extent, lrecome Ni. capped by (i.-st. Tlunder-storms are always accompanied by Ni, in its most perfect form.

The term seut has leen apphed to loose vapoury fragments of C. driven by wiml, and cumuloms to shagey cumuli.

The formation and letight of $C$. vary with the "quatity of vamur in the air, the enurse and height of ar-currents, the climate, senson, temperature, dispositim, and extent of sea and land, and the height of land. Clmed-strata on the Pyrences vary in average thickness from 1600 to $: 3010$ fert. The lonter swifaers of considerable masses of clouds in all dimates are probally 9500 to 3000 feet above the earth. Remarkalide clowd-rings prevail owe the calm eones of the eqmator, and over those of Cancer an\} Chapriem. Clomls, viewed from abuve in brind sunshise by the atromat or momtainecr, appear as lense volunes of steam or masses of white cotum. Kamtz regands the uswal height

CLOVE BARE, another mame for Cubilaway Balek ( q . v.).-Another latrk which aecurs in come merce under the name of $1:$ B. is that of tha Myptus caryophylluta, a mative of Ceylon and the Mascarche lsles. It is in sticks two fect lonse. formed of several pieees of wery thim and hard lark, rolled ap one uver the other, of a deep bwow colener, and of it taste similar to that of cloves. It possesses properties analogous to those of cimanom.

CLO'VER, or TR'EFOLL (Trifolium), a genus of plants of the natural order Leguminosa, sub-order Popilionacer, contaiuing a great number of specins, natives chictly of temperate climates, almonding most of all in Eurone, and some of them very inumortant in agriculture as afforling pasturage and fodere for cattle. The name C . is implued popularly extended to many plants not included in this gremus, but belonging to the same natural orier, and agrecing with it in having the leaves formed of three leatlets, particularly to those of them which are cultivated for the same purposes, and sometines collectively receive from farmers the very ineorrect designation of artificiol frasses, in contradistinction to nutural grasses, i. e., true grasses. See MEnck and Melilot. The tine clovers (Trifolinm) have herbaceons, not twining stems; roundish heads or oblong spikes of small Howers; the corolla remaming in a withered state till the ripening of the sced; the pod enclosed in the calyx; and containing one or two, rarely three or four seeds. Ahout 17 species belong to the flora of Britain.The most important of all to the British former is the Common Ied C. (T. mutense), a native

Lied Clover (Trifolium pratense).
of Britain and of most parts of Europe, growing in bucalows and pastures. It is a percmind, lint is wemerally treatel as if it were a hieminal. Its beants of thowers are oval or nearly globular, very compact. ahont an inch in diameter, jurnde nure rarely Hesh-eoloured or white; the tube of the calyx is downy; the stipules run suddenty into a loristly point. The leaflets have very often a whitish lurseshoe mark in the centre. This plant was fommerly reputed very noisome to witches;
limights amb fanants wore the 1 aid as a proment Aharm agrainst their arts. It is sumpered that $\mathbb{C}$. fonal ita way into liugland from the Nellowlands

White Clover (Trifolium repens): $a$, head of flowers when the porls are rypang.
is also a common native of Britain and of most parts of Furepe. When a barren heath is tumed up with the spade or plough, White C. almast always appears. It is sail to be a mative also of Sonth America, where, however, it is prhaps only naturalisel. The dowers of all kinds of ". are the delight of hees, but thense of this slewies perhaps particularly so.-Alise C. (T, hymulum), a peremial, regarded as intermentinte in apparance between the Common Jied C : and the White C .. has of late attaned a yory hiuh reputation. It was introduced into Britain from the south of Swelm rather more than twenty years ago.-C'rimsos U. or Itmons ( $:$ (\% incumotume), ath ammal, native of the sonth of Firope. with whlong or eylindrieal spikes of rich crimson flowers, is meln enltivated in France anl Ttaly, anit has of late been protty extonsively grown in sume parts of Enctand. 1 row
 vay much resanhes Crimson C., but is biemial. and has pale Howers. It is cultivated in France antswitzarlanl.-Alframpanin Co, or Egrptas (". (7. Alormbrinmon, an annual species, a native of Eeypt, universally cultivated in its native cmantry, whire it is the principal fodder for cattle, has been trica in Britain. lat the colder climate has heon found to remer it less huxuriant and prodnctive. It is supposed to be oue of the best kinds of $C$. for
many of the British colomies. It has oval heals of pale-yellow ar whitish tlowers.- Yellow C., or Hor Teefoils (T. prormbens), is very common in dry gravelly soils in Lritain, lant not much esteemerl. It has smaller luaves and hewls of tlowers than any of the cultivated species. Its flowers are yellow.

It is little more than a century since clovers were introducal into field-culture in Pritain. They are now universally cultivated on large farms in alternation with train crops. The kinds must gencrally sown are the Common lich. Cou-apass, Dutch HThte, Fellom, and Alsike. The 'ommon lent is the finest ane most valualde, lint it is thitlicult to grow mandess on maturally rich soils. In America it grows well on sandy loams thangh sown ereay alternate year on the same lanl. But in Pritann the land is thought to beeone 'cluser-sick' when sown too frequeutly with this crop. An interval of ment less than eight years is thought alvisalne. From 6 to O0 liss. of seed per acre is the puantity som. Lial $C$ is most esteemed for beine mixel with rye-mass for the making of hay. When it grows well, it hears to be chat more than once in a year. Conwrass much resembles the common Iied Clover. It is coarser lat hardior, and better suited for mastme, as it bears more herbage, and cones lotter up after being eaten close down by stock. Thuth White $C$. is only estecmed for pasture ; it grows short and thick on the gronnd. lant throws ont fresh stems and flowers during the most of the growine season. In the south of England, it is sometimes sown with lout little rye-grass sced along with it; in Scotlam, as much as a bushel or a bushel and a half of rye-grass is mixed with it for pasture. IFlluen C. is chintly sown on eromul where neither the white nur red grows fredy. It is not sown so frecuently as it probly ought to he, fom it rises early in spring. and a mixture of it with other clovers forms gion pasture on all gromuls. Alwike $C$ has been recently intronluced ; it rises much higher than White C., aur uffirs to he a useful adhition to our pasture-plants. Lanl mast be thoroughly cleaned of premial weeds before it is sown with C.., as the land caunot be subjected to cultivation while it is under this prant: C., therefore. is always sown in the end of the rutation, or as near the fallow or twinip, crop as pussible. It is somm only in spring among the winter-wheat, or with the harley crop, and slightly harrowed in; for the sends leeing small are not lificult to hury. Farmyard manure is as cood as any for clobers. A wellmanured suil greatly assista in leerning the pants from dyingent in sprimg. Clovers, like grassus, play a most important part in rustoming fertility to lamil which has leen "xhansted hy grain-erens. Their leaws gather fomb-carbonie acill and ammoniafrom the atmoshere, which they stome ul in their ronts and stims: and these, on decompusims. alford fond for ecreals or other arris which are more Wepment an a sumply within the soil.

long. A. flavipes is attached in like manner to white clover, and wher suecies of clover have their marticular weevils.

CLOYES (Fr. clon, a nail) are the flowerdonds of the Clove-tree (rempmpmelus aromations). The gemus to which this tree lelongs is of the naturat orter Myptuce ; the calyx has a cylindrical tube and 4 -cleft horder: the cordla consists of four petals united by their tips; the stamens are in four clusters; and the fruit is an oblonif dry berry with one or two cells and as many seeds. The clove-tree is from 15 to 40 feet high, with a leantiful pyramidal head. The leaves are large, ovate-oblong. acummated at aach enil, evergreen: the flowers are sinall, but produced in geat profusion in cymus. Leaves, tlowers, and bark have an armatic orlour. The ripe fruit in shane resembles an olive, but is not yuite so large ; it is of a darkred colour: it sumetimes appears in commerce in a dried state, muler the curions name of Mother Clures: it has an orlour anil havour similar to C., hut mach weaker: the broken fruit-stalks aro

The Wild Clove-tree of the West Imdies is Myjucit acris. See Myrela.

The properties of $C$ depend chictly on an essential oil, oil of $C$. which forms rumelith or one-sixth of their whole weight. They aro used for thavouring dessert dishes and articles of confectionary. They have a hot taste and a characteristic odour. The oil of C . is olatainem by repeatedly distilling $C$. with water, when two oils pass wer, one of which is lighter, and the other is heavier than water. The oil has a hot acrid taste, is of a light yellow when phew, and brown red when not so carcfully prepared. It has a well-known olour. and is siblable in ether, aleohol, and the tixed oils. It is useful in medieme to check nausea and griping, caused by the adminis. tration of purgatives. It is also employed in the scenting of soap, and ly the listiller. Tinture of $\because$ is ontained by treating C. with alcohol for several days, and then strainings or by a solution of the oil of $('$. in spirits of wine. It is anderd, in medicine. to stomachic, tonic, and purgative mixtures.

Clovis (okt Ber. Chloducig. i. en. 'famons warrins :' modern Ger. Lutmig. Fr. Louis), king of the Franks. was bom 465 A. D., and ber tha death of his father. Childeric, became king of the salian Framks, whose eapital was Thmonay. His dirst achicrement was the owrthrow of the Gallo-Fomms under syagrins, near hoissons He then took possession of the whole comery hetwem the Somme and the loire, and estahtished himsolf in Soissons. In $4!3 ;$ he married Clotilia, danghter of a Burgumian prince. Ilis wite was a Christian, and carnestly desired the conversion of her husbanl, who, like most of the Franks. was still a heathen. In a great lattle with the Alemami, at Tolbiac, near Cologne, $C$ was hari pressen, and as a last restorce, invoned the fom of Clotilda, offring to become a Christian, on condition of ohtaining the rietory. The Alcmami were routed, and on Christmas bay of the same year, C. and seveml thonsands of $h$ is amy wore christened by Remigits, Bishop of Rhemes. Must of the Westem Claristion princes were Arians, hut C. was strictly orthodox, and, in consequener was saluted by Prope Anastasius as the "Most "hristian King. In 50 , love of conguest eonzuring with zeal for the orthondux faith. C'. marehen to the sonthwest of (ianl against the heretic Visigath. Alarie II. whom he defeated and slew at Vongle, near Poitiers, taking possession of the whole country as fiar as Iorrkuux and Tonlonse; lut was checker ai Arles, in 507. by Theotoric, king of the Ostroneths. Jlence miginated the I'nitell sorvice ! $\therefore$ and the surcess of this speedily loul to the fommine of whers fios different elasses "f suciety, and fin $]$ nemas of infferent political phans. It the present thane there are abent in such clubs in the netrenslis, of which the following may lee rankel as the prineipal: Army

 Lieform, Travellers', Cminn, Inited Surico, Thitel Cniversity, Whates, and Wimihams. All there and some of the others, combine the form syatom with the duh systim. Eidinlnurgh has three clules the Niw, the Cmited serviee, and the Northra;

Glasgow has one, the Western; and there is also one subl estaldishment at Aherdeen.

Each Irineipal $\therefore$ comprises a certain definite number if members: it may be, for instance, 500 . 1001), or 15m, and this number cannot le execeded withont a fimmal change in the rules. In some cluhs, the managing conmittee are emporsered to admit distmushed persons to membership; but the seneral mole of ahnission is ly hallot, each member havior a vote. In some ehib, one single hack lall or 'No' suffices to exchude a caddidate; lant. generally, the rules are met so stringent. The mombers jay a sum of money in entrance, and then an annual subscription-the amounts rarying much in different elulis. The entrancemoney may he required as capital, to assist in building the club-house, $\delta e$. ; while the anmuad suhscripitions, after laying ewrent expenses, leave a surplus for future contingencies. The more important clubs comprise morning of news rooms, thraries, coffee-moms, thing-rooms, drawing-roms, and a very complete eulinary estallishment. There are no arrangements for the members to sleep at the elub-homses; exeent at certain estalishments called chab-chambers, which, however, are nert properly eluhs. Some of the cinbs are furnished with hath-rooms, card-rooms, lilhard-rooms, and snoking-rooms. The restaurant department is usually very complete; everything is of the lust, aml is surpilied to the members as nearly as can he at jrime cost. In nearly all the clubs, haridrinking is diseouraced. It has heen ascertained at two or three of them, that the average enst of dinners is abont half-a-crown, and that the wine searcely exceens half a pint to each diner.

It may hare frictly be mentioned, that some of the club-hurses rank amons the most degant modern buildings in Lomelna. The Corlton, the Reform, the Conservative, and the Amy and Navy elubhonses are especially to be named in this respect.

Before the first Rerolution, it was attempted to get up witical cluhs in Paris on the Enclish plan, Lut they were prohibital by the police. With the meeting of tho National Assembly, and the outhreak of the lievolution, political socicties, about $178 ?$, spranr into unsonted activity. These associations mustly assumed the baglish mame-such as the Club, des Fewillans and the Jacolin Chab; but they hat quite a different character: they were fopular societies. In them were concentrited the great politied parties of the natiom, hy mpans of systematic or ranisation and affiliation. The Furohin ('hat thus came in the cult to embrace all Fluncos, and to rule it. Siwilar associations sprane up in (inmany, It ly, Srain, and wherever the Revolution tomk any rout. In fremony, these unions ware prohinited in

the injury done by the lenife is necessarily great, this pion succeeds very well. Dressings of quick. lime, wool-ashes, de., have boen recommended, and appear to have proved partially suecessful in preventing this exil, prolably by de:cring the parent insect from anmonchime to lay her ears; lont change of erop. when practicable, is of all things the most commendable. C. is sometimes confounded with Ambury ( q . r.), from which it is quite distinct.
CLU'B-FOOT (Lat. tetipes) is a distortion or twisting of the foot lyy one or more of its muscles being fermanently wortened. It may exist from linth, or aceur in carly childhood after convulsive

A, Talipes Varus; B, Talipes Equinus.
fits. Surgeons recognise four varieties of C.: tumn ing inwards (carus), ontwards (ralgus), downwards with eleration of the heel (equinus), or upwards with depression of the heel (calcomers).

As age advances, the bones alter in form from the pressure exerted upon them, the haments shorten, and the foot becomes rigidly moulded in its unnatwai position. It cripples the person's morements, and in many instances bas proved a great aftliction. Lord Byron's whole life seems to have been embittered by one of his feet heing inverted.

Although Lorenz, in 1784, ent the tendo Achillis to lower the heel in talipes equinus, yet, owing chiefly to the dangers of entting across tendons, C . was practically incurable till 1831, when Dr Little of Lom ton, haviug himself a C., after secking relief from many surgems at home and abroad, found his way to Dr Stromever, at Erlangen. This ingenious surgeon introluced a narrow-haled linife, and divided the tendons of the contracted museles with such a small external wombt that searecly any intlammation resulted. Jor Little heing cured, published a treatise on the sulject, and at the present day 10 defmonity of the foot is considered irseme. lialle. Jowever, it must lie remembered that the hivision of temetros must be followed by judicions manipulations, and momeally by the application of sume suitalde apraratus to prevent the foot returning to its former pesition. Of such apparatns, Scarpa's Whes as it is thrmed, maty be mentioned as the ono

2 miles above to 4 miles below Lanark occur the eclebraterl Fails if the C , a series of cascades and rajnds, the largest in scotland for quantity of wator-the tutal descent, in the erourse of six miles. lewg ent feet wer old red sandstone rocks, amil wery pieturesqu" sconery. Two of the Falls are alure, and two helow Lamark. Bomiton Limn, two niles alwve Lanark, is a cascate of $: 30$ fret, with sume parts ouly 4 feet lowal. Corra Linn, lalf a mule bulw the last, is the grandest foll, forming three distinct leaps-in all, 84 feet high. Humiaf Fall is 10 feet high. Stonebyres Linn, two miles below Corra Linn, froms three distinct falls-in all 70 fect. Below Glasgow, the $C$. expants into an estuary, mavigalle ly the largest vessels, and at Greeurek it attains a hreath of alout 4 miles. Opposite this peint it commmicates with the Garelreh, and a little below, with Lech Lang on the north. Its conrse, which from diasgow has hen west-northwest, now turns suldenly south, in which direction, inclining a little to the west, it continues to flow between Argyle and Bute, amil Cantire on the west, and lenfrew amil Ayr shires on the cast, antil it becomes intentifich with the North Channel at Ailsa Craig, where its brealth is about :\% miles. The ( 6 from its source to (ilassow is, by its wimlings, 7. miles long, and from Glasgow to the sonth eni of Cantire, 45 miles. lis basin ocenpies 1500 square miles, and consists of earhoniferons strata and trap rocks, the latter chiefly forming the horderiner montains. Floods sometimes raise its waters 20 feet, and it has changerl its course at Renfrew, which was once elose to it. Clyylesdale, or the valley of the $\mathcal{C}^{\prime}$., is noted fror its coal and irom mines, orcharis, ami horses. Bell, in 1812, lamehed on the C. the first boat in Europe successfully propelled by steam.

## CLyDE, Lond. Sue Cavprehl, Sir Colin.

CLY'STER (Gr., from lityo, I wash ont), callel also comem, a menticine atministered in the lipuid form ly the rectum, or lower end of the intestine. It is usel cither for the furpose of procuring evanation of the bowels, or of convering stimulating or nourishing sulstaners into the system. For the latter parpose, wine am heef-toa, or milh, in quautities of a few ominces at a time, are employd ; for the former, simple wam on coll water in sudiciently large quantity to distemt the bowels, aud produce
evacuation ; or in special cases, varions eatharties may be nsed in adlition, such as colocynths, aloes, castor oil, or turpentine made into an emnlsion with yrolk of eyre and sometimes carminatives, to exjel air. Narcutic clysters are alsu employed, but should muly be used muter medical superintendence. An injecting syringe, with a flexible tube, and a double-action valve, is usually embloyed for the administration of this remedy.

CLYTEMNESTRA, in Homeric lesenl, the daughter of king Tyndarens and of Lerla, and the twin-sister if Helema, became the wife of Agamemon, and lwore him a son, Urestes, and two dauchters. Iphigenia and Electra, During the absence of Agrmemmon on his expedition to Troy, she formed a commection with Aigisthns, murderel her husband on lis return, and reigned for seven years with Fgisthas, till she was murlered by her own som, "restes.

ONIDUS. or GXHOS, a city on the promontory of Tripminn (now (ape Krio), in Caria, in Asia Ninor, a Laceltomman colony, and one of the six cities of the lonie leagne. $\quad$. (accorting to Strabo) land two purts, whe of which could be closen? In front of what was the tonw, lies a lofty island, alout Gow yaris lomq. which was connected with the manland by a catseway (now a satuly isthmas). The sonthem port was formed by two moles. carried into the sea to the dppth of nearly 100 feet one of which is nearly periect at the present lay. The city was famons for several temples of Venus, who was therefore sometimes ealled the Cindian goldess. One of these temples containel the famous statue of the uaked Venus ly Praxiteles. It was of Parian marble, and so leantiful, that Nicmutales, king of Eithymia, offered, in return for this master-pince of Grecian selupture, to pay the entire debt of the city, which was very large. The (midians, in the excess of thoir devotion to art. refused. [uring the wars in ancient times, (! was often mercilessly phumered. The site of the city is 'covered with ruins.'
COAC'I is a general name for a velnicle drawn by lamses. desiged fin the conveyance of passengers, as distimgished from a wagh or eart, for the conveyance of ghols. Cublue or enclosel earmages, drawn on wheds, and intender for ${ }^{\text {nassengers, were }}$ inventions which have been clamed by Himgary,

closed only to this extent-that they hal wanmies supported ly ornanental pillans, and chrtans of cloth, silk, or leather, which embll her shawn casily asille. A glase C., or $(\therefore$ with mass windows, is spectally mentimed as lewner bsed loy an lufianta of Spain in l6:31. The traces of the combers were at first made of rope: thase only beronerine to the lighest persemagts were made of leather. It is believed to lave lwen in the time of douis NiV. that emaches were lirst susimblembleathern straln. in orlare to insure case of hotion.

The first 14 pere sern in Enestimd is said to have been one male in lans by Walter limpm fom the Wan of lintind; ame in $10 \%$, the same haider make a shewy vehiche for Queen Elizaberth. Jouter in the rejn, He myal carriages hat sliding panels, so that the deren could shew herself to later lowing suljects whenever she desired. During the clasing years of Elizabeth's reign, and carly in the 17 the $c$, the use of pleasure-carriages extendel rapidy in dingliml. The coaches hail first to strugule against the oprosition of tho boatmen on the rivers, and then against that of the sedan awners and hearers: but they gradually came into vory general use. The suecessive steps whereby the coaches of those days Gave way to the elegant vhicles of the prescnt, need not be traced in detail, even if there were the means to do so.

The following are some of the chief kints of Iheasure-carriages. The Denme is a two-wherled velicle for me horse, with a jointed how or head covered with leather, and a driving box. The Stemhope bears some resemblance to the domet. The tillury is in like manmer a two-wheded vehicle for one horse; but it bas piable leathem lraces loctween the sjrings and the lody of the whicle, torather with suspension bracket.s. The Cubriote belongs to the same class as the tibury. The name ('ub is an abreviation of calriolet. but it has come to be applied to a four-whelal vehicle. The Curbich is a two-wheden vohicle for two horses; there are no shafts: but a pole, fixed to a frame which supurnts the boly, passus between the harses, and is suspembed from a metal har resting on their backs. The Phecton is a four-wherded whicle which may le drawn either hy one or two horses: its front looly is somethins like that of a rlennet or stamope, and hohint this is an open scat, sulported on a kimp of large box. The Couch is a closed fur-wheeled velicle for two or more horses, with two seats inside, and a skilfully constructed arrangement of springs to insure ease of motion. The cheriot, or chaise of mondern days, usually hiffers from the 6 . in having only one seat. The Landru is a C. made to open occasionally. The Burouche is fermanently open, with only a leathern hood or head over it. The Britesehke is a kind of small baronche. In aldition to these, our are lias witnessed the manufacture of the Brouphum, a miniature coach usually for two lemans, lint in which four may lee accommolated : and the Clavence, a pair-horse carrage with movable glazed pancls and hool, and for two or more persons.

The manufacture of carriages, whether pleasurevehicles or nmibuses, rauks in the lighest class of mechanical labur. There is a necessity for the hest materials and the best werkmanship: since, owing to the severe strains aud jerks to which the vehicles are subject, chear, construction is in the end umpotitalle. Many different kinels of wond are employed in the construction. The baly of the $\mathrm{C}^{-}$. is made by one set of workmen. the under-franing by another; the former jartaking more than the latter of the mature of cabmet-work. The steelspring making is delicate work, owing to the necessity for combining strength with lightuess and
clastisity : :n the varions pieces of irm-wonk

linglish carringes are considered toln the best in the world; mone else combine so moth stmoth with an ingal degree of bauty. The artisans "mphyenl in this trank, especially equm-hendy makns anf coach sping makers, conmand a very high rate of wages.

COAD.JU'TOR (Lat.), a fellow worker mot as principal lut as seemul, an assistant. 'Jechmically, it is aplied in ecelesiastical law torne apmintod to assist a hishop, whom age on infirmity has disablent. by ie Geo. Ill e. 62, coaljutors to lishons amd archbishons in Mreland are enpowered to warcise all the powrs of their principals execpet that of presenting to benctices. See Execumis.

COAGULA'TION, the anompous (q, r.) smiditication of a liquid, or part of a liequid, ats when the caseine of milk is solidified he remet in makines Cheese (q. v.), or the white of an enf ly tuilans. The process varies in various substances. Alluman, or the white of an egg, coagulates at a temperature of $160^{\circ}$. Nilk is coagulated or curallel by the action of rennet or by achls. The tibrin in the hberd, whyle, ann lymili of animals is conculated by the separation of these thuds from the living borly. Seo Bloore.

COAllUl'LA, a state of the Dleximen Conforma tim, is sepmated from Texas. in the United Nates, by the lío Brawe del Nortr, in lat. "1-3 - $3 H^{\circ}$. aned ling. $100^{\circ}-103^{\circ} \mathrm{E}$. It cuntains :30, 240 siquate miles, and almut 80,000 inhalitants. liesiles at capital of its own name, with a plpulation of about 4000 , it has the towns of Saltillo aml Sinta Liusa. It possesses some silver-mines; hut it is valuable chiefly for its pastura.ge.

## Codita, se Ateles.

COAL, in the sense of a prece of ghowing fuct (and henee a prece of fied, whether deal or alive) is a worl common to all the languages of the Conthic stork (Icel. Kol, (xer. Kohlo), anif sems allied to tho Lat. releo, to be hot; as also to efone. and kiln. The different sonts of fool are distinguished by purdixes, as churcoal, put-coal, sec-coal; boit in Enchaml, owing to the absorbing innowtance of minemi on pit-enal, the worl 6 alone bas come to be usal in this spectal signification (Ger. stembolten, Fr. chabban de terre).
C C is one of the most important of all mincrals ; it emsists chiefly of carbon, and is nowersally: regarded as of vecetable mixin. Its wedogical relations are moticel in the article Coneosiffruts Shamem. It generally mecurs in strata ar leds; it is ilways uf a hack ir hacki=h-lrown mbur; some of the varietios have at very comsinerahle degree of vitroms or resinoms lustre and some are very lestitute uf lustre: some have a shell-like fracture, and some have a sort of slaty structure, and are readily broken into eulyical or rhomlwidal framments. The precise characters of $\cup$. as a mineral species are not easily definen, and both in liritain and other countrips importint cases have occupied courts of law in which this
diffeulty was stronely felt, as in the great Scottish lawsnit concerning the Tordanhill Mineral (a.v.). The uame ( $\because$ is indeed varimaly used even by mineralogists, sunctimes in su wide a sense. that Anthracite (4. W) (Lliand C. or Gluece C., Culm) anti Bromz ('. (I. v.) with det (1. v.) and all the wher forms of Lingite (.I. v.), are included in it: and sometimers in a sense much mare restricted, in whick Siute C. (C'thin! C', Chervy Cor Noft C.
 varioties. Cumed $\therefore$ allan called Compuet $r$ ', and,
 that it takes a somi prolish, and is umde into vases, hozes, ink-stands, and other articles, like jet: but its chief value is for making gas, which it yiells in very lurge quantity. It hums with a bright tame. Slute 6 is the nure common kind, lut in which there are ureat differences, as every reader is aware, in the denrees of enmpactness or of frangilality, now in many utber particmars inpurtant to the consumer. Iopularly the name $C$ is siven to the zmineral sulntances nsed as finel, whe ther mineralorists may teru them $\therefore_{. .}$, Jignite, or anthracite. Anthracite is not hatuninons: the other linds are sometimes collectively lissinnated Filluminoms Coal.

The use of C. Nows not seem to have been kinwn to the ancients; nom is it well known at what time it lugun to lie usel fur frul. Some say that it was nsed loy the anctent Prituns. There seems to be pasen for thinking that England was the first Europian country in which $\therefore$ was used to any comsielemallo extent. Alout the end of the lath e. it hegin tu be emphayed in Lomdon, but at first only in the arts ans manufactures; and the movation Was complained of as injurions to human health. In 1316, the parliament petitioned the king, Edward IT., tor panilit the use of C', and a proclamation was accortinuly issuel againet it; lint owing to the hish ]rice of wort, its use soon beeame general in Londan. It was for a lons tine known the ere as

C. is of incstimalde value to man, unt only as a fuel for domestic use, but for the reduction of metals and fur all the purposes of the arts. inchuting the generation of steam-finser, on which so much bur depends. Mritain is indelited for much of her greatnees to the ahmdance of C... along with limestome and irm om, in lare districts of the island. The most extensive amd impurtant ! Siffelds or maljwmbinis districts of Britain are in the north of Fneland, in the comaties of Northmberlamh, Dur Lam, C'muly Hand, Tork, 1 ancaster, Derly, Staflare, and Nottingham: in North Wales and houth Wales; and in the central lowland tract of heotland, in the fusins and near the Firths of the Forth and the (17y). Pactl of the provinces of Ircland has its (1. Natrint, the last important beine that of Cleter.

 worlt at those of Nom Ammica, veculying grat
part of the river-basins of the Unitel States, and also of New Brunswick, Nova Scotia, and Cape Breton.

From the reports on the Paris Universal Exhilition (185), fresented to the British marliament, it appears that the United Kingdom produces about (as million tons of coal annually, of which quantity $47 \frac{1}{3}$ millions were raised in England, nearly 10 millines in Wales, and about $T_{5}^{\frac{1}{2}}$ millions in Seotland, Ireland only sielding about $1=0,000$ tons. The rest
 States, 5 millions: the whole word, gi millions. [A recent layal commission (l57) rejurts the probahle quantity of conl in the ascertained coal-fields of the United Kingdom as 10 : 207 million tons; coal Mrobubly existing at workable depoths unfer the l'ermian ant ather strata, $56.2 \pi: 3$; making an argegrate of 146.450 million tons. This wouk support wir present eonsumption ( 115 millions annually) for 123 years.]
C. may be recrardel as fossil wood which, cluring its lone interment in the erust of the carth, has undergme certain chemical changes which alter in part the moportion of its ingredients. The transformation of vegetable remains into $\mathbf{C}$. is proeeeding on a greater or less scale in many parts of the world at the present moment. As wondy-fibre is the princinal constituent of plants which thus nudergoes change, it will only lie necessary to refer specially to it. The constitnents of woody-fibre are earbon, hydrogen, and oxygen, with minute quantities of ash and nitrogen, and occasionally sulphur, and the relative froportion of the prin. cipal clenents wity be recognised from the formula $\mathrm{C}_{12} \mathrm{H}_{0} \mathrm{O}_{0}$. The mean percentage composition of wood, as contrasted with an average specimen of C., is given in the following table:

It will be olserved, therefore, that, in a chemical seuse, C. differs from wood in containing a mueh larger percentage of carbon, less hydrogen, and a very mueh smaller projortion of oxygen; in other words, during the process of the deealy of wood, the hydrogen and "xygen tend to disappear more quiekly than the earlon, and thus a corresponding excess of carlon is left in the fossil wood. The mode in wheh these changes oecur may be explained in several ways. Thus, carbonic acill $\left(\mathrm{CO}_{2}\right)$ is a constant pro duct of the decay of vegetable matter. and in many instances carharetted hydrogen ( ' 11.2 ) is evolvel, as anserved "ven in the working of $C$ wines, where this sas, unter the name of tiredamp, escapes into the working. The hydrugen nay be also removed by unitiog with "xygen, and forming water. On the decay of vesctalike matter lying on the surface of the gromma, and fully "xpased to the action of the axyan of the aire tha finall result of decomposition whild to the ponduetion of ouly a minute amount of black momle; hat where the regetable matter las lawn sumarged wader water, and especilly if cowed wer hy same or other row-matter, thu fremen of attinate doway is roturded and maditiod sematly. from the seanty suplly of atmosplatie air, and the fromert in ceal.
 Whe $t$ form of conal, and is the havanst and most dens. It wnurally containaupards of 90 jer cent. of amma. Anthrivit lmons with diflicully, except
 Acoorlingly, it is ussul in malting uprations.

Shte come are the most ahmiant class. Caking "., fumd primeipally in the Newoathe and Wigan C.diches, when praced in the fire, splits up iato
small pieces, which quickly yirld lituminons matter sufficient to agglomerate the framents together agrin, and the whole becomes eaknd into a soft busty mass. At this starn, the combustion is very slow, owing to the dibiculty of the oxymm of the air gaming mbnittanco tos sil siles of the fragments of comb, amd if great hoit is reanimel, it is hecessary to break uy the fosel mas mow inm arain. Fur this reason, Caking ('. Ans mot :ntswer well where great furnate-leat is rexpiren, while it is the most
 The Coke (q. v.) whicle this varicty of ( - y. yelle, however, is of very great value as it hatinis arent in the fireplaces of locomotives and other furnaces. Splint C... or Mard C.., wcems laredy in the Lamarkshime earl-lields. When struck with a hanmer, it Jreaks up into imegular skaty splinters. It is not easily set fire to, but when thommolyy inflamed, it hurns peadily, and evolves much lieit.
 the dire, and is very sutt and friable, which romiers it wasteful in the workiner. It is not at all ecomomical in the consumption, owing to the rapidity of its combustion. It is very uni.kly set tire to, aml evolves heat rapidy whilst it lasts. It is found abountantly in Lanarkshire. Stiflomehire, and Lancashire. C'annel or Parrot C., pommonly called Crus (\%., hiss of late years been laredy userl in the mannfiucture of parathoe oils for foming bu lamps and Inhricating machinery. See I'aparfine $0_{\text {II. }}$ The following table gives the mean comprosition of coal derived from different localities:

| Lecallty | spectic Granty | Carbun. | Ilydrogen. | Osyeco, Sulj har. | Ash |

| Neweastle, average of 16 samples, | 1-256 | $82 \cdot 12$ | 531 | 0.98 | 37 |
| Lancashire, average of 28 samples, | 1:273 | 79 | 5.32 | 12.27 | 4.88 |
| $\left.\begin{array}{cc} \text { Wales, average of } \\ 36 \text { samples, } \end{array}\right\}$ | 1315 | $43 \cdot 88$ | 479 | C* | 4.91 |

When C. is smbjected to the action of heat in open fireplaces, the oxygen of the air temts to unite with the prineiphl constituents, carlon and hydrogen, forming with the carlon the gaseous sub. stance carbonic acid ( $\mathrm{CO}_{2}$ ), and with the hyuroren, a botion of water-vopour on steam (HO), and the result of this chemical union is the evolution of heat. The nitrogen of the ( $C$. escapes as gascous ammonia $\left(\mathrm{NH}_{3}\right)$, the sulphue as silphurous acid (SO) , whilst the ash is left in the fireplace. Heated at or helow a low-red leat in chose retorts or ressels, C. yields more or less oin, accompranied by tar and a little gas and water-vapour; but when phacel in retorts at a full or cherry rad heat, the mineipal product is rews, accompanied ly tar and water-vapor, luhlins ammuniacal compounds in solution. Sue tias, I'ininfine Oil, \&e.

Coul-foule.-The pounction ann sate of canl, like crery other ingertant lnauch of inntustry, was lone fettered with legislative remalations. At a vory carly perion, the corpuration of the city of Lumbin matertook the duty of either weishime or measming the C. bronglat into the lunt, and by_a series of statutes, commencing with 7 lil. VI. . 7. the natror and aklermen of Lomion, and the justices of the comatios, were marowerel to fix the pice oi $U$. to be sulal hy reval: and in case of refuad hey the parties to sell at the prines dixad, to enter their wharves, $w^{\circ}$ other plares ut repmit, and to canse it tor lex suld at the prices which they hal set. In addation to the general sumervisum which they thas possesech, and the smas whicla they wers enpowered to cxact for their trouble, the corporations of London and other towns have exanted, aml still cmatinne to exact, dues on C. for lucal purposes. These were
first imposed in 1 andom in $164 \%$, after the ereat firn, in order te enable the compration to repair tla ravages which it haml committen; and they have ben since contimult its a fumd for civic improve. monts, though, as Ne N" nallowh thas remarked, no improvemont conkl be "atual to arelow tom in the price of mal. In tise reign of William lll., a cracoal tax, payalile to frommment, was lain on all serb-homer merl-a tox which was in the highest duree majust to places which wore dopendent for their sunfly wh the enasting-trate, and rpmessive tor the whole rematry, inasmach its it mammotel to
 wwors at the pit"s month. 'The tax varial in amomat, nut only at lifferent perions, realhing its hishest point wi 3 . $4 /$. pre chaldran dumine the great war, hat alses in Riforent [rats of the conntry, Teiner highor in Lomelon and the sonth of Crmanid, and lower in lrolind and Wales, whilst santland for a consideratule period was altorether exompt. The tax itsclf, with all its inegualities, whan alwlishml in 1830 , and there is now wo tax on C. cxerpt that rollecter for local purposes in london and a few other towns. The repeal, in 1545, of the duty on C. expurtel to foreism combtries, wiss a measure of mach morce dombtiul policy.
Fur the provisons of the recent statute for the regulation and inspection of mimes (as and $\because \pm$ Viret. c. 151), see Mmas. The circumstances in which coal-mines are regarded ats a pertinent of land, and thase in which they form a semarate cstate, will be stated muler Mives and Miver.d.s.

1757, coalesced with the Whig aristocracy represented ly the l buke of Newcastle. The ministry always puken of, however, as the Great (C. was formed in 17 s. when Fux, the leader of the leformers, tomk office along with Lome North. the leader of the mpusite party. When Lord Derbys ministry resigued in Is.n, there was a shont 1 : betweon the Whig parts, maner lond John linssell. and the more moilerate of the conservative party, under Lord Alerdeen.

COAL-TAR. Se Ges-The.
CU'AL-WHIPPING, the name given to a mole of unloading coal from vessels at anchor in the Thames. Ahont $1.400,600$ toms of coal are amatally transferred from vessels in the river to laesees, which conver them to the wharves. The opreration is called 6 , and the men. cont-uhinens-mames, the origin of which does nut seem to he known. The men work in gaugs of ninc-a beoket-men and cicht whers. Sone of them showel the coal from the holi of the ship int." laskets "r lwaes: some hand up the hoxes by ropes and pulcys; and some empty the contents into the barges.

This is all the opration-a mere example of mnscular labenur of the coarsest kinel. It would not have callel for notice in this work, han not legisBative interference given a factitions impurtance to it. Some years ago. when the mumber of these men was alout ? Iow. jomblic-house keepers got into the haloit of actine as mildenen, a mosition which gave them the power of compline the juen to sume nearly all their earnings in drink. The trade foll into such a state, that the mon were virtually slaves to the puldicans. They askeit for the interference of the legrislature: and this was In act wats passed expressly fur these 2010 coalwhiprers. A coul-whinnurs Buard was formen, comprising members named by the Borari of Trade. wthers mamed liy the Corporation of London, and one ly the finmonners socelety. This Eotrd assumed the functions of a mildeman or master coal-whiner ; contracted for the whiphing of ships if conal, and empherd the men. So one bat men registererl on the broks of the Boarl wats allowed to work on the Thames as a cual-whipuer, with the exemption of the crews of the ships and the servants of the coal-owners. This exceptionally-protected trade was maintamed wh the same hasis hy ether atets passed in 1846 and 15.3. In 1505, lowever, a further renewal was refused; and a committee of the House of Lords, in 185, while sympathising with the men, declined to recommend any further special legishation fur them. The cond-nwners aremen with the board of Trade to mantain a Whiphing Ghice, to give the men a refuge from the purnicans, but withent interferiner with the liberty of coulshipper's to cmploy whom they pleasell; and this phan has since hect acted on. The price femmerly "harged was $9 \%$ tu 1s per ton; but machimery van now dn it for $4 l .-$ The ( $\because$ Acts will me lay he referreal to as curimas exanples of wellomeant leqislation, on rommercial natters which are pronferly lecyom the reath of parliammont.

constituted so as to serve as a defensive force also. The ohl coast-guardsmen were in the employment of the Customs department; they were posted alone the shore at spots commanding extensive views of the beach, and were expected to he always on the looknot for smuaglers. In 1846 , the C , was transferred to the Admualty, and under this arrangement, the Ammiralty may, from time to timo, issue orders for the angmentation of the $\mathcal{C}$.. not to exceed 10,000 men in all. Lands, not excecting thre acres each, may be loupht hy the Ammiralty for C. stations. The coasts of the Cniter Kinglom have leen dividet into II districts. Each district is under a nury captain, who has a grard-ship at some port in the district. All the revenue cruisers and defence-gunbats are attached as tenders to the ships, and are mamed therefrom. The able sear men. barne "th the shifs' books, and employed on shore in C. surrice, are in three classes-chief loatmen, commissioned hoatmen, and boatmen. They receive high seaphy, besides $1 s$. 4ll. per day in licu of movimons. and honserent and medical attendance frec. In war-time, all of these men may be called um to serve as regulay sailors on board ship; but their families are allowed to live rent-free during this time. The $\%$ are tanght naval grmency, guntmat exercise and the serving of lani-lutteries. The guard-ships are also empleyed as training-ships for the navy. Besides the 11 Wistrict cuarel-ship, there is a head-quarters' ship. The whale of the ' C. comprisel, in 1860 , about !006 men-riz, 4160 employed afloat, and borne on ships' hooks; $3400 \mathrm{cmpl} \mathrm{m}^{2} \mathrm{ed}$ on shore, and borne (on ships books; and I600 employed un shore, and not borne on shins' hooks.

COAST TOLUNTEERS, or ROYAL NAVAL COAST YOLUNTEELS, is a corps organised for the special defence of the coasts of the United Kingdom, scparate from, lat in connection with the Coast-ruard (g. v). By an act of parliament passed in 185 , the Adminalty was 'mpowered to raise a number, not exceeding To.060, of $U$. V.. to consist of seafaring men and athers, to be entereal for tive years' serrice, and to be excreisen as days in each year, eithur un shiftharid or an share ; but not to be sent more than nol leagu's from the coasts of the United Kinglom, unless in cases if amergency, when the distance mionht he extended to Ito leagnes. One year's active service entitles them to lischarge in cordinary cases; lint in emergencies, they may be ralled ont a second year on receipt of higher pay. Their fay, allowance, and rank eluring exercise and active service is the same as able stamen's. The lomenty to be pain on entering, and the arrangemonts for arms. Wothing anl acoutrements, are left for the Almiralty to settle from time to time. An act passel in 1sing inventel the emmmand of the 1. V. in the chast ghard, the whicers of which are to surnerintomi the trating amb exereving.

CO.ASTANGTRADE, the commere carrial on by seat betwern the differnat perts of the same comntry. COCHABAMDA, a nam of yarions applieations in liolivia. 1 . A river which formes one of the headwaters of the Smazon, 2. a aty on the foregoing river, lying 14.5 miles to tha morth-menth west of Churgisaca, the whef rity of the bolivian republic, and containing about fongo indalitant? It has a temperate anid healdhy dimate, ann is engaged in the manfacture of bothon fabries amt ghass wares. - 3. A department, of which the city just deserined is the empital, in lat. $17^{70}-10^{2}$ of,

 aditione to the precions metals, it yiolds conton, sugar, lycwomes, and timber.
COCIIIN, a protected state of Himbustan undor tho 1 residency of Miculras, hat. $9^{\prime} 4 s^{\prime}-10^{\circ} 50^{\prime}$ N. lome $76^{\circ} 5^{\prime}-76^{\circ} 55^{\prime}$ E. With Mahathar an its N.W. and N., and Travancore on its E . and S., it fronts the Arabian sea on the s.W., and neects Coimbatore towards the N.E. on the water hhed of the Western dhauts. It contains 1!/ss enuare miles, and 258,176 inhabitants. Its hyolrography is singular. The Western thants, which lave here an eleration of fully donn feet, interent the south-west monsom, and remer the chast ono of the must humid regions in the world durinis otane, July, August, and September; whale eron during the remaining eight montlis, anything like an unremitting drought is minsoma, As the space between the mountaius amd the sea is almust on a level with the tide, the comutless streams have cach two contrasted sections-the phanging torrent that beaks into comparatively slart pieces the mars mificent trunks of teak with whiel it is freightel; and the sluggish brook which, lowerer it may vary, accorling to the season, in bradtla and depth, pretty uniformly results in a hackish cotuary. Further, these estuarics, almost continumily loreasted by a narrow belt of higher ermand. form betwen them a backwater or lagron of 120 miles in leagth, and of erery width leetween a fow hamirel yards and 10 miles, which commomicaties at only three puints with the ocean. The cosoa-mit is the most valuable prodnct of the comitry; besiles this tree, however, the forests produce rede celar, anjelly teak, benteak, and many other hard wods, hut these ate now becoming very scarce. The low conntry produces
 arrow-root, and sweet potatues. The p"phation is peculiar in its composition, more "specially as compared with that of the mome easterly parts of the peninsula. The great mass of the puphation are IIimalus, bat there are also Nohammentims, and a large number of Christims and tows. The Jews are classified into white and hack: aml the Christians, dividel between the Syian anm liomish Charches, trace their wigin partly to the Portuguese concurst, and fartly to the hinssionary labours of st Thomas the fimstle. lioth the places of worship and the seminaries of emeation throw light on the relative mombers of the differ ent parties. The latter, on in all, are-English, 5; Malayalam. 69; Tamul. 9; Malratta, 1: Simscrit, 7 : and Hebrew, the firmer are-llindn. 2734; Mobanmediru, 31 ; Jewish, S ; and Christíun, 118.

November are the best months of the year, and most suited to the Emropean constitution.

Amonest the agriculthral protuctions, rice, of which two crops are raised in the year, holds the chief plice. P'otatoes, pease, beaw, melons, and other veretables, maize, tobaceo, cotton, imbigo, tea, ant sugar, are also grown. silk is produced in considerable guantities, Yaluable trees, such as the calmona, lij-nany or scented cagle-wood, bony, rose-woul, iron-wool, saudal-wiond, the vamish-tree, and nany others, flowish on the momtains. The pralm-tribe and the banbou are common in the low lands. The mincral riches of the conntry are very moch neglected; lait gold, silver, iron, copmer, and cual cxist, and are most almment in Tongum. The domestic animals are the clephant, Indian cow, buffalues, lies gats, dogs, and cats, Fowls, of that kimu so lately a mase in this comotry, ducks, gerse, and ligeons, abomid in every sillage.

The most deaded of the will emimulin of ( $:(\therefore$ is the tipro. Elephants are very numeroms in the forests of Tonquin ; and leppards, wolves, bears, wildboars, the rhinuceros, as well as many linds of apes and monkeys, infest the monutainons districts. Serpents and other reptiles are to be uet with in great numbers. Of biets, eagles, peacocks, quails, pautridges, paroqnets, and widd-dncks are amongst the most important. Fisly of very excellent guality swam in the rivers and canals. Tery many are taken on the sea-coast, and carried to cevery part of the country.

Inhutitants.-The Cochin Chinese, like the other penples of the lodo-Chinese Peminsula, are characterised by a Mungolian $f^{\text {digsiugnomy and a mono- }}$ syllahic lauguage. They are lather low in stature -Findaysin fomal the average height of 91 men to le 5 feet $3^{3}$ inches-but well moprortionet, hardy, and netive. A skull rather glohalar than synare, a large month, jrominent lips, hack hair, a yellowish-hrown cumplexina, and a scanty beard, are peculiar to the race. The countenance is romal; aud the common perple hate semerally a goolhumbured cherful expession, but the higher classes atiect the solemn ambleconns. The women have a lighter skin, amd are altogether hetter-looking than the men. Their dress is the old national custume of the Chinuse piner to the: Tartar conumest, and consists, buth for men anl women, of a louse frock, and tronsers of silk or cutton. The hair, which is worn lons, is confined in a roll at the lack of the head. Turbans of crape-hitecls for the men, amd hae for the women-are seneral, thengh a kerchief often serves instead. The Coclhin 'hinese are greatly addicted to smoking, anel betel-nont is the minversal masticatory:
The civilisation of this puople has lecen derived from China: hence their religion and govermment, mamurs and constoms, mearly aptwoximate to the crects, administrative system, and hatrits of that conntry: The three mational religions of Gina Confmeanisn, loudhism, and Taunism, or antiliatimbo of these- dre more or less prevalent ; amb as anmeng the Chinese, the aloration of ancestors is chamon to all chises. 'I're selection of a phace of semblare is a rey grave emsideration, and the

 lowitht.

Cochin Chinese ; but they are very unclean feeders, no flyiug or creeping thing, whether hat, insect, or retilie, coming amiss, The national drink is tea; lut a liquor male from rice is also in use. The connmon dwellings, which are raised two or three feet from the ground, are male of lamboo and thatch; lut the better classes inhabit brick-houses ronfell with, tiles. Women in C. C. are allowed full liberty, and frequently engage in commerce and agriculture. They are kind to their children, and prond of a mumerous offspring. Infanticide is imknown, but the poor sometimes scll the chidren they cannot afford to keep. Marriages are resulated ly law; and hefine they can be contracted, the consent of the lead of the family is required. Pulysmy, or rather a system of conculinage, is allowed, lat ubtains chitly anong the rich. Divorce is also permitted. The laws against adudtery are bery severe, yet amongst single women little or no dissrace attends a lurewh of chastity. The law invests the creditor with the most arbitrary power orer the property, wives, aml family of his debtor.

The mhalintants of Tongmin and C. C. are essentially one people; but the siampese or Loys differ from these in many respects. They have Jowish traditions, olserve circumeision, warship no idol, and observe a day of rest. The Cambodians speak a different language, and bear a great resemblance to the Siamest. In the mometainous parts of the Anamitic empire are cortain rude tribes, who are withont a religion or any notion of a God. The tetal Inpulation of C. C. and dependent conntries has been estimated at $30,000,000$, but on no very correct data. The learmed and official language of the comntry is Chinese.

Goctrment and Administration.-These are after the Chinese molel. The emperor is absolute, but he most govern accorling to the laws. He is assisted by a supreme colncil of high mandarins, six of whom are his ministers. The government officials are divided into military and civil, or literary mandarins. The former have the precedency; and from them the emperor selects his ambassadors, governor-generals, and viceroys.

For administrefice perposes, the country is divided into provinces, departments, districts, and villages. A military gewernor or viceroy, and two high civil mandarins, reside at every persincial caphtal; and the minor divisions have each their regular number of oflicials, who are appointed by the supreme dovernment. The laws are very arbitrary. The hastinalo system is in full force ; indeed, the hamboo may be regarded as a political and social institution, The mandarins, as a class, are described as very corrupt.

In isoo, the Empermr (iia-Loung possessed an arme! of 113,000 men, and a marme of 26,500 , making a total furec of $1: 39,40$ men. It the present time there is suid to le a myal gand of forty regiments (ench mabering 6on men), and to which sho elphants are attached. There are also five furime of tive regiments each, lexides a lucal militia.

The capital of the whole empite is ITue, or Ihala,
 with China, the Portnguese setthment of Mawa, limank, ani Sinsmume. Furty Cindin Chinuse panks :mmatly visit that frot and the linitish SLuits' Seltlenments.

COCK, properly, the nume of the mate of the common domestic fowl (see Fowl), hat very gan rally extended to the males of other kinds of gitlinaceons hirds, and not mifequently employed as a distinctive appellation of the nales even of sume kiuds of small lirels.
The ancients regarded the dnmestic $\mathbb{C}$. as the compminn of Mars, am in berahlry lee is the emblan of strife, of baughtiness, of quarrels, and of victory. Guillin has the follnwing quaint eulngion on the cock: "As sume accome the eagle the quecm, am the swablow or wagtail the liedy, so maly 1 term this the knight anong birds, being buth of molle comage, and also prepared evermore to the battle, havint his comb, for a belmet, his sharp and crovked bill for a falchion to slash and womel lis enomy; and is a complete suldior amed cap-à-rie, he hats his lews armed with spmrs, giving example to the valiant soldier to expl danger by fight, and not by dimht. The cock croweth when he is victor, and giveth a testimony of his compuest. If he is raumusherl, ine shumetle the light and society of men!' 'The ('. is said to have beon the emblem of the ancicut Ganls, who wore it on their helmets for a crest: and though the tradition does not rest on the anthority of any medal or other monoment, and is supused to lave been a mere play of words intween (iullus, a coek, aml Gallus, a Gaul, the C. was phated, aftel the levolution, on the dags and chsime of France.

Is the emblem of watchfulner of inaze of the C. was phaced on the smmuits of chuch-stecples from a very carly period. it is intraduced by artists anongst the emblims of our lomal's passion, in allusion to st l'eter's sm, and fon the eane reason it is ste Peters own cmblum.

Cock Divinatus, or Alemtromisiry, is a methed of cliviming in which a ymug white cock was made the principal actos. The phan pursmed wats to descrabe a cincle, and divide it into as many ergal parts as there are letters in the alphatinet. L'pun cach of the spaces marked liy its reanetive letter, a grain of corn was mitcul;"and the leters from which the fowl pickeal the grams, when put towether. formed the mane of the persun about whom inulity was uade.
 ing to Wealgwom, the word signitied originally a cacked-lat, or a hat with the Toroad tlay leoped up on one sille, and was then applied to the knot of rillwn whth which the loop was ornamontel. Another view is, that it is derived irom conperit, a
beat, me fom of eray trappings. The worl is now, lowevel. restricted to signify an ajpendage t" the lead-dress worn as a military or haval distinction.

Fadnes of distinction were early had rewnrse to in party and civil warfare A sprig of lwom (rdente :raister) was the larlse of the House of flantanime In Dhglamd, dumg the wars betwen the IFMses of Sork and Lancaster, the adherents if the former party were distimgished by a white and the latter ley a fal ruse worn in the cap.

The party organsed at the cmurt of Charles IX. uf France to 1 whetrate the massacre of St Barthatumew. recomised une amother loy a parer eross. thae faction of the Fromele. andosed to Cardanal Alazatin, wore stalke of con for the sume purpse; aud certain military lamls were called Lomecs rertes, from decorating their lances with green twign. officers, or those who by courtesy may be regarded as such-the theory being, that the servant is a private soldier, which often is actually the ease. Fut even such an anthority as Sir lernard Burke expresses a very hesitating opinum on the matter. Acerrling to a writer in Nutos and ?meries (see vol. vii., 21 series, which contains several comamonations on this point), the hack (. was unknown in this comery lefore the recessien of George $I$., who introduced it from lis. Grman duminions. As it is thus the bate of the reignin. lymasty, he consilers that not military and naval ollicers alone, but all retainers of the crown (privy-councillss, deluty-licutemats, \&c.), are entitlen to the distinction.

COCKATOO (Ilyetuluphers), a genus of birds of the farrot-family, or l'sittucidue, distinguished from barmes liy the greater height of the linh, and its being curvel from the lase, and by the lengthenced. monai, and rombed tail. The hem is also large, ane in the true cockatons is sumonuted by a crest of long and puinted feathers, with their tijs directed forwaids, which can le crected and expamded like a fin or depressel at the plasure of the hird. The trine cockatoos are also all of gemerally whitish phuare, hout often fincly tinged with red, orange, and othar colnors, or mixen with these colons in more hrilhant disulay. But the name $C$. is alsn conmonly extended to nearly allied senera, as (ingptorlynchus and Mirroflossus, in hoth of which the phanage is generally liark, and to which belong the bluck recleteros of Australia and of the Indian archiplase. The genus Miccoplosses, to which lechngs the Great Biack (C, or Ciant C. of New Guinta, is remarkable for the structure of the tongue, which is cylimirical, tubular, capable of leing greatly putruled from the mouth, and temmates in a clucen horny tip. All the cockatons are natives of the regions already named. They aboum in Australiat They live not only on fruits ami sceds, lont partly on insect larvat Some of them are frepuently to be seen in confinement in Eurpue, $1^{\text {butienlarly the Lesser Sulphur-crested } U \text {. }}$ (I'ystoluphes sulpherens), which, althongh of compratively tane plumare, is a geueral fivourite on acconut of its docility. None of the cockators leam to speak many woris. Their name is derived fiom their awn proper ery.

COCRATRICE, one of the fabulous monsters, a helief in the existuce of which prevailed among the ancients and during the middle ages. It was sometimes distinguished from, and sometimes iftentified with, the !asilisk. It was always regarded as pussessing similar dearly powers. Its menstrous feneration has abremy inew notieed in the article Bownsk. For protection aqainst it, travellers in Africa are said to have carricel with them its whave the enck, the cowning of which cansed it instantly to dxifes. The worl © is sonxtimes used in tha Enerlish vorim of the oll Testament. Perhaps all that "an satuly la a ffirmed of the meaning $^{\text {a }}$ of the original Ildow, is that it is the name of a bommons serp"nt. 1 n herallry, the $C$ is an imaginary monstor, with the wing of a fowl aml the tail cif a sern"-nt.

Cocker and Derwent, 25 miles sonth-west of Carlisle. It is delightinuly situated in an agricultural district, and has a promenale a mule long along the Derwent. The ruins of a castle, fombled in the emt of the 11 th $c$, staml on a buld beinlit on the left hank of the Cocker, near its jusction with the berwent. The castle was losierect for a month lay the royalists in lots, and afterwards relnced to mins hy the paliamentarians. Near C. is a tumulus, with a Liman camp amd ditch 750 teet in circuit. Nany ancient relics have been fomd near Cockermunth. There are manufactures of linens, woollens, cottons, hats, lowiery, and paper, and in the vicinity, extensive eoral-mines. Wordsworth the poet was burn lerert Pop. $7: 275$. E returns two memlers to parliament.

CO'CK-FIGHTING is said to have originated with the Athenians, ln the carlier part of our history since the conguest, we find little mention of it ; bat it is evident that it existed in the clays of Thomas-i-Becket, aud until the time of the Commonwealth it formished, the pit at Whitehall havms been erected and patronised by royalty. It was molibited in 165t; and although there have been other acts passed with the view of putting it down, it still exists umder prolribition.

The rreatost fuint considerel in choosing encks, is the lored. Formery, there were established favorutes, and bery large smms were given for their chicks. Much art is said to be displayed in the trainine of cocks, and 14 trinming and preparing the cork fir the combat; the fastening on of the spurs is a matter of constimable experience. Toung cocks are called stage; two years is the best age. In tigliting a match, a eertain munber of cocks to be shewn on cither side is aqreed mon, and the day before the match. the cocks are shewn, weighed to the cratest nicety, and matched acoording to their weidhts. Their marks are all also carefully set down. to prevent frickery. The cocks within an ounce of each ofler in weinht are sath to' fiell in, and are matehenl. Those which do not fall in, are mateleed to fight what are called 'lopses. Those which do fall in, come into the merin. The main is fonght for a stake mon each hattle, and so muel for the main, on the wimer of the most battles in the main; while the byes have nothing to do with the man. and are usually forbht for smaller sums. Shomhe the mambers lee equal, so that the main camont be decided, it is asmal to seprate two mane corlss which are matched to light, and are of equal or a dead-weight, and to give or take an onnce either way with one of each of the binhs which would fali into the byes, so as tomake an mueven numiner.

A midaling size is considered the list, and from 3 llos. to uz tut llos. 8 oz is the molium. ('ucks sonntimes ficht in silver spurs, lont more often in sterl. The laws of fighting are vary precise and particntar.

COCK LANE GHOST. In the year 1762, London was thrown into a state of extraordinary excitement by the reported existence of a ghost in the honse of a Mr larsous, in Cock Lane, Smithtield. Strange and maccountable notises were heard in the honse, and a luninous lady, hearing a strong resemhlance to one who, under the wame of Mrs kemt, han once resided in the homse, hat who had dien two years lefore, was sail to have lueen seen. Dark suspicions as to Mr Kent having poisoned the lauly were inmediately aronsed, and were confirmed by the ghost, who, "n being interrogated, answereil, after the fashinn of the spirits of our own day, by knocking. Crowds, incluling In Johnson, were attracted to the bone to licar the ghost, and the great majority heome heliesers. At length a plan was formed by a few scoptics to asectain the real origin of the noises. The girl, from whom the sommts were supposed tu proceed, was taken to another honse by horself, and threatence with the imprisomment of Ler father in Newgate if she did not renew the rappings that evening, the noises haviug for some time been discontinum. She was observen to take a board with ber into bed, and when the nuises took place, no donlot was entertained that they had all along been produced by sinailar methouls. A prosecution was then raised by Mr Kemt, ami Parsons was comdemoed to stand thrice on the pillory for imposture and defamation.
COCK OF THE PLALNS (Tetrao or Centroccreles wrophestumus), the largest of the North Ameriean slecies of grouse. It is about one-third smaller

Cock of the Plains.
than the Eurepean Capercailzic ( $q . v_{0}$ ), or Cock of the Wools. Its phmise is hense and soft, the frevalant colour yellowish-brown, lont beatifully muthol and varim with darker tints; the under pats white, with dark streaks and patches. Oo wheh sith of the bucle is a large lave space, "apable, when the bird struts, of lowing matated into a hemisulu rical sate. The female is smaller, and of hess shony phamage than the male, and is destitate of the meds-sacs. 'Phes here is an inhaintant of the desmate phans on the upper parts of the Colmalia, and in the interion of Califurnia, living in thenes, amd when feenling so much on sheces of Artmisice that its thesh is almost too bitter ta le caten.

 natural omber chorghlyltere, in which the Iower has

It is an :monat phant, thothen with very long bair: with large, solitiry, terminal hate dowers. The rout, stem, leaves, and seed were formerly used in medicine; the seed is still sometinnes suld in Getmany umber the name of Blake Comin (Schwartzkionmel). 'The com (. is a very tromblesonte weed in sone parts of liritain, ansl is rare and slmost unknown in others.
COCKLE (Cardiam), s genus of Lamellibranchiate mollusks, laving a shell of two equal ventricose valves, more or less of a heart-shaped aplearance. The animal has two alductor muscles for alrawing the valves closely together; its foot is remarkably large, and bent in the middle, and is capable of beiner suldenly straightencil, so that the animal may move by a jump. Nore commonly, howevers, the foot is employed for exeavating a loble in the same or mul, in which the $C$. hurrows; and when usud for this purpuse, it is disteruled by beiner filled with water. Cockles are usually gregarious, aud vast numbers are found on simdy amb muddy lanks. The emmmon $\mathbb{C}$. ( $r$. colule) is very aboundant un the sandy parts of the British shores, and is one of one most vahuahle shell-tish, affording much palatable and nutritions humata food. The number of known species is about 200 ; they are most mumerous within the tropies, and particnlarly in the Indian Ocean.-The genns Cor. dium is made the type of a fimily Cordicelor, and of an order Cardiceer, which inchudes Fewterlir, Mactrile, Tellinda, ancl other families.

COCKNEY. This woml is commeted with cockre (Duteh, kokeln, to pimper ; Fir, cogutliner, to daudle), which, according to Werinwoud, means primarily to rock the cridile, and hence to eherish, panper. C. thus meant originally a chilel delicately murtured, aud was hence appliesi to the eitizus of luxurions towns, as oppused to the hambier inhabitants of the country. The French Pass de Coetene, and similar expressions amung other nations, denute a Ctopia-an maginary land of luxurions abondance without labour. London has been fancal fur its luxury from the earliest times-a veritable Cueagre;
and its inlublotants have now abluapriaterl the name of ('mburys.

COCOA-NUT DIDETLE (Bufocer rulus), a larse betle of the fanily Lonformes (i. v.), tribe Lamintir, the larre of which are very destructive in coma-mat plantations, eatime their way in all directions in the stems of the youngre trees. They are destitnte of feet. lage and pulpy, and of repulsive appect; lut are estemed a luxury by the rowhes of the East. They resemble the fruyre wums of South America.
$\operatorname{COCOO} \mathrm{N}$, a silken envelupe which the larse uf mayy insects slm for thement wes immeriately before their transformation into the $\mathrm{p}^{\text {mata }}$ state, and which serves for the protecion of the inactive and helpless pupa. The name is sometimes extembld to coverings fomed of other matrials, hy agghtimation or otherwise. Many insects mix foreign materials of varions kimds with their silken coconos: sme catorinllars, as thene popularly called womlly benrs, workiug into them the hairs with which their own bodies were previmsly covered; and others fastening together the sides of a leaf or of several adjacent leaves. Some of the moths, which attach their silk to leaves, sn that the leaf itself forms part of the pontective covering of the finda, proceed with a mathematical nieety is to the prsition and direction of their threats, more wunderful, if possible, than even that exhibited ly bees in the loulding of their comb. The silken substance of which cocoms are made, is producer much more almudantly liy some kinds of larve than hy wers; the encoons of some being only an "ren inctwork, whidst others form a compact ball. The (: of the common silk-wom exhibits externally a loose ganze-like covering within which is a close and cumpact oval ball; yet all is of one contimuns thread, which may be hinwond from it 1000 feet hing. Different parts of this threut are of different gnalities, lat the stronger part of it may be unwound as easily as a ball of cotton. The insect works from the outsing inwards, and the onter 1 parts of the (? are produced first. The spmerets hy which the C. of the silk-whm and these of other moths are prohnced, are situntenl at the month of the caterpillar; but the larve of a few insects-not lepidopterons-have them at the onposite extremity of the hody. The time ocengint in spiming the $(1$. is very sarous in diferent insects; in the silk-wnm, it extemels to several days.

COCYTUS, the name siven loy the ancients to a liver of Epirns, fod hy the snows of l'indus. and which, after a long umbergmend course, was regard as falling intu the Achernsian Lake.- 'ocytus was alsn the name of a river of the infermal rewiones, a branela of the ityx.

others, but the col-fisheries near the eoasts of Sweden, Teclaml, and the north of Scotland are also important. The Dutch were enraged in the con-fishery as early as the midelle of the 1 th e., and the Enislish resmed for this purpose to the coasts of Iceland alont the same perion. The French have also engared largely in the col-fishery. More than 6000 European vessels are sail to be employed in it, lesides boats along the sloores. The fishery is always caried on by means of lines and hooks, partly by Inng-lines and partly by homd-lines. One man has been known to catch from 490 to 550 fish, on the lanks of Newfommiland, in ton or eleven hours; and eight men to take eighty-score in a day on the bogger Bank. The C. is very voracious. Small tishes, shell-fish. \&e., are used for bait. The C. is used its frome either fresh, salted, or dried. Great quantities of dried C. are carried from Newfometlami to the West Indies, and are consumed also in the Ruman Catholic countrics of the south of Emope. Cod Somds are estecmed a delicacy, ani are often salted, and so sent to market. They are also used in a dried state as isinglass. The recent discorery of the medioinal value of Colliver Oil (4. v.) has added to the economical importance of this tish.
liock (\% and lied C, are mames given to the common (. when its colone is somewhat affected by liviug among weedy rocks.-Baltic (. is a name of the Dorse ( $\mathrm{q} . \mathrm{v}$.).

CO'DA, in Music, is the ending or winding-up of a composition by an extra-melolic phrase, for more onmpetcly establishing the final cadence. It may lie compared to the peroration of an oratorical diseourse.

CODE (Lat. corter and conder), the primary meaning of the Latin word was the trank or stem of a tuee ; latterly, it eame to signify more especially worlen tablets bound together, and eovered with a coating of wax, which were used for writing on. After parchment ani paper were substituted for wool, the name $\therefore$ was still retaned. Cicero aplices it to a bill; lint it was not till still later, in the times of the emproms, that it was used to "xpress a collection of laws and constitutions.

Contes, Romon-1. Cender Greqoriumus and IVer-mompianus.-The term codex never was applied to the laws of the trodve talles, and the earliest collections so ealled were those of Gregorianus or Gregrrins, and Hormogenians. Of these, whether two seprate collections, or two parts of one col-lution-a disputal ${ }^{\text {mint-we }}$ have only fragments. Thing never reesel the imperial authority, but they were fuoted as antheritative compriations in the cumuts, amb they supplied the models on which the sulsempent works of Theodosits and Justinian Wervexemitel.
$\because$ Couter Theoflasionns.-This eompilation was "xcculad by acommission of cight persons, appointed he Illumbina tha lounger in the year 429, and aflowarels inereash tu sixtern. Thle work was

Theodosius has bem, in a great masure, presurvel. It comsists of sixtero lawks, whichare sulolivided into titles and sections. The brist mition is dhat of J. Gothofredus ( 6 vols. fol. I Inerl. Higit), whirh was re-editcel ly Ritter (Lap. 178 - $17!5$ ), This mition contains the Theomosian (: entim, werpt in the first five, and part of the sisth lomk, fire the wimentuetion of which the freviary on ahdement prepared by the orders of Alaric 11., kins of the Visignthe wheh itself may tie regarted as anther (\%.- formal the only guide. Some recent lisenverirs of MS. and palimpsests have added considerahly, not only to our critical knowledge of the contents of this (\%, but have enalled us tu restore several of the grumine constitutions of the lirst five linoks. Of the 26 laws and fragments of laws, which were omitted in the Previary, 62 have leen thus pestured (see Jus Civile Antejustin., Berol. 181.i).
$\therefore$ Codex Justimimeus.-In 228 , the Empuror Iustimian appointed a commission of ten persons, me of whom was the celehated Tribonian (\%.v.), to compile a $C$, ineorporating in it the previons codes of Grecrorianns, Hermogenianus, and 'Jheor dosius, and also the Constitutions ( $\mathrm{I}, \mathrm{v}$ ) . lieseripts (q. v.), and Edicts (q. v.), subseruently issued. The work was performed in fourtenn montlis, and it was then leclared that the new (. shonha supersede the older compilations, $A$ second enti. tion of this work, revisel, and having sulsequent. constitutions, \&e., ineorporated (Coulen licpititer Pralectiomis), is what we now know as the (: of Justinian. It eonsists of twelve books, dividen into titles.

Gothic C.-The laws of the badarians were all collected into a single C., which lore the title of Coter Lequm Bewberorum. Of these varions systoms, the first was that of Alarie, king of the Visiguthe, montiond above, augmented ly the lecislative labours of his suceessors. 'To this C. Was given the title of the Gothie law por caxellence and it was the lest and fullost of all the harbarian encles. The second (. comprised in the cullection was that of the lomgndians: the thim, the sutic law (q. r.), composed when the Franks issued from their German forests; the fonth the law of the lrisions, which dates from the times uf thair conquerus, Pepin and Charles Martel. These, and all the othex codes ly which the tribes of the north which owerthrew the Empire were governed, merged at last in the fenulal system, and a mass of local custrims speedily arose which introluced the greatest nacertainty into jurisprudener.

French Codes.- Charles VII. was the tirst of the lings of France who attempted, hy a series of general ordomunces, to introduce something like uniformity into the legislation of France; asil scyeral of his successors, in particular. Lumis XI. and INemry Inl., entertained the idea of estaldishing a single C. for the whole lingerm. A C., haviner this object in view, was subsementy prepared by Nichel de Marillac, and published in 1629. It consisted of 471 artions, amb is spoken of $1, y$ French jurisconsults in terms of the highest paist: Its reception, howewer, was very putial, emfinm inded to the jurishtation of the batiament of Dijon. Lonis NII., who, amongot his ath r $r$ ambitions, affecter that of becoming the fromel Justinian, published a series of very imputant ordonmances, embracher most of the kemphe departments of the law. The work was exented ley a commission eomposed of the most distinguishinal magistrates and aulvoeates of the kinglom, and Infore the varions ondonances received the malal assent, the king canser them to be discussed with the primpal offictrs of proment. Minutes of these discasions have been preservel, and they
comstitute: onn of the mast mainus mamments if the history of Pren ${ }^{2}$ jurispulener. Nany impurtant chapters were sulscequently achlen to this ${ }^{\prime}$.,

Sum, with the addition of sumbly atempts at legislation haring the perion of anarchy which succeedal, was the besition of allairs whon Napelen assomblad that billiont land of jurisernsulta Tronehot, lowtalis, Merlin, Bigot-1'rammen, Theilhard, Pansey, \&c.-by whose latmors, aided in mo insignificint deerree by that mavellous insingt into human allairs which be himsilf pessess.al, the modern lemislation of France, and of mo small gurtion of the rest of Europe, was called into "xistrmese. Such was the chergy which he contrivel to bring to bear on the work, that the vast cdilice of the C. Napoleon, or C. Civil, was rearel in a sinche year, the first title having leeen prommataial on 5 th Darch 1803, and the last on 3uth March 1s0.4. 'Tli.' (: de Procedure Givile followed in 1806 , the C de Commerce in 1807, the C. d'lnstruction Criminelle in 1508 , and two years afterwarls, the $\because$. P'mal. The brion of the Resturation probluced several comess of less impurtance-forest-laws, fishinu-laws, \& 'lhe ( 6 . Napolen receivet the foren of law in the Mnentries which were sucressively suldingatel by liance; in Italy, in the kinglom of Ililland, in the Hanseatic dejartments, in the eram duchy of Fierg. In the Thenish movinces and in liclsimm, it still forms the lasis of legislation. Reveral other emmeries have since codified their legislation, by far the greater momber of these corles being moditieations of the (: Nap, leon adapted to lucal halits and requirements.

CODICIL, a supplement to a will, wherly any thing mitted is added, or any change demandel lig the altered circumstances of the testator or thin beneficiaries, is effectel. A C. is authenticated in the same manner as a will, and possesses the same privileres when loblograph, ur written by the lams of the testator limself. See Tempament, When.

CODIFICATION, the act of fomming a crule ( q . v.), or systematic cullection of laws. Though a conle, in the wider sense, comprehends fremuratly the whole legislation of a country, thare is a narower sense in which the term is ippitical t.e it particular lowach of lemisham, such as commercial law, criminal law, marine, de. In this lattra sense, some of our general acts of emasmilition, such as the: Merchant Shiphing Act of $185 \%$ ( 17 and 18 Vict. c. (101), may almost lay chim to the character of conles. All attempts at (: in the willer selsse in Eneland have failen, motwithstamhen the ermest alwatey of Lurd lirugham. The doparturent in Which it sums to lomost hareful is the lawmerdant, in which, being mecessanly cosmmelitam beymi the other ingartments of the law, ereat I condit may be derival from the labome of our contimental nejehtumes. A lrief history of 6 in France will be fand nuler Cone.

CoblilN, the nom gisen to anmber of varieties of andle, chingy ned for enlinary jurposes. Some of them are in lidi repate in Britain, both on account of the quality of the fruit and the produe. tivensas of tha tree. The frmit camot easily, low ever. In. kipt lims. In most of the varictics which buar this man", it is large and somewhat conical. The thes are ofto in frombaten ley layers or suckers. or won by slipa, plants thus olbtained lecominy fruitful mach somer than erafted trees.

CODLIN MOTH (Syrulis pomont, a small moth which is vers injuions in apple-orchards in som barts of Fritain, laying its eggs in the cyrs of the
newly formen frnit, within whith the larea feeds, so that the grow th of the froit is arrestel, and it falls promaturely off. This moth is me of the Tortriciele, arreably colonen, with rather shert am broal wing. The cathpillar has sixten feect.

GOD-LIVER GIL is gencraly whaned from the livers of the commom cod (a.v.), but likewise from allien species, as line, dorsc, coal-tish, tursk, \&e. In thase tish. the adipose tissuce (1. v.) containing oil, is almost entirely contine to the liwer, in which they argee with the shark tribe, whilst in ,ther fish, as in the berring ant salmon, thee cil is dumsed aver the contire structure of the animal. (A) is preared largely in Sritain, Nowway, amd Nowfmollam. There are thre varieties of the on soll in ermmeree pute C. O., pete-tromen (.) U, and thathomen Col-tiver wit.

An the preparation of the oil, the lives are phacer in a tul, with a layer of spunce bouches at the buttom, arit sulgectal to presure, whon the light-coloned or pale oil exules, and is rum off ly an opening at the lower part of the thal. As the livers partially patrefy, more oil "scapes, which is larkel than that procured from the frest livers, and constitutes the fale-hwown oil; whilst the residual livers being boiled with water, part with the remaining oil they contain, and yiuh the dark-brown oil. The pale cil thus appmaches more nearly the combition in which the oil is prosent in the livers. White the wither varieties are more ur less impresuated with the protucts of the putrefation of the livers. The purer nil has a peculiar tisly monr and taste, which is not disameable, although it remains for a little time, ani in some cases refuires a little practice to get acenstomed to it. The darker varjeties have mone us less of a lisasreable vimprumatic onowr and taste, and leave in the throat an unpleasant nansens sensation, more difficult to wereone.

The ril man!y concists of oleio and margaric aciels. in ermbination with glycerim, amb hofing in solution the constituents of the bile, acetic arifl, a $\mathrm{p}^{\text {thosphamisen }}$ oil, as also foxine and hromine. These ingroments are most largely present in the fight-columerl wil. ( $\because 0$. is occasimally adulterated with more or less train-oil, to which a little intine has heen added. In the purce varictios of C . O., the presence of any sum almixture can le at once anserved from the disgusting oblour, althond in the dorker varietios of $(: 0$. the tost of mbour camnot he relied om.

As a remedy, $\therefore$. 0 . has a great reputation as afleacions in the treathent of serofatons and tuhermbar diseascrs, mal caperially in Comsumption (4.v.); it has also hem uss d extensively in chrmie demmatism, in mielety aflictims, and in other disanses of the lomes and inints. The virtues of $\because$. W. haw heen ascribell to ionline, homane, and otlow speilic ingredients; but, o" the whole, the most pmathat bew of its actim is that it is simply a faltening agent -a fatty foolamt that it auts loy momishing the systom in cases attemben with maciation, jne ens new milk, eream, and lintior, wr fat bacom, will smotimes act in

 in "maubitol oll 1 "थp)", it is sumetimes of yreat survice in compunction with remerlies suited to tha ? woliar chand of of the dase. In tran thberoular rensmoption, it has for some yars enjoyed in er at reputation; int it is vory fat from having anything
 is commonly taben in losese of from a ilossertHunninil to at tablespanaful three times a day; but 112

COE'IIORNS-namen from the military enginer who invented or intronhed them-are small howitzers or mortars, generally $4 \frac{2}{5}$ indmes calihne. Thesis: implements of war, beher easily moved and malnsterl, and taking little jowler, are fomen regy useful in sicges, if gromeed in grat number. A lattery of 30 or 40 C., by poiring their small shells a* Frenales into the outworks of a fortress, may prevent the garison from effecting a strong vecupation, or malking a demonstration.

CUE'LELMI NTHA (Gr. hollow worms), the name given by $O$ wen to one of the two maders of Eutozoi ( $(\mathrm{f} . \mathrm{v}$ ) , or Intestinal Worms, consisting of those which have a distinct abdominal cavity and intestimal canal, the l'ers intestinues cuvituimes of Guvier Examples of this order are Ascuris, stronghlus, and I'theria.

CUELD-SYRIA (Hollow Syria), now called by the natives El-Binktia, 'the deep plain,' a valley of Byria, exteminer letween the rames of the Leham anch Anti-Lebanon, at an elevation of about 230 feet above the sca. Its length is ahmot 70 miles, and its average breanth 7 . In this valley stand the ruins of Batbek and Chalcis.

CGELIAC A'XIS. See Aorta.
CCE'NOEITES (Gr. Rninos, common, and bios, life), or SVNODITES, the name given to those mouks who live together, in contralistinctions to the Anchorites (I.v.), or bermits, who witholraw from all society, and lise in a soltary fashom. The first (cenotizun, or monastery, was fombed by Pachomins, a disciple of St Antony, alont the year $340 \mathrm{~A} . \mathrm{D}$, at Tabenne, an island iu the Nile. In a slomt time, it reckones 1300 monks, and stimmlated the establishment of numerons wher munds teries in Erght, Nyria, and Palestine.

CONU'RUS. Sce Cestond Worms.
COFFEE. This well-known beverage is an infusion of the roasted allmmen of the seents of the C. tree ( Copfera Acultict), a native of Alyssimia ant Arabia, but now naturalisent in many of the tropical countries colonised by Elaropeans. There are a number of specties of cofion, int this ne only is known to possess waluable properties; the suents of C. Memeritiont prepared in the same way, are bitter and shightly cmetic. The genns belongs to the natural "rder ('inehonccees. It has a tubilar 4-5) cleft corolla, and a suceulent fruit containing two
colls linm with a cartilaginous membrane, anl wach

In a wihl state, the $C$. tree is a slember trate of 1.7 2.5 fret ligh, with fow hamelus; in rultivation, it is adona allownel to beconu home thath is-10

 the whole apperance of the troe is way wather ; and the smell of the thowers is delionas. Wha frint,
 are sminollipule, and of a bomy hamomss. 'ilho

 Hary have not, bat from the Arabice word buna. 'Whey are sometimes, but very incomectls, hesignated 15 bervies.
'Whe 1'. tree sumereds only in conntrins whare the awerme temprature of the year is ibnout $64-70^{\circ}$ F. In Pem and Quto, it is acelimatised at in

$a$, a branclet with leares, fowers, and fruit ; $b$, eection of fruit.
elevation of 600 feet, where, however, frost never necurs; bot ats it delights in a monst atmonhere, it nowhere thrives better than in tropical islames. The fruit rigens in the hothouses of Britaiu, where thw ( 6 tree fregnently howers. C. plantations are laid out pretty mach in the same way everywhore. In undrampes, bomberd hy fruitetres, the C. trees stand 11 rows: they are prumed to tla same luticht, and the gromm butwean them is earefnlly kepat elear if becels. Where the climate is dry, ahmont irrination is meessary, lat the sumply of water is cont ull as the frat lugins to rigen, in orrer to the inprosement if its quality: The tree yideds its first crop in the third year: the crop from a full-erown tree may amount to a pomad of ( 1 , heans. As the ". tree continnes flowering for einht months, its fruits are at any time of very umulual rijemess: in the West Judies and Drazil, thrw whermes are therefore made ammally. The beans are placel on mats ar large floms specially alapted for the propoce. where they are iried hy the sun's rays, bemis meanwhile irequently turned.
$\qquad$

They are passad between rollers to remove the dried pulp of the hean, and the membrane which encloses the seeds themselves, and the C . is afterwards freed from impurities by winnowing, and conveyed in bags to the seaports. As equal care is not. howered, bestowed upon the preparation of it in all places where it is cultivated, there are great differences in fulality and price.- The tarlier history of the C . tree is not very clear. It was not linown to the Greeks or Fomans; hat in Abyssinia and Ethiopia it has been used from time imnemorial: and in Aralia it was certainly in use in the $15 \mathrm{th}_{1} \mathrm{c}$., and over the rest of the East in the 16th century. Towarls the end of the 17 th c ., it was carried from Nocha to Batavia by Wieser, a burgomaster of Ansterdam, where it was soon extensively planted, aud at last young $1^{\text {lants }}$ were sent to the botanical garden at Amsterdam, from which the Paris garden obtained a tree. A layer of this was carried out to Martinique in 1720, where it succeeded so well, that in a few years all the West Indies could be supplied with young trees.

The frallowing sorts are particularly distinguished from each other in commerce. Mocha $O$., which comes from Arabia, and is known loy its small gray beans inclinius to greenish; Jave or Eust Intian $C_{\text {. }}$ which has large yellow beans; Jamuicue $\ell$., with beans somewhat smaller and greenish; Surimem $G$, which has the largest heans; Bourlon C., with loeans pale jellow and almost whitish.

The employment of C . as a beverage was introduced from Arabia, in the 16th c., into Egrypt and Constantinople. Leonhard Rauwolf, a German physician, was probably the first to make C. known in Europe, by the account of his travels printed in 1573. Sonn after the first introluction of C., Coffee-notses arose ahmot everywhere. The first in Eurnpe was established in Constantinolle in 1551. In Lomlon, the first chffe-hnise was opened in Newman's Cont, Cumhill, in 165\%, hy a Greek named I'asquet. This Greek was the servant of an Euglish merchant nanued Edwards, who brought some C. with him from Sinyrna, and whose homse, when the fact lecame knowa, was so througed with friends and visitors to taste the new beverage, that to reliere himself from annuyance, Edwarits established lis servant in a cofleo-house. The first enffechonse in Jrance was quen at Marecille in 1671, and in 1672 there was one opened in Paris, which stom had several competitors.

In Arabia and the Eust, U. is not maually prepareal as a beverage in the sanne way as in Europe. except by Eurojeans. A decoction if the unroastod seeds is there, gratally drunk; and for the 'sultin's Coffee,' the pericarp with the dried pulp, ruasterl, is amployed.

The great lemand for C. has led to the employment of a number of cheaper sulstitutes, of which ('hicony ( F . $v$.) root is the best known in this comatry. Of others, damelion root, carrot, and the seeds of the common yeltow itis may be mentionol, They are prepared by roasting like eothee The seeds of Astrupelus Baticus, alrualy mentioned in the article Asthachacs, are known on the continent of Fhrope as siondish $\ell$, and are sail to bee the lost substitutus for e. jet diseoverel. Jint all these suhntitutes want the most important constitun of of trme U, cofficte; and are therefore very ditferent from it in their qualities. C. is sulpject to grat culuffaration, most of the artieles specificd as sulsti-
 sulatian" of mixhme, haweser, is chicmy, the nse of whoh fore this purpme was legalised by a Trasary

minute was passed in the succeeding year, permitting the mixture and sate of a and chicory, on condition that the parcels coutaiming it were labelled in conspicuous Jetters Mixture of Cufle and Chicory.

The leaves of the $\mathbf{C}$. tree are used in the western part of Sumatra instead of the seeds. They are prepared by quick drying in a manner similar to that in which tea-leaves are prepared; and in this state contain even a larger jroportion of caffeino than the $C$. beans of om shops. It seems not improbable that the use of the C. leaf may yot extend very much.
C. owes its exhilarating aud refreshing preperties to the 1 resence of three substances: 1. Caffeine (q.v.), which occurs in the roasted bean to the extent of $\frac{3}{4}$ to 1 jer cent.; 2. A Tolatile oil, which is not present in the raw bean, but is developed during the process of roasting to the extent of only one part in about 50,000 of the roasted C.; and 3. Astringent acids, resembling tanmic acid, but ealled Cafleo-tannic and Caffeic aeids. The average composition of unroasted $\mathbf{C}$. is as follews:

| ffeine, | 0.8 |
| :---: | :---: |
| Legumin (vegetable caseine), (q. v.), | 13.0 |
| Gum and sugar, | 15.5 |
| Catfeo-tannic and Caffeic acids, | 5 0 |
| Fat and volatile oil, | 13.0 |
| Woody fibre, | 34.0 |
| $\begin{aligned} & \text { Ash, } \\ & \text { Water, } \end{aligned}$ | 6.7 12.0 |
|  | $\overline{100.0}$ |

When the beans are roasted till they assume a reddish-hrown colour, they lose 15 per cent. by weight, and gain 30 jer cent. in bulk; when further roasted till they lecome chestnut-brown, they have lost 20 per cent. by weight, aud increased 50 per cent. in halk; whilst if the roasting is contiuned till the beaus become dark-brown, they lose 25 per cent. in weight, and acquire 50 per cont. in bulk, The beans should never be darker than a light. brown colour, which is quite sufficient to bring out the excellent aroma and other qualities of the C.; and when the roasting is carried further, wore or less charring is the result, and a disagreeable burned smed is iroduced, which tends to overcome the natural pleasant aroma.
C. dues not rutart the action of the bowels, as strong infusions of tea teud to do, partly becanse there is less of the astriugent principhe, and also owing to the presence of the aromatic oil which tends to move the bowels. The impertant offices which C. fultils are, to allay the sensation of hunger ; to produce an exhilarating and refreshing effect: and, most important of all, to diminish the ammint of wear and tear, or waste of the animal fr:me, which proceeds more or less at every moment. Se Notrition. The gromids of C. are very nutritions, from containing so mueh legrmin ; and some of the castem nations talise alvantage of this, and use the grommls as well as the infusion. In other respets, C, pussesses similar yroperties to Taa (q. v.).
An endless varicty of apparaths have been contrivel some of them of great complexity-for freparing C. for the table, The chief olject aimed at is, to whtain the liquor free fown oll sediment. OH. of the simplest and cheapest of these contrivances is the prerolating C.-pht, represented in the bigure. The easiest way of making C,-requiring no special apparatus, and as satisfactory in tho rosult furliaps as any-is to put two ounces of (fresh-ruasted and fresh-ground) C. into a swall saucepan dr emmon C.-pot; pour over it a pint of loviling water, ami alow it to stand, closely covered up, by the silde of the fire (but not to boil) for five mimites. 'Mh' liquor may theu be simply poweyl ofl the grownls, of it may be strained thongh is cloth, had then returned to the sincepan
or C.- bot (previonsly rinsed ont), and warmed again. Soyer recommem?s, that Jrfore the hoiline water is porared in, tha sameopan shomlal be sett diy on the fire, and the powder stirrel till it is quite bot, but

## Percolating Cuffec-pot:

A is the coffee-pot with the nozzle fixed; B is a section of the Fane with the percolator, $l$, inserted, which casily slips into the coffec-pot, and rests on phuse at $\mathrm{C}, \mathrm{C}$; D is a small uppr r percolator, with a curved handle, which lits into the top of F , also resting on plogs, E, J. When eoffee is made in this pot, the percolator, $F$, is placed in its situation wathin the pot; all the openings in the percolutor are coverel gently with coffee; the small upper percolator, 15 , is pat in it a place, and boiliny-water is poured througla it on the coffee, in such quantity as may be wished. The cover and nozzle are immediately fitted on the pot, which is phaced on the fire until steani appears at the spout and cover, when it is instantly withdrawn.
not in the least hurned. In France, a pint of boiling milk is added to a pint of coffec. The chief effect of adiling chicory to $C$. is to depuen the colour.

Esibnce of Coffel is a highly concentrated infusion, mixed to the eonsistence of treacle with extract of chicory and hurned sugar, aud kept in well-corked hottles. liy pouriug builmors water upon a tea-spoonful of the essence, a cup of very tolerable C. may be prepared in a moment.

The trade in $C$. is of great importanee. The following statement is given in $M$ Oulloch's Commerciul Dictionary as "a protty fair estimate.' in 1858, of the exports of C. from the principal places where it is producen, and of the anmal comsumption in those countries into which it is imported from abroal:

In 1859, the total quantity imported into tho United Kingdom was 6.5,353,029 llis., or nearly 30,000 tons, of which $51,708.901 \mathrm{lbs}$, were imported from British possessions, the computed real value being $\pm 1,955,543$, or abont $7 \frac{1}{6}$ d. per 1 b . The quantity retained for home consumption duriug this year was $34,325,526$ lis., on which a duty of 3 d , per lb. in the raw state, and 41. per 1h. in a kilndried, roasted, or ground condition, was leviable.

COHJRE: BUC (Leconimen coffea), ith inbect of the ('ucens (y. . . ) Tumily, whin:h lives on the cofleetreer, and is often extremely destractive to eaffeeplathtitions. It lats of late yoars devastated sume of these in Ceylon. T'o check its ravages, the experiment was tried of introducing into tho plantations the real ient (Formice bamoraglimes), abmondant in many of the fardens and jungles of the island, which feedels greedily on the 1.1 . ; but the tierce assanlts of the ints on the naked skins of the Dalahar coolies, made them threaten to leave the Ustates.
 Clatis.

CO'TPIPR, in Fortification, is one paticular kind of Cepommicre ( $(\mathrm{q} . \mathrm{v}$.).

COFWER, a deep panel in a celling, also ealled a caisson.

COFEER, a easket for keeping jewels or othor valuables. Caskets and chests were sometimes mate of iron, lut more frequently of wood.

COTPWNDDAM, a water-tight structure uspl in engineering for exchang the water from the fom dations of Tringes, quay-walls, \&e. so as to allow of their being loilt chry. Cufferlans are generally formed of timber piles driven elose together (eablat sloceting) in two or more rows, accordine to the clepth of water and the nature of the lontum; the space between the rows, which may rary from fone to ten feet, being spooned out, lown to the solit imd inpervious bottom, aut filled up with elay fuldle. Sometimes they are made of only one row of piles of the full lejght, calked above low-water, with a low or dwarf row vitside to contine the jhiclalle up to that level, or, where there is no wave or currat, with a mere lank of clay thmon against the ontside; and occasionally the uper work is formed of horizontal ] lanking, fixed on open main piles, and ealked in the joints. When the bottom is rock, so as to prevent piles being driven, anl is not muen helow low-water, coferdims are ocuasionally formull of two stone-walls, with a slace lutween filled with elay.

The eaflerdams before spoken of are all what are called hinh-water dasns, and exclude tho water at all states uf the tille. They require tos lue pro. victed with sluces, to allow of the water, when first to be excluded, getting out during the (b), and to shont aganst it darimes the flood. The remennder of the water, and all leasaues, must Jo gint rif of $\mathrm{l} y \mathrm{y}$ pmons, renerally worked ly a steam-angine. For morderately shallow fondatioms, and mone especially where there is a great risu and fill of tide, tidel-dimes are often nsed. These sure smme. times made of sheeting piles, but are oft"m $1 \ldots x+8$ formed of planking or of iron. weishted and sunk into the gromed by diraing insile in the some way that wells are sumk. Jolese dams can only le used for a conple of lonus or thereatunts at low-water, and, of conrse, regnire to be pumpent ont every tide. Dll collerdans requare to be strondy shored within, to prevent their Jrines forced mwades lyy the fressure of the external water; and the rows of piles require to be strongly bolted turether, to averconve the pressure of the clay ludlle, which otherwise would burst them.

CO'FP1N (lat. cophimus, Gr. lrofinos, in both langrages signifying a lasket, coffer, or chest, but never a cotfin). In the ordinary English sense of the word, a ('. is a chest or box in which duaul bodies are lurich or deposited in vanlts; lut the term is also applier to a mould of paste for a phe, and in Printing, to the wooden frame which encluses
the stone on which the form is imposed. In farriery, it signifies the hollow lart of a horse's hoof, it is in the first of these significations alone that we shall eonsider it here.

It has been keenly dismuted amongst scholars, whether it was more usunl with the Greeks to bury thee dearl, or to bum them (see liorlat): that both customs unquestionably prevailed, and eoflins, in the motern sense, were consequently known in Greces. They were called by varims names (survi, putui, \&c.), and composed of various materials, the most common being baked clay, or carthenware. Their forms also variel, sometimes resembling those which we use, sometimes consisting of a narow triangular box, the mulermost side of conrse leing considerably broader than tho others. Jo Fome, the ancient

Fiman Stone-callin, found at York.
practice was to bury the dead, not to bum them; thoughender the Empire, and presious to the recog. nition of Christianity, the latter custom lecame almust miversal. The C. in Rome was called arca or luculus, and was frepuently male of stone, sometimes of a prealiay kime of stone bronght from Assos, in Troas, wlich was said to cmonme all the horly "xeept the tecth in forty days, and which, irom this circumstance, wats called suremparus-an eater of fleth. See Nameophagets. Many Roman stonecoffins lave lucer fonmul in this comatry. The simplest of all collins was that used ly the British Celts and other rode nations, consisting of unhewu stomas set on their eiges, so as to cover the sides an! couls of the grata. one or more that stones being then laid orer the body torm a lint. To these succeded stone-cothins, which were conmomly used for persums of the higher masses in riaxum tinses, and throughont the whole of the midnle accus.

From Jende, however, we larn that the saxons oceasionally employed woul; inh the common precple, beth then and in the sulsergtent Nomman

often formed part of the pavement. Sumetimes they were even above the gromed altogether, and thus became the originals of altar-tombs. These bils were often covered with claborate sculpture, representing crosses and other ormaments. Leaden cothus were occasionally used in the middle ages, as those recently brouglet to light in the Temple Church in Lonim testify, but the slight wooden cases now in common use appear to le of comparatively receut origin. Sue Strutt's Mumners und Customs, and Gongh's Semelchral Monuments.

CO'GCESHALL, a town in the portheast of Essex, on the left bank of the Klackwater, 44 miles north-east of London. Jt lies partly on low ground, near the river, and partly on some gentle ascents rising from it. There is an endowed grammarschoil, fumeled liy Sir liobert Hitcham. The church is one of the finest in Lssex, and has leen recently restored at great cost. it has manufactures of silk, valvet, and tambour-lace. Pop. 3484. It is supmosel to have ficen the Roman Cenonium, and the remains of a Foman tilla have been found. It has the rmins of a Cistercian abbey, founded by King Stepheu in IIt?.

COGNAC, a town of France, in the department of Charente, with a pleasant situation on an old castle-crowned hill overlooking the river Charente. C. is celebrated as the place where the best brandy in France is manufactured, to which it gives its name. Not half the quantity of surcalled Cograc branly, however. is manufactured bere. The cultiration of the vine and distillation of brandy form the clisef industry of the imhabitants. Francis I. was hem here Pop. 7000.

Co'mate. See Agrite:
COGNITION AND SA'SINE, in Scotland, a form of untering an heir in burgage property. See Contexancing.

COGNTZANCE, a term used in a loose manner in Heraldry, sometimes to siguify a Crest (q.v.), smmetimes a Falge (q.v.), or other distinguishing marts.

COGNOSCENTI (Ita]., from Lat. cognosco, to knuw), persons profussing a critical knowledge of works of art, aud of a somewhat more pretentions chasacter than amateurs.

COGNOYIT-riz, actionem (he has confessed the action). in the law of England, is the defembant's written confession that the plantif's eause against him is just and true. A U. nsually proceeds on the combition that defemuant shall le allowed a certain time for the pryment of the delit or danages and costs: and it implicilly authorises the plaintiff's attoruey to do ererything necessary to obtain judment.

COHADBTATION, in the law of scotlan, means living at hed and board tomether, like man :umb wife, aud luing repated to le such. These ciremastineers, when fully "stalilishea, are hele to adfor sutficiont proof that the emintact of marriage hetween the parties hits actually been constituted hy their mutual comsent.
 mome j"rsons. among whom in inheritance is divided. ser !lems, semessun.

COHDSLON is the namp given to that species of Attration (I. F.) by which the pretiches of matter
 and its meatire is the resistane which hoolies offer to any metranical fore tombing to separate their pats. In gasems budies, (1) is altnsether wanting; their atoms ren repel one: another. COLNLNG, in Law. The lrisilere of $C^{\prime}$. montry beine an exchsice preregative of the crown, the crime of commerfeitime the kings money, as it was ealled. was declamed tos be treasom. luith ley the common lat of Encland and ly many statutes. lu scatland, thore continued tol le some difforences in regard to tins crinue, evel after the Cinon hand
extended the treason laws of Eugland to that kinglom.

The whole of the legislation on this subject was at length repealed, and a general act massed for the whole kingdom (2 Will. IV. c. 34). By this statute it is enacted-I. That any one who shall fabricate a coin in imitation of a current goll or sildr coin-or gild silver, or colour any cromterfeit gold or silver coin-m shall alter silver coin with intent to make it pass for gold coinor copper coin, to make it pass for gold or silver coin, shall be punishable with transportation for life, or for a term uot less than seren years, or with imprisonment for a term not excceding four years. 2. That any one who shall impair, diminish, or lighten gold or silver coin, shall be punishable with transportation for seven years, oir imprisonment for three years. :? That any one who shall buy. sell, receive, pray, or put off connterfeit gold or silver coin for a lower value than its denommation, or shall impert counterfeit grhl or silver coin, knowing it to be such, stall be punishahle with transportation for life, or seven years, or with imprisomment for net more than four years. 4. The uttering (q.v.) of hase coil is pumishable with imprisonment fur a year. 5. By subsequent clanses, the possession of ialse money, with intent to utter the same; or of instruments for its falnication ; the conveying such instruments out of the Mint withont anthmity; the fabrication of copper coin, and the altering of current coin so as to make it pass for uriu of a higher denomination, are declared to be offences all of which are visitel with $l^{\text {munish }}$. ments resembling those above mentinnal.
In orler to laing these oflemees within the limits of the statute, it is not necessary that the resemblance of the false to the true coin shall be fory perfect; hut if it lie not such as to deceive a person of mxinary obscration, the attempt to long it into circulation is fraud, and not uttering.

COTR, or COOOA-NUT FI'BRE, the fibre of the husk of the encoa-mit, much rised fur making repes, mats, \&e. The husks are stecped in water, in lits, for six months, wren for a year, and then beaten with a stick till the fibre realily separates. C . is now well known as one of the best materials for cables, on weount of its lightness, elasticity, anil strength. C. ropes are produced in great quantity in the Lacculive Islands. They are entirely marde liy the ham-chietly by womenwithont the aill of machinery of any kind. The manfacture of cocon-mut mats is now carrich on to a comsidemble extent in britain, the hasks heing imported for that purpse. This manafacture is one of the branchas of inlustry in which chilitren are mupherel in the industrial or raseal sehools, and criminals in prisons.

consists in placing the coal in rounl stacks, or in long ridges, nccasionally to the length of 200 feet. During the building of the coal, wooden stakes are driven in, which are afterwarls taken out, and lighted coal introduced at numerous places at the same time. As the coal lecomes beatet, much smoke and rapour are evolved, which mainly consist of tar, water, and coal-gas. Whenever the smoke ceases to be evolved, the process of coking is regarded as concluded, and the mound or ridge of red-bot cinder, or C., is covered over with fine coal-dust, which, excluding the air, extinguishes the combustion. At places where the operation of coking is conducted remularly on the large scale, it is customary to erect brick chimneys or columns, about the height of the proposed monnd, and to buid the coal round these, placing the larger masses in the centre, the smaller pieces outside, and ultimately covering the whole with tine coal or dross.

A more economical plan of preparing C. is to introduce the coal into fire-brick ovens. The coal is introduced by the top, and being lighted, a little air is admitted ly openings in front. Whenever the coal ceases to evolve smoky rapour, every opeming is closed, and the oren is allowed to enol down for 12 to 24 hours. A door in front is then opened, and the $C$. beimg raked out whilst still hot, water is thrown upon it, to stop the combustion. Small conl may le usel if it helongs to the caking kind; and a little water sprinkled over it, causes the caking nperation to proceed more completely. The proportion of $\mathbf{C}$. obtained from coal in Great Britam ranges from 5 to 73 per cent., so that in round mumbers the better class of coal for this purpose loses a fourth of its weight. At the same time, the coal increases in volume to the extent of alrout one-fourth.
C. is a hard, brittle, porous solid, with a colour varying from tron-gray to blackish-gray, and more or less of a metallic lustre, and does not soil the lingers. It absorbs moisture from the air, sometimes to the extent of 30 per cent., amd contains an amount of ash ranging from $\frac{1}{2}$ np to 15 per cent. It gives off no smoke in burning, is of great value as a fuel, cvolving a very large amount of heat, and is useal, not only in locomotive and other furnaces, but also in the smelting of metallic ores.

COKE, Sir Eowafir, a distinguished Euglish lawyer and julce was born at Mileham, in Norfolk, on the 1st of February 1551-1552. Educated at the free grammar-school of Norwich, and at Trinity Gollege, Cimbrimes, he masserl thence to Olifford's lnn. and subsequently to the Inner Temple, to study law, and was called to the bar in April 155. 11 is great ahility, legal learning, and tho tact he exhinitci in the condnct of his cases, secured him an immense practice on the very threshold of his eareer. In 1.is6, he was alpminted recorder of Norwich; in 1.59, recorter of Lomlon, a position he rosigned the same yair for the solicitor-generalship. In the following yar, ho was elected member of parliannat for the connty of Sorfolk, and was
 lo was made attorney-g ral, an ubte he emtinacl t. Chlid until 1666 , wion he was appointed Chiefjustion of the 'romon lleas, the huties of which pestion hoo liselargen in a manner that socured for him a crat mputation. justice, even when lis croven-hearted molleagnos begged the royal pedant's prarlon on their knces for ever having entertained such an opinion. This was
 relieved from his chief-justiceship: hat in no loner time after, the royal farour was in some monsure again extended to him. His sulport of liberal measures in parliament, however, somm bronght him
 he suffered seven months' imprisomment in the Tower. In the third parliament of Charles 1. (lios), C. took an active part in framing the celelnaterl 3iall of lights, and it was in a great measure owing to his alvocacy that the Lords were imburnd to agree to it. C. died 3 l September 1033. It is now best known for his law treatise, Coke yon Littleton, or the First Institute, a work which is still the standard one on all questions of constitutiomal and municipal law in England. His other works are the Srcond, Third, and Fourth Justitutes, The Complete Comholder, and Reading on Fimes: while his collection of law reports, which mate an epoch in the history of law on their appearance, are still of great value for the profession.

COL (Fr. nech), in Geography, is a depression or pass in a monntain-range. In those parts of the Alps where the French language prevails, the passes are usually named cols-as the Col de lialme, the Col du Géant, \&e.

COL A'RCO, in Musie, with the bow, in contra $=$ distinction to piricato.

CO'LA NUT, or KOLA NUT, the seed-not properly a mot-of Cola acuminate or sterculice acuminatu, a tree of the natural order Sterculiacers, a native of the tropical parts of the westem coast of Africa, and cultivated in other tropical comntrics. There are two varieties of the tree-one with broad, and the other with narrow leares. The natives of Guinea valne the seeds very highly, beheving that to take a portion of one of them before their meals, improves the flavour of whatever they nay eat or drink. When sucked or chewed, cola muts reuder the lavour even of very putrid water agrecable. They are said to possess properties anahogous to Permian bark. They are of the size of a pigeon's eger, of a brownish colour, and bitter taste. 'Jhey are mentioned ly almost all travellers in the west of Africa.

CO'LELRG, or FOLBERG, a fortified seaport of Prussia, in the province of Pomerania, on the Persante, near its month in the Baltic, in lat. $54^{\circ} \mathrm{g}^{\prime} \mathrm{N}$., long. $15^{\circ} 34^{\prime} \mathrm{E}$. it stands on a hill, surroundel with swamps, which can be readily laid maler water, and is chietly remarkalbe for the protracted sieges which it has undergone. In Il0:, Duke Boleslans of Puland besieged it in vain. It endured long siege's in the Thirty Years' War, and in the Seven Sears' War, and again in 1807, when it was most gallantly defended agamst the French. C. has manufatures of woollen, salt, and spirits; and salmon and lamprey fisheries. Jop, abont 5000 .

COLBERT, JEAN BartLste, minister of finance to Lonis XIV., was horn at Rheims in l619, ami served his apprenticeshy in a woollea-draper's shop. He afterwards went to Laris, where liss talents introdnced lim to Mazarin, who soon employed him in most important alfairs of state. On his death. bed. Mazarin warmly reconmended et to the liner, who, in 1661, appointel hm controller-general of cinances. C., who found the finances in a rainons condition, immediately began his reforms. Foupuct, the superintendent under Mazarin, was foumd suilty of impoverishing the state by his maladministration, ant imprisoned for life. C. next instituted a comucil of linance and a chamber of justice, to call
to armont the formors of the staterevonues who
 of whinh thry late framdulently possessed thern-

CO'LCHIS, a province of ancient Asia, on the east coast of the [outus Euximus or Black $S$ Sa, situated morth of Armemia, and south of the Cancasus. It nuw forms the Finssion province of Imerethin, with the districts of Mingrelia and Guria. It was celchated in the rery earliest times as the native country of Medea (q.v.), and the goal of the Argonauts (q. v.), and was afterwards letter known to the Greeks as the seat of some culonics of the Milesians. It was noted for its wine and fruits. The Colchians, according to Herodotus, were of Egyptian descent, being relies of the army of Sosustris, which he attempts to prove by various arguments. In the time of this histnrian they were sulject to Persia: subseqnently, they threw off their allegiance, and were ruled by kings of their own; the comntry then came under the dominion of Mithridates, king of Pontus; afterwards, there were princes of Colchis dependent on the Fomans. The principal town was Dioscurias (ealled under the Limmans Sebastopolis), and now Isgaur: the principal river the Phasis.

COLD is the term ly which we signify a relative want if sensible heat. There are, therefore, no determinate boundaries between eold and heat, and it is a mere arlitrary distinction to eall the derrecs of the thermometer below the freezingpint, degrees of cold. When the atnosphere, or any substance which comes in contact with our berly, containe less heat than the boly, it absorls hat from the trody, and we call it cold, Sce Hext.

The physionotical action of $C$. on the animal organion reguives a hrief notice. All animals (the wam-blooded ammals to the greatest extent) haw it errain power of maintaining the heat of the hoily, in definnce of extomal coll, as has treen shewn in the article Axmfil lient. This power is manly dun to a process andorn to combustion, in Which eatom and hydrosen taken into the system in fomi, are made to mite with oxygen derived from the air liy resprimation. If the combustille materings are nit duly furmisued, or if the supply of oxygen the luticint (as in varions diseased conditimist, there mast be a lepression of temperature. Now. if the tompratnre of a biril or manmal (excent in the ease of lyymrnatins animals) he lowered ahnot :30 helnw its nurmal standard (which in birds
 (0, lave\% the death of the animal is the result. The symptoms indiatiner that an anmal or a man is siblering from a depression of the tompurature of the lunly, are, retariation of the circulation of the $h_{1} h_{1}$, cansing lividity of tho skin, which is followed
 citurely hriven from the surfiece, thengh the contraction of the vissels; a penliar torpor of the muscular :unt norbons spotoms at the same time manifusts itself in an minisursition to make any - Ifont an "xrtim, and in intura slempess, The respatory mus ments larome slower, fer physiolongat reasmes, which will day explaned in the articlo
 fume, with incoasing rapdity, till the fatal limit is reached, and death shlervenes.

In hybermating animals (the marmot. dormonse, lat, \&e.), the jower of gerneratine hat within thar own bulies is very slimit, their temperather foll lowing that of the extomal airs, an that it may la. bronght fown nowly th the freming point. It this low tomperatime, the wital antions are saramly fer-
 the vital autivity returna. The respuatuma (in marmots) fall from form to 1-F in the lome and are [wformel withont any apmane mosement of the walls of the chest ; the pmlse sinks from 150 to 1.5 beats in the minute; and the anmals cim with diffeulty ho aronsed from their temor. Fion additional matter loming upron this subject. som the
 Vmamis.

1 . is one of the most powerful dopessing arents, and is a froitful canse of disease, ami ven of deatli. Thus, it is olservel, that whemever the tomperature of the atmosphere is suld inly reluces]. and particularly when it is reduced fuchow tha" freczing point, a considerable additinn takes place to the montality of the country at large. "The effects of C . are, in ordinary circumstances, most apparent amone the aged and the very yonne, and among those suffering from chronic disease; but when a very low temperature is long comtimued, even the healthy are sure to suffer, when impowrished so as not to have suflicient mones of external warmth in their homes. The most direct effects of C. are in the production of what is commonly called frost-bite. The part so affected is deprived of circulation, and does not bleel om being wonnded; it is marble-white or livil, and has lust all sensilitity; and if the exjosure is continucd, or reaction is lromght about too rapidly, it is apt to pass into gangrene. The extremities, especially the fingers and tores, and the tip of the nose, are the parts most liable to frest-Vite. The remedy is execedingly gradual restoration of the temperature, with gentle friction. In Russia, friction with snow is commonly resortel th, so as to seure against tow rapil reaction. ']ho effects of C. upon the general system are deseribed by aretic boyagers, and on medioal detail of them may le fomd in Baron Larrey's interestins aceoment if Numblem's disastrons campaign in linssia. The circulation is mon depressed; diarrhea and rhenmatic bins are frequent; in the enl, the general sensibility becomes impaum, and an inresistible tendency to lic down is experienced, with excessive drowsiness. If this lee not resisted, "leath is certaim. The disease commonly termed 'a colld' has been already described maler Citarrit.

COLD CLELAM is the term applied to a preparation of fatty sulstances, which is used as a mild and cooling dressing for the skin. It may he prepared by heating gently four parts of olive-oil, anil one part of white wax, till a miform liquil mass is obtained, when a little colour and scent may la added; the mixture is then allowed to coul, lant must be sturred the whole time, so as to prevent the concretion and consequent scparation of the wax. Another varicty is prepares with the addition of hogs' lani, but the latter sometimes eme tains common salt, and is liable to hecome more or less rancid. (C. C. softems the skin, and tends to promote the healing of wounds and of chapred hanils.

COLD PIT, or COLD FRAME, in Gardening, is a simple contrivance for the preservation of halfbardy plants throughont winter, and consists of a pit, seldom more than three Seet in depth, and uftan not so mand, walled or unwallel, and coverel with a frame, cither thatched or glazed.

(romeral Monk, in legor, rased a come at Coldentream, which was at first callal - Homk's lio iment;' lut when parliament comenter to wion a hrigule of guarls to Charles Il, this corma nodrr the name of $\therefore$. 1 ., was included in it.

COLEBROOKE, MESIY Tuomas, an emineat Oripntalist, was lurn in 1765. H. early went out to
 umber the Bast Inila Comprany, he was apperinted Sanserit professor in the newly fommen collece at Fort-Willian. Ifterwanls ho" hecame a judee at Dirzapmere, amd sulsequently held the appointment of President of the Bond of Devemue. Burine his residence in India, hee had gelined an "xtmsiv" knowledrs of the literatire of the Valas and than commentators, as well as of the writiogs of anciont Hinlu grammarians, metardysicians, ant mathomaticians. A somud critical judernent martis all his writings. ITe was a directur of the jenural Asiatic society: anl many of the mont valuade essass in the fivintic Ifosiarches were combributend ing lim. These, with other japers, wew aftemweds rapublished as Miseflonfous Exaty) in 2 wols... 14 B. Ho also made translations from the sanserit works on 1 indu law, alwehra arithone and men-uration, which were impertant eontrinations to tho. history of mathomatics. Among his other pardionations, were a dictionary and a grammar of the sunserit language, and treatises on the phlnowhe and on the sicrad lionles of the Himblaz "11." dimi in Lumbn (where he lat for mone veats beon president of the Asiatic Sucinty, XIarla IO, 18.3.

COLEOPTERA. or (OLEODTERいON 1Nste"'s (Gir. kotem, a sheath : and phom, a wing). an order of inscets which, with it little chanme of limits and characters, has luen rewonisel sine the days of Aristotle. The nomber of seceies emanerated by naturalists, amb of whels xampors are watherel in musenms, amonts to many thanamls. The (1. are sometimes collontively ealled leotho. although that name is fencrally more homiter in its aphlication, amb many uf thom are known he wother names, as weevils, lidy-lnes. de. The ghow worm and the histerinurfly (atulmona) inchong to this orletr.

The 1. may be described as four-winged insects, which have the first 1 mir of wines conventem inta crustacenus wing-cases (flyte), and the secom pail of wings folled ernswise under these when mot in use. In some of them, the membramatems wings are wanting, of rulinnatary, in one on in luth soxes. for thare is aftern a liffernace of the sexes in this respect: mare rarely, the elytra also are wanting in one sex, as in the female glowtorm.

## COLERAINE-COLERIDGE.

The head amd antemue vary extremely in different C., the antenne often differ considerably in the male and female of the same species. The first semment of the thurax ( $\mathrm{mothor} \boldsymbol{x}$ ) is greatly larger than the ather two. The almumen is united to the thoras ly its whole width, and not ly a stalk.
have two composite eyes, and no adilitinnal simple or stemmatic eyes (welli). 'The mouth is fitted for cutting, gnawing, tearing, or chewing, but never at all for suction, and exhibits in the greatest perfection of development the complicated structure which belougs to the month of all the masticating or mandibulated insects. See Issects. The annexed cut exbilits the parts of the mouth of a bettle. A, the uror side; $\Gamma$, the under side; A U, the frarts separatel; $a$, $a$, antenne: $e, f$, eyes; ll. upper lip (lulrum); iO, wader lip (hubum); $m$, upter jaws (mandibles) ; me, lower jaws 3 (moxiller); mp, maxillary palpi; In, labial malyi ; $c$ chin (mentum). The upper jaws or mandibles are hard and horny in most of the C., lut comparatively soft in those which feed on regetable juices, or on putrescent amimal matter. The fook of the ( ${ }^{\prime}$. is very varions: some proy on other insects, worms, \&c.; sone feed on carrion: some on rotten wood -some on wood in a fresh and growing state-some on the roots of grases and other plants-some in grain-some on leaves-some on flowers. \&c. The food of their larve is equally vaious; but perfect insects and lave generally agree in loing very mracions. Their digestive organs exhilit great liversitios according to the kinds of their fooll The C. are among the insects which undergo comple te transformations, and of which the pupa is inactive. The larva (grul) is generally like a short thick worm. with a scaly head and month, generally with six legs, of which, however, some species are destitute. Coleopterous insects are distributel over all parts of the world, but are most almulant within the trophes, where also they attain their greatest size and greatest briliaucy of colours. The splendour of the metallic tints exhibited by many of the tropucal species is mot excelted in nature. The orler, however, contains also many species of dull hue, and sufficiently mattractive apmarance. Bany of the C. are noted for the misehine which they do to crops, stoves of provisums, timber aml articles of furmiture, tress, ife; fow of them are of any immodiate use to man, the prineipal of these beins the blistering-ties or tantharikes.

64,372 tons. Pop. 5920. C. returns one member to parliament.

COLERIDGE, Samuel Taylor, was born at Ottery St Mary, in the county of Devon, of which parisli his father was vicar, on the olst October 1772. He was educated at Christ's Hospital, and numbered Charles Lamb among his school-fellows. His acquirements in Greek were extensive; and before his lath year he plunged boldly into the sea of metaphysics, and swam therein until the day of his death. His intustry, if desultory, was great; he read whole libraries. Full of book-knowledge, and without ambition or any practical bent, he was on the point of apmenticing himself to a shoemaker, when his head-master interfered, and rescued to literature and thought his most distinguished scholar. A copy of Mr Bowles's sonnets falling into his hands at this time, attracted him towards poetry, in which for a time he found rest.

In 1791 , C. entered Jesus College, Cambridge. At the miversity; he displayed no mathematical aptitule; his whole mind was given to classics, and he ohtained a prize for a Greek ode. He did not take a degree. During the secont year of his residence at the university, in a fit of despondency, occasioned hy an ussuccessful love matter, he quitted Cambridge for London, and enlisted in the 15th Dragoons, uniler the assumed name of Comberbach. He never adrancel beyond the awkward squad, and he enjoyed to the close the reputation of being the worst rider in the corps. One of the officers luckily discovered his classical acquirements, and, becoming aequainted with his real history, commumicated with his friends, and C. effected his discharge.
On his release, the poet proceeded to Bristol, and making the acquaintance of certain poctic enthu-siasts-Southey was of the number-whose minds were somewhat unsettled by the revolntionary movement in France, he formed a scheme to emigrate to the hanks of the Susquehanma, in North Ancrica, and there, in pastoral peace and plenty, to loning back the golden age to man. C. found, to his surpuise, that before Paradise could be thus regained, nonvy was indispensable; and as of that both he and his friends were absohtely devoid, the dream of 'Pantisocracy' had to be given ups. About this time, Joseph Cottle, bookseller in Bristol, paid C. thirty muneas for a volume of poens, and after many Tehays and the alvancement of additional sums, the volume was published. In 1795, he married Miss Fricker-his friend Southey on the same day wedling another sister-and removed to Nether Stowey, a village in Somersetshire, in which neighbourhood Wordsworth was then staying. It was here, surroumed with bentiful scenery, and in daly commuvication with the graver and intenser spirit of his frienl, that C.'s principal poems were composen. Here he wrote the A ncient Mariner, and the first part of Christalicl, the music of which took captive Sentt and lyron, and which was imitated by luth with no remarkable success. At this time, C. was in theolugy a lontarian, and preached frequently to comargations of that mirious sect. In 17as, he visited Gomany, and sturlich at Göttingen. On lis return to Finglani, lie went to roside at the Lakes, where Windswerth am? sonthey then lived; and then it was that the mickname "Lake prets" was aplled ley the oprosition lieviews to the trio of frimols-a mickame which has long since ceased to lu' a repuoch. In the year in which C. went to live in ('mulneramb, hublishem his mable translation of אchilher's Hullonstion. Having formed a combertion with the Morning Post, he contributed to its columns artiches on ${ }^{\text {mol }}$ itics and literature. In isol, he was at Maltal, atcting as secretary to
the governor, Sir Aexandor Dall, an apmintment he lield nearly a year and it half. In 1808, lue deliveral lectures on Powtry and the Fino Arts at the Royal Institution, lumime ; and the gear atter, he commenced the phlliation of the briond, a serial which dit mot dind moth commerial suceses, By this time, C. had written, if he land mot puhbished, his finest mems; and impnolent, withont resolntion, or strong sense of duty, and with a taste for (ierman metaphysies and ophom gradmeny taking possession of him, he left his wife ami fanily with somthoy, and went to 1 ambon, where he resided first with Mr basil Montughe, ami afterwards, and up till the purind of his death, with Mr Gillman at Itirluate: Ifere the rays of lis spdentid fermins shome more and mine fiffolly throngh clomis of Geman metaflysices, and his montal and momal tibre beeame more anl more debilitated by wimm. The meditated many theological aml ihilosophical works, which were to 'reluce all knowledte into hamony,' ant many epie prems which wore to be the wlory of liturature, and never promessed so far as the first sentence of either. With the subsidence of the writing faculty, the talking facculty develnped itself in U. after a fashion mknown tor incient or molern times. At Mr Gillman's house, he heht weekly convosazioni, discoursing on every subject human and livine for hours; and thither, from all parts of the comitry, ardent young men came mshing to listen to the wislom of the sare, in 'linked sweetness exceedingly 'long drawze cut.' Towarts the close of his life, his religions opinions mulerwent a change, and he became a believer in the Trinity. All intellectual pride had ceased, and the moist childike humility had taken its place. He seemed to he conscions that the greatest powers which for gencrations had been granted to any linglishman had been by him miserably wastel. He died at Mighgate on the 25th July I 835 , in his Goll year.
As an intellectual power, U. manifested himself in a great variety of ways. Compared with his contempmaries, he did not pruluce a very large amont of original peetry; ant of what he did produce, a considerable portion is prosaic and artiticial, lut the residue is of the highest order of merit. No poet ever evolved such expuisite fantasics, or wove onr language into such webs of spiritual melory. He is also to this day the greatest of philosophical critics. He was the first who guve a definite reason for the 'faith that is in us' regarding Shakspeare. He was the first representative of German literature and philosophy in England, ami, till Carlyle came, the most potent. His own I hilosonhical am theological writings, although, from constitutional indo. lence and irresolntion, in some measure ineomplete, are full of incidental merits, and have given a new impulse to English thought; yet it is right to mention here, that in his philosophical vritines he has been convieted of the most extraordinary playiarism. Professor Ferrier, in Dlachuoods Magazine, Auril 1540, 'tracked the footsteps of this literary reaver through the Hercymian brakes' of Scholling's metaphysics (see also Hamilton's licm, note), and has shiom page after page to be piliered frum the Gurman anthor. It has been arignet. Inwever, by way of explanation and ralliation, that U., who certainly did not lack orisimal and penctrating powers as a metaphysician, was, from the sluggishness and irresolution of his mind, better fittect to concoive in outline, and then alint from others in detail, than to elahorate for himself a system of thonght, or even the fragment of a system : while his nuturiously confusel and dreamy menory would be apt to mingle and confornd what was his own with what might have been such. Is a thinker. C. exerted greater influence throngh conversation than
throngh printol lonsks; and to him we are largly indelted for what of excellenee ther yourg men who histenm to him at llighrate, the Storlinge, the Hares, the Marices, aml many ethers have since produced.

 At the miversity, he lecame the alaw of intwn Prate hathits, and after ataming the ornd Fellow. ship in 1sts he was juherel to blase [ndaitul it hy the atuthritios. He then went to Lombom, wrote for the Loudon Mopraine, ard puthished the exin some somets of remarkable leents. Jto alkerward repaired to Ambleside, to receive plupils, lout the scheme failed. Near this little town, st assuciated with genios, he resided till his death in 183:. 10, inkerited mush of his father's renins, and :ll his wrakness of will. He wrote goon verses and lecters prose. As a writer of sarde, lie is lest known ly his somuts, some of which are surpassel only by those of Milton am? Wordsworth. Jlis anst important pose works are the Jorthes of Somphive and Lancashite, and the Life of Mescempor.

COLEROO'N, the largest and most nontherly brach from the Canvers, Hows, after a course of 93
 on the north and Tanjore on the sonth, seprating these two districts thronghont its last so miles. This river is remarkalde for two spemens of what is calleal an envelatt, being something of the nature if a wair or dam. For many years, the bed of the C. had be on olserved to be graduady depening, while that of the Camery, below the point of diversence, was poportionally rising, 80 its constantly to lessen the supplies for the impation of Taujore. In 1836, however, two anakatts, an niper and a lower. were constructal, to prevent the C. from heing further deepened, and to throw more water into the Cauvery-works which were soon fomad to act so powerfully as to require the balance of an anakatt across the Cansery itself.

## COLESEED. See Rape.

CO'LEVORT, a name given to sume of the many cultivatel rarieties of Brassica olvectere (seo Erassica), ami applied, like the numes forecale and Kale, to varjeties differing from the Comme (q. v.) in their ofen heads of leares, which are ned as greens, esprecially in the wint r-montlos. The same name is also given to callages cont for mie before their leaves hase folly clused into Iwals; and the common kinds of eahbage are witen phantal pretty closely tugether, in arder tin lue new in this way, for a supply of greens in wintor and sprine. C., or collet, is samd to have lecen oricinally a mane of the wild plant from which all the cultivated varicties are derized.

## COLABRI. See Hemnusg-birn.

COLIO (from colon-see Abmiftrary (dinal), a name conployed liy the later Greck and the Coman physicians to denote diseases attomded with severe pain amI flatulent distonsim of the ablubmen, whthont diarrimea or homeness of the lawels. COLLEGItTE CHURCHES-so called from having a eollege or chapter, consisting of a dean and canons, attached to them-differ from cathedrals in that the see of the bishop is at the latter. The service is or should he the same in both. They are under the jurisdiction of the lishop of the diocese in which they are situaten, and he pxercises visitorial powers over them. Those renainime in England are Westminster, Windsor, Wolverhampton, Ileytesbury, Southwell, Midlleham; also Drecon in Wales, and Galway in Irelaul. Ripon and Manchester have been constituted the cathedrals of the new dioceses. Some chnches called collegiate (as Beverley) have no chapters.

CO'LLIER, ,TEREMr', a celebrated nonjuring elergyman, was born in Cambridgeshime on the est September 1650. He wout to Canbrikge in lG6o, and took his derree of N.A. in 1676 . At the revolution of liss, he tirst flumged into the stormy waters of controversy, his fueman being luruet, afterwards Bishop of salisbary. For a publication of his at the time, cutitle] The Devertion Disonssed, which gave ofience to the wovermment of William, he was sent to Newgate, where he remamed several montlos. On his release, he rushed anew into the wars of party, and distinguished himself therein hy the publication of several controversial works. Suspected of heing a partisan of the Stnarts, he was aqain arrested in 162 L , and inprismed for a short time in the King's Eench. From this jeriod, his life was a scone of perpotual literay strife, govermment being the mincipal mject of his attack. He died in London, obth April 17:6. C. wrote many looks, including the Ecclesiantict Mistory of Grat Bitcom: but the work by which he is best knom, is his short Jiew of the Immorality ant Profimencess of the English Stuge, fullishod in 169s. Cingreve and Farguhar came to the rescu" of their craft, to the preat delinht of $C$., whe was never hapher than when wiching the satirical whip, and who had no olyeetion to encumber a conple of ofpments at a time. The combat lasted for ten years, and at the cluse, C. remained master of the didh. His strictures on the stare ware needal at the time, and his writings materialty added its subsequent purifieation. Ite was engared in strife up to the close uf his career, and died almost with arms in his hands.

COLLIER, J. Payxe, a wellknown shak. spearian critic and commentatire was born in Lamdon in 1789. In 1520, he published The Praticen foremerou, in a vohunes. lirom 1825 to $182 \pi$, he

 manzeratip ('oncertions in ar ofy of the fotion 1632, in the P',nswswion of I. P. (ullicr. This puldication "xoited treat anmmotion in the literary worl;
 furboly apdanded or furiously assailed. It was
in time generally admitted, that many of them were just corrections of typographical errors; that many, in cases where the author's meaniny was doubtful, displayed very remarkable ingenuity; but that others darkened texts which, to any cye lint that of a commentator's, were transparent chough. Afterwards, however, there arose a controversy of a more serious mature regardiug this volume, one in which the honour of NI' U. was called in question, it being alleged that he had himself written the marginal emendations of his folio in a feigned hand.
COLLI'N. or KOLI'N, a town of Bohemia, picturespucly situated on the left bank of the Elbe, ahout 39 miles cast-south-east of Prague, on the railway between that flace and Tienna. It is surrounled by walls, is well huilt, aud has an old castle, and manufactures of cotton aud potash. Carnelians, garnets, and topazes are foum in the neighbourLond, and polished here. Pop. 6200. In the vicinity was fought, in 1757, the famous battle in which Frederick the Great was defeated by the allied Austrian aud Saxon armies under Marshal Daun.

CO'LLINE is a term appliel to common gelatine, or Glue (q. v.).
cóllingwood, Cumbert, Admral Lord, was horn at Newcastle-upon-Tyne, oth September 1750. Seut to sea as a midshipman at the age of eleven, his life thenceforth, with the exception of some half-lozen years, tras spent wholly on board shij. He was an intimate friend of Nelson, whom he followed up the ladder of promotion step by step, until Nelsen's death left the topmost round vacant for himself. Among the great naval victories in which C. bore a promment part, were those of Lond Howe off Brest in June 1794; of Lord Jervis off Cape St Vincent in 1797; and of Trafalgar in 1805, where he hell the second command. In the last-named engarement, his ship was the first to break throngh the line of the combined French and Stanish ilcets; and after Nelsou had received his death-wound, he assumed the chief direction, and completed gloriously the trinmph which had been so daringly commenced. A peerage was his reward for his gallant conduct in this loattle. After scveral years' able service in the Mediterranean, e. died at sea, March 7, 1810. He was a thorongh seaman, unsurpassed, if not incleed mequallenl, by any officer in the mavy. He never permitted his ardent courage to outrun his cool jobliment. At unce tirm and mild in command, the seamen apmopriately called him their father; while his private virtues and generous kind nature andared him to all who came in contact with him as equals.

CO'LLINS, Astnoxy, an able free-thinking writer ou religions questions, was lom in 1676 , at Heston, near Homislow, in Midulesex. He stuclied at Witu, anl afturwards at King's College, CamIntis!. In 1507, ha published lis bissay conrerning the Use of Humen Frason: and in 1709, his Pristhrugt in Peqfection, \&e., which thatered the elmordmat of that time exceedingly. The controvers "xatcel by this last work induced C. te write his Mistoriral amd ralical Essuty on the Thirthmine Jrtates. Ilis next work was a Jindication of the biven ittrimpes, in reply to the Archbishop of Dublin, who asserted the compatibility of Divine Predestination and $1 l$ uman Frecdom. C. was a philesophical Necessitariane and afterwards advocated his opmions mor" fully in his I'hilasophecat Jupuiry concerniny Liberty and Necessity (1715). In 1711, he weut to ilallant, whe he mate the friendship of
 England, he pulhished his Discourse on Fre-thinking, the best known, and the most important of all
his works. In 1718, he was made treasurer for the connty of Essex; and in 1784 appared lis Ciromuls and lieasons of the Christam litligion, whish gave occasin to no less than thirty-tive replins. Two yoars later, he defondel himsilf in his Schme of Liloral Prophecy; anl in 1727, puhtished his last wonk, a reply to Dr Roger's Bithe Normons on the Necessity of Revelatime and the Truth of 'hrintianity. C. died December 1709. Ihe was at frime and correspondent of Locke, who declared that $\cdot \mathrm{C}$. hat as much love of the truth for the truth's sake, as ever he had met with in amyonly.' Ilis character for integrity and benovolence stood very high.

COLLINS, Whelam, a puet uf considerable merit ius reputation, was born December 2h, 17:1, at Clinchester, where his father was a hatter. 1H: received his education at Wiuchester College and Oxford. In 1742, he published a small volune containing the Oriental E'cloyues, and the Epistle to sir Thomas Honmer. These are not so characteristic of his genius as his later writiners. Althourh the pullication was not attended with sucess, he resolved upon a literary carcer, and with this ohjoct went to London in 174. Here, from tine to time, he pmblished other poems. chie\#ly consisting of odes; lut misfortumes, oceasioned chietly ly his own indolenco and irresolution, finally rendered him a prey to melancholy, which at times decrened into insanity. This has imparted an interest to his memory which his works alone might not have been able to excite. He died at Chiehester in 1756. 'l'he poems which he has left are comparatively few; but they entitle him to no mean rank among the poets of the 18th century. Ile was essentially a lyrical poct; and it is upon his odes that his repatation is principally fonded. All his best quatities are exhibited in the well-known ode on The Passions-a poem which, at the time it was written, was undouldedly one of the tinest odes in the language. The personification of the passions is true and striking, and the variation of the measure is well adapited to the varions emotions to be expressed. Among his other pieces may be mentioned the odes To Lilderty, To Mercy, To Evening, Ode written in 1746, and the first part of the ode To l'ear.

COLI,INS, Willlay, R.A., a distinguished English artist, was born in Great Tichfield Street, London, September 18, 1757. C. early displayed a decided taste for art. In 1807 he entered the Royal Academy as a stnelent, and in the same year he exhinited two pictures at the Acalemy's exhibition. At first, necessity olliged him to devote himself to portraits, but money coming in rapidly, he was soon able to give his genus its leat; and his children swinging on gates, his children gazing in delighted wouderment on the newly discovered nest, his coast-scenes, his groups of prawn-fishers, his shrimpers on the ebbed sea-beach, drew admine eyes as they hung on the Academy walls, and brought remunerative prices. C. was elected I.A. in 1820. In 1536 he visited Italy, and remained there nearly two years, studying the great masters, and sketching monks and prasants, and groaps of bronzed children. In 1539 he sent to the A cademy several Italian pietomes, which were greatly admired. His attempts in another direction-'Our Saviow with the Doctors in the Temple' (exhibited in 1840), and "The Two Disciples at Emmans' (1841)-were not partiendarly successful, and he wisely fell baek on his green tields, his sea-beaches, his rustics, and his children at their games. His leath took place in Lundon on the 17th February 1847.

COLIJNS, Wilidm Wileie, son of the preceding, was born in 1825 , and was educated for the
bar. Hlo is whlly known as in mowlist and mivere. lanoms writer. ine is at mat master of bystory, and can son hite a sectet in at wrappage of circunstance, that, hofore it is discomermet, the whente tissue must he unobled. Bewnal of his works are models of constrmotim; and in working gut his plots, he Aliverges mather to lefe nor right, indulges neither
 strictly to the insinness in hand, puranes his demouemont throngh his thece volunns stantily at the bowd-homet the track of the fugitive. Ilis principal works :ure Antominn, berosil, Mide and Srak, Ajtir

COLLISIONS OF' VESSBLS'. 'Tu prevent
 there is a'rule of the road' at sea as wedl as on lamit. The 'lrimity Honse lays down rerulations which, though mot having the force of law, are recomism 1 by the Admiralty. They are too technical l" he given here; but, in general, they are analomas tu the rules observed by pedestrians in erowded thormaghares, and by vehicles on highways. It is at night that the danger of collision is greatest; aml hence the necessity for a well-arrangen system of lights and other precautions. In the IV reckethert for 1858, pullished ly the Board of Trade, it is shewn that, in that year. there were 50 vessels totally luat by C. ofl the eoasts of the United Kinglom; while 25 other vessels were more or less injured from tho same cause.
COLIODION (Gr. kolloo, to stick). This substance, on its first introduction, employed in surgery as a preservative of wounds, \&e., from contact of air, hy means of the tenacions and tramspurent film which it leaves on evaprationand now, also, in a slightly modified form, remarkable as the basis of a highly sensitive process for takiug pictures by the ageney of light-may ho defined as a solution of Pyroxyline in a mixture of alcohol and ether, to which is added, for phatoeraphic operations, a small quantity of some sulullo ivilide, bromide, or cldoride.

The first step in making $C$. is the preparation of pyoxytine: Take lo fluid ounces of sulphuric acid, specitic gravity 1-8.t, in a dish; add 12 thind drachms of water, and 10 tiluid onuces of witric acil, specific gravity 1.45 ; and raise the temprature to $1 \pm 10$, inmersing the dish in boding water. One ounce of pure linen or paper shoud now be immersed in small pieces at a time, keeping the mixture in motion until the liquid is nearly absorbed ly the linen or 1aper.

The action having enntinued for about ten minutes, the contents of the dish should be plunged into a vessed containing a large tyantity of water, which sloodd be specdily poured off and repatedly changed, motil the linen or paper is so thoronghly washed as not to give the slightest indication of acid to the most delicate test-1mper, after which it should be slowly dried at a low temperature, and preserved in a glass inotle for use.

One hundred and four grains of the pyroxyline
 of pure sulphuric ether, and $\because$ oz. alcohol, speeitic gravity - 840 ; and to this mixture are added 48 grains iodide of cadmim, 30 grams iodide of potassium, and 25 grains bromide of cadmium, dissolved in 4 oz of alcohol, of specitic gravity - 840 . C. thas prepared shomh, after becuming clear by subsidatiun, yich a rich creamy film of odide and bromide of silver on immersion in the mitrate bath.

The foregoing formula yields a C . very suitable for taking what are termen nenative impressions in the camera; but when it is desired to take poritive pictures, cetton wool should be substituted for linen
or paper in the preparation of the pyrosyline, and the iodising solntion should contain iontide of ammonium insteitd of ionbide of potassimm. It is important also that the alcohol employed shoulal he free from orranic impmoties in the shape of fusel atud frain oils, small traces of which mar the purity of the high lights in a prositive, thongh their presence is comparatively harmless in a megrative photmonali. Fon the aletals of manimation involved in, and appratos required for, the pratice of the C'. process, the reader is referred to the execellent treatise by Mr Mardwich on that subject.

COLLODIONISED P IPER PJOCESS. Paper heing substitnted for inliss in this mocess, as a basis upon whinh to supprot the film, a sreat increase in portabily y is arreed at, as the sensitive sheets may he earriel in a pontfolio, and cmployent in the same manmer as alry cullodion plates. There are lifliculties, lowever, in tho way of its successful bactice, which have pronented it from beoming as popular as it deserves to lee, The following is a Frief smmaary of the manipulations. Dlr Combin, the inventor of the brocess, ascertainet that a pereuliar corlodion was metrasite, the formula uf
 parts: proxyline, 15 purts ; iondme, $l_{i}^{1}$ part. The collodim so prepari is ponred an the glass in the usual was, and sensitised in a batb eontaining only one bel cent. of mitrate silver, and a half pore cent. of nitric acis. The plate having remaned in this bath alwot two minutes, is witholvawn, amb freely Washed with water ; it is then immersed in a solntinn of whe pex econt. of zulide of potassimm, to insmre the conplete deeomprsition of the whole of the free mitrate of silver mot remored by the washines. A piece of negative laper is now conaten with a solntion of crelatine, contaning $G$ parts of gelatine $t o l o f$ parts water ; the dinensions of the paper slomat Ge bather less than the shase, and the gelatinised side is lnousht into contate with the collodion film in a dish of wator, any intervening water leming expuled by passing a shass rom lightly over it. The ediges of the collodion tilm which projuct heyond the paper are fuded hate on it, and tho than and paper renoved torether. 'Tho now endmbinnised paiter is latid, film upremost, on a wasp plate, coated with a preservative solution, tompmaserl of cqual parts of abmonem amblonoy, dilated sulficiontly to enable it to flow frecly over the pruer. Jlae film is lastly semsitised in a sulution of nitrate of siluer, 5 parts; clacial acetic acich, of prots; water, 100 parts; it is them freedy washed as lefore in water, and lume uy to dry. As it is apt to wrinlele in dryaner, it should be attzedal by all fome enmors to two lines, maning nme umber the wher.

increase his popularity, and thus excited the enry of Robespierre, who detemined to destroy so formidable a rival. C. therefore touk a prominent part in the overthrow of Pobespierre aud his party in July 1794, but the reaction frllowing this evert proved fatal to himself. C. was expelled from the Convention, ant in March 179. wis sentenced to depurtation to Cayemet, where be eamoht a fever, and ried in great arony, Jannary 8,17 , Sosides revolutionary panphets, $(4$. wrote a grat number of dramas, now utterly forgotten.
(OLLL'SIANS, an acreement between two or more persons tu deframb. The law ahhors C ., and conserperatly it bas the effect of roding every transilction which is fommed unom it. Drramements between hankrupts and ereditors whom they wish to firour, on the cre of bankruptey, aze anougst the most frepuent instances of $C$, anm one of the leardins oljects of all systems of hankrupt law has been to defeat them. In Ebrland, C'. is sprokerb of as 'a deceitfal agreement or contract letween two or more jersons, for the whe to Jring an action against the other, to some evil purpose, as to defraud a third person of his right."-Tomlin's Thetionary. Liut there is no limit to the eiremastances in which the aecontence of $C$. is conceitable in any conntry.
'U'LAIAN, GEOLGE, commonly called 'the Ehder,' a shamatic anthom and theatrical manager of lasto century, was horn at Florence about 1733. In 1760, his tirst chmatie piece, entitled Polly IFoneycomb, was produced at lrury Lame with great snecess. Next year, he crave to the world lis concrly of The Feulous Hife, and in conjunction with Mr Garrick, he in IFG6 wrote The Clandes tine Morriage. In 1761, he lrecame one of the powhasers of Corent Garden Theatre, and lued the ofthe of aetins manager for seven years, after which period he suk his share. In $17 \%$ he porchased the theatie in the Haymarket from Mr Fiote. ln 1755, he was attacked by palsy, and nuver recosered; he died August 14, I794. C. was an iminstrions anthor: lessides pectry and translations, he wrote and adapted upwards of thirty dramatic pieces.

COLATAN, Freorame 'the Sounger, son of the precediug, was born Oetoleer 21, 1762 . His bent lity in the sime direction as his father's, during whose illuess he acted as manger of the IIaymanket Theatre; and on the death of the elder C'mann, licorge IIT. transferred the pratent to his son. C'. hedr, for a considerable time, the office of examiner of physs, In industry, he rivalled his fiether, and he received large sums for his dramatie writugs, sume of winch continue in possession of the stare. Hu was twiee mamied, amd died on the ebth Octobur 18:0. Ilis last literary work was Hemoire, pubhehed in two volumes,

The early name of C., Falm-tntta, the 'Falauy Ferry, so cilled from its proximity to the river, the Mors emmpted into Kalamlu, and by this desisnation it was described about 1340 A.D. as the fincst city of Serendil. At the arrival of the Portaguese, who fortified it 1517 A. I., Kalamlu had merger into Folamba or Columb, which they henceforth wrote Colombo, in honour of Cluistopher Columbus. The Dutch succeeded to the Portuguese (sce Cetron), and C. was taken by the Eritish, 16th Feluruary 1706.-Sir James Emerson Temuent's Cmlon.

## Cólon. See Punctcatron.

COLON, that portion of the large intestine which extenls from the Cocum (q.v.) to the rectum, which is the terminal portion of the intestinal canal. Whether it is derived from koilon, 'hollow,' or koleo, 'I arrest' (hecanse the feeces are retained for a considerable time in it), is meertain. It is divided into the ascenting, the transerse, and the descending C., and the sigmoid flexure. See Almentary Caval.

The whole lenath of the C ., from its commencement in the cecum, to its termination in the rectum, is rather more than four feet. It is retained in its maition by the serons membraue, which envelopis, more or less, all the intestinal viscera, and is termed the I'eritoneum ( $q$. v. ). Its structure is essentially the same as that of the rest of the iutestinal canal, whinh is described in the artiele Digestion, Organs AŇ: Process of ; lat in consequence of a peculiar arrangement of the longitudinal muscular fibres, the interion of the C . is divided into saceuli, which serve to retain its contents for a longer period than if it wore a uniform tube, and thus by extracting water from therm, to reduce them to a more solid consistence, such as is possessed ly normal excrement. It some animals, as in the horse and sher 1 , the shape of the faces is completely mountel in these cells.
COLONEL (formerly Corond, from Lat. roroma, a crom-the chief) is the highest officer of a regiment; any grale above this converts him into a fencral-oficer belonging to the army collectively, rather than to any one regiment. There was an oflice of colonelgeneral in the French army in the lith $c$, and in similar title was afterwards nsel fro a short time in England. liefore the recion of Elizanth, the chiof othece of an English reniment was equtain; lont in 1588, the title of $(C$. hrid lerome familiar. In the British army at the freme day, then ntiep of C . is a sinecure, the real aplive commanter of the corplobig the licutame colnem. (ColoUle, in Art, means vither the proment empheal to promice. a certain etfoct to the "ya, wh the efficet thas frutured. i. e., the tint of a pincture: In the formurs sens., it is treatul of in this work mader the mame of the colome thmoclecos se

must le recarich hy the artist not so much as the result of the application of one or more pigments separately, as of their use in the inmmerable comlinations of which they admit. Synonymons with C. in this sense is the worl colouring. which has cone tor be employed as a substantive, indicating the results of the art of combining and aplying colours in the initative arts.

Intimitely various as are the tints exhitited in colouring, it is remarkalle that they all result from the combination of the three simple, or, as they are called, 1 rimitive or primary colours-ral, blue, and yellou: Sce Spectricm, Lifirt. \&e. Compromiled in various popnotions, cither in twos, or all three together, these thrce coloms pmotnec every hue in nature on in art, every tint that is physically possible. First, when combined in twos, they produce the three sccoidury colours - that is to say, hlue and red make purple or violet; vellow and red, orange: hae and yellow, green. The gays and hrowns, again, are componits of all thee of the primary colours, in whequal and varying 1 romortions.

Complemexthy Colochs are the colours or colour which, with any colour or colours mentioned, make up the three primary culoms, which constitute white light. Thus, if the given (C. be a primitive, its complementary C . is composed of the other troo primitive colours; e.g, the complementary eolone of lue is orange $=$ red and yellow. Again. if the ciren C. lue a secomlary, its complementary C . is the remaining primitive culour. 'Ihus, the complementary C. of green-blue and gellowis red.

Costrast of $C$, is either simple or compount, Each of the pimitive colnurs forms a simple contrast to the iother two. Thus, bue forms a simple contrast to real and to yellow. But if real and yellow be mixed together, the emmpomentary $C$ to Hhe will be proluced-viz., orange, which is the most powerful contrast that can be made to bhe.

Hamony of $C$. consists in the presersation of the same charicter in a pheture thrombout, in so far as colnuring is concernel. It is said tor result from an cqual distribution of the three primary colmos, either pure or in composition; lut such a rule, cven if correct, is "omect with so wile a latitule as scareely to atmit of practical application. The only methon of attaining to a knowledge of hammen of $C$, is th tram the ofe by the chacration of it as exhibited in nature. A smithern sky will be fomi to harmonise with a sumethem lanlsiance, ant consernently, the culoms of whol the one is come posed with those which compose the othor. Than experinent may le made by painting ans Italian sky user an bichish lamiscarn", when "th." want of barmory in the cobaring will be at one "pmarmot. The art of moacring hamony withont sacribeng variety. resernthas that of preservincr light in shandow, :um combinin charness with clepth, wheln we have

this, and in this respect alome, is a sutheient reason for their heing known as colourists par excellence. The art of colouring admits of lecing transmitted to pupils to a greater extent than the highest branch of all.
Sympolical Colours. Sue Simbolism.
COLOUI, a rhetorical tem, which was alp,ted into the techaical language of Euglish plearling. Previons to the passing of the Common Law lrocechure Act of $1852.2(15$ and 16 Vict. c. 76 ), it was a rule that pheatings in confession and aroidince, as aposed to pleating ly way of traverse, should ernfess the matter inlversely alleged, to the extent at least of aumitfing some apmarent richt in the oldosite barty requiring to be encountered and aromben lis the allegation of new matter. This was called giving O . to the plaintiff's claim. All thes curions sultilty, tw which English lawyers till recently were in the hathit of attaching so much valuc, was very prouerly set asile by the statute alove referrel to, 'I'he section which applies to $C$. is the 6 ith.

COLOUR, in Iteraliry: The coloms used are generally red, blue, black, greeu, and puple ; which are called Gules, Azure, Sable, Vert or Sinople, and Purnue. Teme or tawny, and Sanguine or bloodcolour, sometimes nccur, but they are not common. Yellow and white, again, are not colours in the herallie sense, lut metals; they are called or and Argent, and are always represented by gold and silver. It is a fundanental and invariable rule in blazon, not to put C. upon C., or metal upou metal ; thins, if the field be of a metal, the learing must be of a C.. and rice refsta. The only execption is said to be the arms of Jernsalem, which were given to Godfrey of Bonillon, which are aryent, a cross potence or, hetiven foror crosslets of the same. Apparent exceptions to this rule in common llazon are-l. Abatements or marks of cadency or difference, labels, cresecnts, hatous, and the like; and 9 . Extremities or adjurets to animals, or other objects, such as tongues, claws, homs, \&e.; but neither of these aro resarted as inderendent beaings. Colons and metals, when engravert, are generally indicated by dots and lines: on, ghla, ly duts; argent, silver, is left llain: mekn, ref, is indicated loy perpendicular lines from top to huttom; "rure bluc, by horizontal lines from sile to side; soble Dlack, ly horizontal and perpewhicular lines crossing ade other, reat, by diagemal limes from right to lett; purpure, ly diaconal lines from left to rigit ; tome, by diagonal lines from left to right, crossed liy horizontal lines; and swomine, ly lines crossine diagonally from left tor ripht, and from right to lete.
Cotobltablivinatss, a term introluced by Sir barid braster to mominate a defect of vision, owing to which wrtain prsons are cither unalde to lisecma sh simfe mhme, sheh as red, or to distinguish betworn two mones, such as sreen and red, so that they may lo. maid to be hime to real, of to be blime to ©an of two chanes [resented simultanemsly t" the cre. ## COLOURING-COLUPER.

nicer shates of the more composite collurs, such as browas, grays, and wewtral tints. $\therefore$ Inalulity to distinguish between the primary comors, rol, bhu, and yellow, or between these and the secombiry and tertiary colours, such as gremi, purple, mamene, and Inown. The first sort would alyene to he very rare, but well-manked cases of it are m memel, and shew that insensilitity to colours is mot on! ! compatible with distinet vision in other rewandis, but is frequently attesuldel liy a greater power than is usual of perceiving objocts sury faintly ihuminated. Nome of these reombed eases, humerop, have been examined with such citre as to warant the eonchasion, that the (. . was alosulute. It wond appear that where the (: is nemby athmete, derrecs of hminosity supply the pare of shates of colour in giving variety to the aspects of ohjects. The second variety of 0. , where the nicor shan of the more composite enlomers are mistakn, womld aplear to be very common-the rule rather than the exception in the majority of persons, at leat of the male sex, in this cometry; but it is a mathen of doult how far it may nent be referahle to imperfect cultivation of the sense of enkur. In many eases of this kind, however, it ean be shewn that the defect difiers in degree only from that of the thind form. The thind form is the most impurtant varicty of the affection. In extreme eases, although colours are occasionally quite comeetly namel, there is no certainty as to any colnur: in less severe cases, two colours, at least, as red aml green, and generally four, as red, green, olive, and hown, are not distingnished from each other. Yellow wouk apmear to be the eolour whel gives least ifficulty to those not absolntely momstions of colour; while blue, if pure and will illuminated, is readily recognised loy the colour-blime, a few of whum, indeed, describe it as the colour whin they see best. Lied aplears to be the rolour the want of the sense of which may be said to characterise all the colour-lilind. Indeal, br Wilson thinks $C$. might properly enough be callem ancryphic (No-red) vision. He says that while the nurmal eye analyses white light into three culumel elements, one of which is red, the colourdind aye, on the other hand, analyses white light into two elements, neither of which is real.
C. womld appar to le very prevatent. Of 11.51 persons, of various professions, examined in $15-2$ and 1853 at Edinburgh hy Dr George Wilson, oit, ur 1 in 17.7, were colour-bilint; 21 confonmied red with green; 19 confounded hrown with green ; ame 25 confoumad blue with green. In ennsequener of this prevalence of the defect, the insestigatimes into its nature are of the greatest practical impontance. Railway officials, for instance, should always be tested for it, lest, being colonr-hind, they shomled mistalie the varions signals in use on lines of rail, and thus eanse accidents. It appears that in a large class of eases, the defect may hathater loy the use of a species of spectacle invented by l'rofussor J. C. Naxwell.

The suljeet of C. has for some time past received much attention from savans. Sir harid brewster, Sir John Hersehel, Professor Maxwell, anl many others, have mritten on the subject. l'erhaps the mist ingenions investirator of C , and the phemomena of yision generally, is l'rofessom Maxwell, whose writings theren in the Transactions of the Royal Socicties of Londos and Edinburels. will well repay perasal.

COLOURING, as a musical torm, is applien to thuse jassages and barmonic frogresinns in hravura airs affording the singer an "plportunity of display. It is also applied to all grand harmenic combinations in orchestral connwsitions.

mantans a sontherly conrse, till, at Fort FIope, it is bent sharily to the right ly a monatain barrier, so as to enter the Gulf of Gengia harely within the intermational bomidary ; and lastly, across the west, a series of streans, generally meeting long ame narrow inlets of the acean, increase in manitule as one advances tor the north-a series terminating in the Skema, which, with its uphal reservoir, labine Lake, of 1001 miles in length, is lat little iuferior to the Fraser itsolf. Most of the rivers exhibit one or other of two contlicting peonliarities-they cither innolate the soil, or do not water it at all. The chamels are chelly dep ravines, the province, as a whole, homg singenaly mosed and lofty; but wherever the immeliate banks sink or recede, the summer torrent, swollen ly the melting of the winter-snows, is ayt to thood the comparatively forel margin of its ordmary bed. Though the climate, at any civen heght, is far less hyperlurean in winter than in the corresponding belt on the eastern shore of the NuW Work, yet actually, on account of the vastly suprior general elevation, the difference aplairs to be hy no means conspicuous, beyond lit. ent, frost and snow reign during nearly half the year; nay, within lat. $491^{\circ}$, the mountains to the east of Font Hope are rendered impassable for at least seven months by snowdrifts of 25 or 30 fect in depth. Eren in summer, the temperature is said to be unprecedentedly variable, laving been fonnd to range from $31^{\circ}$ to $85^{\circ}$, and again from $85^{\circ}$ to $40^{\circ}$ in the space of less than 24 hours.

In a region of such plysical features, communications must. of course, be equally difficult and expensive. Steamers can ascend the Fraser to Fort Home, a distance of 100 miles from the coast; and the IIarison, an alluent joining the Praser from the right, about is miles lelow Fort Hope, is practicathe, in summer, for a smaller class of vessels up to Fert Donalis, a reach of 45 miles. With this single exceptim, the inland rontes are of the rudest description. U ${ }^{2}$ the left of the Fraser, however, a tuleralile road as far as Lyttom, at the confluence of the Thmopon, is (186I) in course of completion; and, in contimation of the line of the Harrison, an momphinns track of 50 wiles for loats, and of 75 for wheln, is swering romit to strike the Midile Praser in the vicunty of the remoter gold-felis. But the hasin of the Fraser-practically constitut. ing at present the whole of the province is perhalns, at least in all lout its lowest division, more aceessilife from the wast than from the sonth. That main artery is almost parallel with the const, which is itsulf, it many pints, bought still nearer ly loner amb nurove infets; while the internediate strams, each at the lual of its own salt loch, semen to deler a cluse of shorter and easior passages into the inturim. livery known ronte, excyptus, of comse, the Fraser proper u! to Furt llan, in, in sempral, far less practicable in winter than in smmare.

Imderementy of silver, whim has bend disenverem in the lower hasin of the Fraser, and of corpmer, which is known to exist immoliately to the cast of the same, whll may the salid to be miversally diflused. The 'digginus,' dry or wot, acenorling as they are atho or below the linh-water mark, are (minartusicel ley two contrary dillieulios: such as are wet ran be wrought only in the autum, after the fowels lave subsided, ami before the frosts diave set in; the dry ones, arain, almost aberymore suffer, mone ores from the want of the mears of washing There is reasnn th brdice that most of the gotel which has hitherto bexd collected has luen swept down loy flools from mature's magazines in the monntians; nay, the proerss may ln regamed as still fuing on, for rich depusits ane uften so near the surface as to indicate a very recent fommation. In adelition to gold, sitver, ant eopper, abumbane of roal and iron likewise exists.
To its mincral resumers, lifish 6, mainly owes its present position. It was the discovery of enh 1 in 15:7-comeiding as it dill with the expination of the IIudson's Bay Company's licensed monopoly -ilhat len to the establishment of the colony in 185s. In connection with this same canse, adventurers from the United States, from Grat liritain and its depontencies, and even from Clina, have flocked to this lam of pmonse. lint, acemeng to an apmarently miversal law, the abomigines lave suffered from the influx of races superior to themselves. [1 this instance, lowerer, they have themselves chiefly to llame. Profering the 'lisuings' to the hunting and fishing, which were sure to supply them with linth foul and rament, they have perisluat, in a considerable propntim, by famine amblisease. To state the mumber of inhabitants, if it were possible, would he mastinfactory and ilehsive. Till arrienture shall have taben root, and spread fonth brauches, there can searedy be said to be, in the proper semse of the wond, any $l^{\text {min mation at all. }}$ beyuml the towne, or rather villages- phaty mace cantile appentages of the dignings-the extrinsic sujourners, restless and fluctuating in smmer, disaplear alturcther during wintor. Ropesentative
 as jet an impussibility, the ghernor of Britibh C., Whas is also goveruor of Vancouver's Island, unites in his own prevon loth legislative and executive fanctions-lecing suljucet mily to the ce poust facto control of the Colonial semetary. Fow judicial lurposes, there is is supme frimanal, which gres the cirent: while lowal enness wercise at jurisdiction in cases of delth ap to twh. 'lhe province is, moreover, a diocese of the thureh of lingland; and the lishni, who las einht wr ten clergmen muder him, has plantel missinns anome the Indians and the Chinesc immigrants. - The chice town ind port is Now Westminster on the Fraser.

During 1559, the axpmotion of whl, as distinmbisher from its prohertion, is afferally estimated at el 14,600 a menth, or $\mathrm{Ell}(\mathrm{S}, 00 \mathrm{om}$ in all.

 must learned of lioman writers on [ractical agrueulture, was lom at ('adiz, in spam, imn thuristed in the earlier part of the lst c. of the 'lhristian era. For some time. he resided in syan, hat lived chiety at loone, and diad, mast prilalay, at Tarentmi. His great work, le fer Remtion in 1 ? lowks-the loth. On ciardenine is veratien is mberessen to one l'ublins silvinus, ant trats of arable and lasture lands, culture of vince, blives, \& \& , care of domestic animals, \&e., respretive duties of masters and servants, de. A suphbmentary tratise relates to trees. 'This ancient ' Bunk of the Farm' is written in gont Latin, and the infomation is copions, thongh nut precise, and in sume pints of prestimathe acemayy
 aul schneiler ( 1701 -17:7).

CO'LUMN (Lat. iolemmet), a pillar or post, nsually cylindriend in fomm, cmpheyed for the 1 morpose if surpurting a roof, entablathre, or other superstructure. As the carliest halnitations in almost all comatrics were fumed of wool, it is unduestionalide that the earliest colmm, consisted of the tronks of trees. It is said that even at
the prosent divy the "imek paisments of Asiz Miner comstract their wond-hats so ats admost exactly to rescmill: the form and dispmition of parts whicle wo finel in the hrat arrmteretural monnimonts of rlassical antiquity. That tha remas artarally mame usp of won in the ratime time, "berl for then summumatal strentures, we learn on the testimeny of l'ansuluta, Whamentims a mombumat in the mather-phate at 6las which (ton). sisterl of a roof summerted loy pillans of bak: and l'liny tells us that the temple uf Jumo al Mctapmo. tum was suppriten! by gillars mizhle of the stems of vines. From these facts, it is natural to conclude that the stone colmums which canne first into use wath be imitations of the trunks of trues ; and this we are also in a comlition to pens limarically, many of the largest stome colums in Esypt - where, from the scareity of wom, they were carline introduced than elsewhere-leing manifost imitations of the trumk of the palm (figs. 2 and in). In wrdar to prownt them from hasu forcel inter the gromad hy the superincmbent woight, these carly wanden erhmins were patad man me or more large flat stobes, and on the ton another stome was placerl, to preserve them from the deay which the rain sinking intos the wood would have actasionel. In these pinnitive arangements, we phiwly preceive the mom of the three principil parts of the classieal 6 - the shaft, the lase and the capital. As the borie style of architoc. ture was the earliest if the classical styles, the biric

Tig. 2. is maturally the simplat ant mont surve of the
 liarities is what at first sinht semens in the the absence of the lase (fics 4). Tho trus acomat of the mater. huwerer. is, that all the eqlums in the same line of a Ihnte tomphe staml on whe base, wheras, in the ether whers, cach C. has a separate has. Fat it is in the equitals in all the unders, beyptian, 1 bonieal, amb Gothic, that colums dither from whh uther most strikingly (see below). As classival architecture adranced, wrater lightness and Angance were sought after; and this, as recarided the C., was olitaned ly increasing the holght, and diminishing the propertimal thichomss of the shaft. In the lome and Corinthian orders (fys. 5 and 6), as compared with the Derie, this pecnliarity may le distinctly sem.

In ahmost all columns, the shaft tapers gratually
from the bottom 10 the top, thus initating the natural erometh of a tree, and at the same time couformon: to a mechanical rule for ubtaining the

 -upitata of pillan's, wome than lay any other foxtare, thet the aliforent orders aro distingishod, very
mbeh as the Gothic styles are markel by the form of the arch. 'lill the period of the renaiseance, the hosal of a column, in Ewnlish, was called chapiter (chapter), its diminntive hemeg chiapitrell. The thee eqpitals which alonc belong to pure Greek architeeture are lescribed in 'Thomson's well known lines (Libert/1), so cuncisely and accuratcly, that it is neredess to dwall on them in prose:
> 'First linadorned,
> And nolly fiain, the manly Doric rose;
> Thu Iomje then, with decent matron grace,
> Her airy pillar heaved; luxuriant last,
> The rich Corinthian epreal ther wanton wrenth.'

To the three Greek orilers, the Romans adiled two "thers: the Tuscan, which was a variation on the Ooric. or rather is corruption of it and the Compor site, whicln was a conbination of the Ionic and Corinthian, the proportions and geueral character of the Curinthian buing retained, lint the Ionic volutes heing substituted for the Corinthian leafage. As the trumks of trees placed urright, so as to support the roof, unguestimalily lea to the introduction of the stone pillar, there seems to be almost as little doult that the eapital was suggested ly the boughs with which sueli trees might be supposed to be smmomated, on the garlands with which, on festive oceasions, they were mobably encireled and crowned. It inst, when the power of work. ins in stone was linted, imitation of folinge was scarcely attempted; lut the origimal illea being adhered to, it came at last to be carried out with great success in the Eomic and Corinthion caphitas of classical architecture, and in all of the more adranced of the Gothic styles.

The forms of Cothic eapitals are so various, that it is altogether impossible to particularise them here. Begminge with the liomanic-which is often uothing more than a moditieation of the Doric, or a further dehasement of the Tuscan, the side's heing trumeated or flattenel, and some of the monklings onittedthey advance very rapidly in adurwment; and in the style which we call Larly Lhelish, they alrewly frequently consist of a mass of follare, ent with great boldness and fredom, so that the stalks and more prominent of the leafase are entirely cetached. It is remarlablle that, in the decorated style, the capitall lost much uf the richness which it possessed in the earlier styles, aml uften consists only of plain mouldinus, with ur without a lall-1lownor (4.v.), cut on the liedl or howl of the eapitil. Where follation is introntued in this style, it is msually worked with Heater freerlon, ame is free from the rtilliness which characterises carlier work. Animals, ticuras is armome, heads of lushons in milres, ambly the like, stre oftome fonsul in the decoraterl style thomerst their introbluction was mot ma-
 In the propermionar otyo, the cappitals were etitler in furm, amb wompally lows wnammatend them in any of the whers: thanish exom here folines is

 to bue somethas like a momaline at the "prep fart

 flat portion on the tep, ou which the architrave
rester in the elassical onders. These characters belong even to the bightime capitals, which in many wher respects resemblo thase of the other styles. The foliation of buyptian capitals in generally taken from the vesetam prowline to the banks of the Nile (tis 2); but the capitals of this, partientarly in jty later eximples, were intinitely viried both in decoration and in fom.

COLUMN, in Nilidary Evontions, is a mase of soldiers several ranks in ileph, presenting a formation diflerent from that whilh arises from sureading them ont in line. 'lla Pe may bechhme of hrigales, of remiments, of hattations, of of companies; presenting a frontaf limitell width, Int a depoth depenting on the mumber of elements in the column. If a battalion eonsists of ten companies, then a 'hattalion in ( $\because$ ' has all the companies postel one behind :mother. Aecording to the deusity of the (., it is called opmo or cluse. In a battalim, when the rlistance between any one company and the one immoliately before it is such as to aumit of their wheeling into line, the formation is called open U.; when the distance butwen the fromt rank of one company and the rear lank of the one lofore it is only a few yards. it is cluee C.; when intermaliate between these two, it is kalfalistomre column. The relative :dvantages of C. am lime, in drawing up troons for action, are amony the matters closely studied ly the commambers of armies: the French, as a gronem mole, have rather favoured the formation in C.; the English, that in line. Sometimes the name $(?$. is given to that which, in effect, is a small arms.

COLYMBIDA, a family of welbfooter bircts, distinguished by short wings, leys pheced so fir back $^{\text {d }}$ 1]at the bird always assumes an crect pesition when standing, broad flat tasi (olenhow), and a compressed bill, pointed at the tip. 'They are all extrencly arpuatio in their habits, and pussess preat powers of diving as well as of swimming. Shne of them have all the front toes perfectly welland, as the lums or divers (Colmbus); others have the feet lobed, each tow with a separate membranc, as the grebes (lurlieqs). These are the two prineibal gomera. 'The guillemots (Viad) sem to emmect this Emily with the Alcurle.

## CO'LZA. See Pare.

CO'MA, a Greek word used in mediome to sinnify a state of more or less profomd insensibility allied to sleep, lint differing from matura slect in its characters, as well as in the ciremmstances under which it oecurs. In C., the pationt lies on his back, and is cither simply insensible to external impressims, or has a confused and dull perecption of them, with restlessuess and low Delirium ( $1 . \mathrm{r}_{\mathrm{r}}$ ). The former kind of C occurs in apuley and epilepsy, and also in many other opanic diseases of the brain and its membranes, of which, imlecrl, it may be said to le the matmal termination. It is also secn in narcotie jomisoning, and most characteristically in poisoning ly $0_{\text {phom }}(\mathrm{r} . \mathrm{i}$.$) . In the$ most fatal foms, the breathing is rery slow and moisy (smonily or stertaruls), acempmion with juthing of the cheeks; the pulse is at lirst strong :med regular, afterwards feeble; there is often livility; and the pupils are either contracted or excessivly dilated, but in either case immorable amb totally iusensille to light. In the second varicty of C ., there is perpetuad restless deliriom, withont enough of sensibility to leard to spontancons and regular voluntary movements; the patient mutters slightly, and grasps feebly and
withont purpose at ray object in his way; the pupils are commonly tentracted, and the thathe is ily to le dry and brown. This kind of 6 is mainly som in inany fuvera, and forms one of the moles of their fatal tomination. The treatimato of (! is that of the disame on aceidnot hading to it. the plate, it will cut one of the tueth shewn in the figure. Jiy simple machinory, the talle carrying the phate is made to alvance a distance equal to the thickness of one tooth while the cutter is rising, and thes the successive cuts are minale as rejresentel. A slight pull is now sufficient to part the plate into two combs, the teeth of which only renuire diling and timishong.

Tulia-rubiber combs, now so extensively used, are manufactureal hy fressins the camitchonc to the requirel form in monhls, and 'valeanising' or combining it with sulpher afterwards. By this mems a high degree of harluess can be oltainet.

Conlls, or COODLE, an old com-measure, comtaininer four bushels. In many localitics, hollows of valleys anong hills are callel Comps on Coombs (W, com). The word is allied to the Gr. kimbers, a casity : kympe, a ressel.

COMBE, George, a well linown phrenologist and moral philusopher, was horn October 21, 175s, at Eilinhurgh, where he was clucated, Entering the lexal profession, he became a writer to the signct in $181 \%$ and continned to practise until 1537 , when he resolved to derote himself to scientific pursuits, for which he had always manifesturl a predilec. tion. As carly as 1816, he made the acquantance of Dr Spurzhem, while the latter was on a visit to Sentlan, hat at first regardeal his phrenological system with aversion. Investigation, however, comrincel him that phrendeng wais based on fact. The result was his Essetels on Ilerchodoyg (1819). Five years later, apprared his System of Phrenoleng, which became very prpukar, and reached a difth edition in 183\%; besiles loeng reprinted in America, and translated into French and Gemmen. Hat his most inportant prolnction is The Constitution of Men constureal in Relution to Eatconal Objecte (182s; 9th ed. 1800). This work enteavmars to demonstrate, what it is strange shomld ever lave been denied, the essential harmony of the nature of man with the suromuding worh, and the necessity of stulying the laws of mature, in wrom that we may realise the manatages of the extermal world, lessen our expesure to ontward crils, imd carry unt successfully manis physical, moral, ani sonial improment. C $\because$ s anctrines were viokntly Oprosed, being considered by many as inimieal to revealed redigion : hat now that the heat of comtroversy has cooled, it is seen that, in their main aspects, they were not linde to the objections urgenl; and they are, to a laree extent, mopted in the physico-sumal reforms of the present lay. Nearly lotomon coples of the work have been sold in this comntry; numerms ditions have been printed alsn in Aoncrica, and it has been translated into French, (icrman, and Simentish. Comerihuted

COMBINATION merass the ant of unitin: on combining motam active eloments; and it has
 Englame, to menn the mitiner together of persons bavines a commom interest, with a view to promoting that merrest. 'Jlus, it may refer to emplogers anitiner torether to keep no prices or kerl down wages; w it may apply to worknen uniting topether tu keep lup wages. The worl is mon almont exclatsively nsed in selation to the procedings of the workincrelasses for retaining a monomoly of certan

 in certain eircumstances, one of the mont juatifialide amrl beneficial arramements. Like all other hmana instatutions, it has its good amm bad nhoph-the former, when it is nsed for protection; llu latter, whon it is nsed for "plressiom. It is ar pactical oxemplitication of the prevent tanght hy the odd man in the f:tbles whan lie recomanemded iminn to lis sems hy shewing that the humdle of sticks coulil not be broken, lat that each stick coukl be easily suapped when seprarated. The monseipall conmations were combinations t" protect the eitizens arganst the prower of the aristoreraty, and it gromp of the me moncipal corprations formed thenstlves juto a larger C... well known as the Hitus. 'Towns, whos whited intlaence not only' lowerd thes aristocruss, hat exceeded that of many of the lineopean monarchies. The suilds ame wher someties, whether of merehants or artisans, wore combinations estallisherl for protection in virlant times: thouch they were employed to further monomply and interfere with frecdom uf trade, when mare equal laws, and a hisher sucial civilisation, remulered thow wnecesary for mere frotection from external Opmession. 'The frem-masoms are a relie of a oreat
 smalarity to each wher of contempraary toothe
 eqemmstance, that they were lailt ly a lasee" ' of workmen. when all leznmed in the sane schmel the sames rules of art, and who han sectet arrathore. ments which emalmal them tor womk tugnther, and preserve the nomondy of the lmidiner-trixte.

The "hpmessive laws 10 wheln the workingelasses, even in this comotry, were suldected, folly justitical then in combming fur their won protection. 'Jhe nature of thase laws is explamen, though not justifient, hy the fact, that they were less apmessive than the institutions of other eomatries where the work inserlatses wore in actual seridem; and that thy mark, an reality, thes stegs uf progess omwarls from the state of slawery w serform jn which all the working-disses were of old involbed. even in thas
country. The hoasterl freedom of our Saron ancestors wis, indeel, very similar to that of the southern states of North Anerica at the present day, since it was all enjoyed by the upper class to whom the inferior persons were slaves; and the term freeman. still usel in certain municipalities, of old distinguishel those who were not slaves. The statutes of labour still retained a portion of this servitude, laying heary penalties on workers in the rarious trades who refused to work at a regular tixed remuneration -often, of course, below the market value, otherwise it would not require to he protecterl by penaltics. By the Poor Law Act, too, those who would not work might he reritably enslared by being compelled to labour in the service of any householder. It may be said, indeed, to lie the last stage of the emanciration of the working-classes fron stavery when the C. Act was repealet in 1824. This act, which, after all, was a mild relic of the uld laws for coercing workmen, subjected those who, whether verbally or in writing, entered into combinations for keeping up the wages of their labour, or limiting the hours of work, to be pumished by inmrisomment as criminals. There is no doubt that, in defiance of this act, secret combinations were held of a more dangerous and eruel character than any which have occurred since the repealing act of 1824 , which rentered C. itself lawful, hut pmished any attempts to enforce the views of the combining workmen by violence ur intimidation.

Both by the law of the land, and the public opinion on which it rests, it is now allowable for any class of men to combine together for the purpose of fixing the price at which they shall buy or at which they shall sell, prorided their C. be entirely voluntary, and subject no one to coercion. All the landlords of a state, for instance, might combine to keep up the price of grain ; hat if they showd get a law to enable them to exact this price by prohilnting auy of their body from selling for less, or for prohibiting or limiting the importation of foreign grain, then their C . wonld be oppressive. In like manner, a humdred bricklayers or a lundred tailors may combine not to work for less than a certain renumeration, or not to work more than a certain number of hours daily; and they are quite free to do so, provided they do not coerce any one to join their C., or do not interfere with those who are content to work on lower terms. The difficulty is to discover coercion. When there is actual assanlt, or the threat of violence, the matter is clear; lant a formidable C. spreads terror without actually inflicting or threatening violence, ly a tacit unilerstanding that it rill be indlicted, if needful. It may be proved, for instance, as in the case of the great strike by the Lomblon buidling workmen in $1559-1860$, that a workman coming from the country to fulfil an engagemunt, is met at the station when he arrives by a deputation of the uniomists, who accompany him to a tavern, ansl never lose sight of him matil they have math" him one of their bouly-there can scldom be a doubt that such a person is intimidated, though it is ditticult to prove that he did not yield to moral prersuasion.

Thoush free combinations among the working. classes are lemal, their policy as in matter of selfinterest is cury questionable. It is moly by means of that coercion which must be avoiled, that they can ever suceerl in connteratine the law of suply and demand; and esory attrompt to do so, ends in calimitons resulta to themselves. The unvaryine listory of condinations to raise wares, is esther that new hands and lomght in, who drive the combining workmen mit of the market, or that the eantal and the trat, dimb thair way to some other flace where

146
production is free. The occasion when workmen combine is generally the operation of some cause reducing their position, and the 0 , in the end only acgrarates the pressure downwards. For instance, the canse of the great muilding-strike already referred to, was, that workmen were too numer-ous-the trade was overstocked. To meet the depressing effect of this, they resolved, while keeping up their oll wages, to give an hour less of work in return, thinking that the supernumerary hands would be employed to make up the deficiency in the suply of lalour. On the contrary, workmen were brought from a distance to supply the place of the men who struck, and these tinding the surphes of labour against which they tere struggling aggravated, had to content themselves with filling up the vacancies so created in the country lahourmarket, or by less remmerative occupations; and this after they had modergone a course of privations which causeit much mortality among themselves and their families. The same result followed the great colliery (. of 184 , when the men, because they were 40,000 strong, thought they could carry all before them. After terrible sufferings, they returned to the pits, only to find that others occupied their places. The evils of combinations, of course, spread beyond the mere workmen concerncd, but it is on these and their families that they fall heariest. The predictions that combinations would drive our staple manufactures to other countries, and destroy our productive pre-eminence, lave not been verified. On the contrary, the resonrces to which employers have been driven by comlinations have opened new paths of enterprise, and have had a special influence in advancing machinery, by prompting inventions to supersede hand-labour.

COMDINATION, Laws of, in Chemistry. See Atome Theony.
COMBINATIONS, in Mathematics. See Permotations.

COMBiNG, of wool, cotton, \&e. See Camdivg.
COMBRETA'CEFA, a natural order of exogenous plants, consisting of trees and shrubs, all natives of tropical countries. It contains abont 200 known species, most of which are characterised by astringency.

COMIBU'STION is the term applicd to the process of burning, which usually consists in the oxygen of the air umiting with the constituents of the comhustible substance. Thus, the C. of coal is due to the oxygen of the air passing into a state of chemical mion with the carbon ant the hydrogen of the conl, forming carbonic acid $\left(\mathrm{CO}_{2}\right)$ and water-vapour (116). Such chemical combinations are always accompanien ly the production of more or less heat, as in the case if decaying wood and other vegetable matter; but it is only when the action is so rapid as to evolve intense heat accompanied by light, that the process is called homing or combustion. Thongh the gaseons oxygen has as much to do with the process as the more solin material, coal, wood, papro, or cloth, yet the latter is alone styled the rombustible or burning borly, whilst the oxygen is invariahly named the supporler of combustion. A few substances lurn at orlinary temperatures, such as phosphorus, which glows when exposed to the air: lut the generality of substances, such as wood, coal, \&c., repuire to lin raised in temperature or be sid tire to before they possess the power of combining with the oxyern of the air. The amone of heat given out ly the varions combustihles whan burned, is copable of beine mosurcol, and is detinitc. The same weight of the same combustible invariably owolves the sane amone of heat during its complete
C.: hut different emmbustible sulstances give of different amounts of heat. The modo in which the heat evolved may be measurea, is either (1.) T's observe the quantity of ice which a giton weight of the combustille will melt whil homug; (i.) 'Jo notice the weight of wathe whilh the emmbstible will convert into steam ; or (:\%) To pstmate the number of ponnds of water which the burning borly will ruse from $30^{\circ}$ to 212 F . 'The last plan is the more easily managed and aremate, mund serves as the index in the following tahle, which gives the number of immuls of water raised from : $: 2_{2}$ to $21 w^{\prime} \mathrm{E}$, during the C . of one peunt of each af the burning londies:

| " from wood |
| :---: |
| Wood, aried, |
| 11 |
| Coral, bitumimous, |
| and Peat, |
| OHve of, wax, |
| Ether, |
| ugen |

| 78 | lue of wheme |
| :---: | :---: |
| \% | " |
| 36 | " |
| 2 | , |
| 60 | " |
| 2.5 to 20 | " |
| 675 | " |
| 510 to 05 | " |
| 80 | " |
| 2365 | " |

The amount of heat evolved appears, however, to he proportional to the quantity of oxygen requirel tu hurn the various combustibles. Thus, when a similar volume of oxygen gas, or even ordinary air, is allowed to flow against the various combustible substances, the following results are obtained:
Obe lb. oxgecn combling with
Raises from 3at to 212 degrees F .
Hydrogen
Cinacoal,
Ether,
$29 \frac{1}{2}$ lbs. of water.
Ether,
29
23
4
43 "
While the absolute amonnt of heat evolved during the O . of any burning body is the same. yet the sensible heat may vary according to the rapidity of the pocess. Thus, when phosphorus is exposed to the air at ordimary temperatures, it very slowly combines with oxygen, and gives out little heat at any one moment, but it is diffused over a great length of time; whilst if the phosphorus is sut fire to in the air, it burns vividly, and gives out much heat amd light for a short time; and still further, if the burwing phosphorus be placed in pure oxygen, it enters into most vivid C., and ewhes a most intense heat and brilliant light for a still shorter time. In the latter instances, the heat evolved at any one moment is greater, becouse more rapid, than that given off at the same time during the slower process of C.; but when allowed to proced to a termination, there is as much heat prontuced during the whole time occupied in its development. The same remark applies to the conl placed in il furnace. So long as the door of the furnace is open, and there is little draft of air throngh the finel, a moderate amount of hat is evolved, which may last for several hours: but when the door is shot and much ain is drawn through the coal, the latter is more quickly lurned, and more heat is evolved during a shorter period of time than before, but in the long-rmen there is the same amonnt of heat evolved.

## Co'medy. Sce Dramia.

Coménius, John Amos, the most distinguished educational reformer of the early part of the 17th c., was born on the esth of March 1592. aecording to some, at Comna, near Brünn ; according to others, at Niwnitz, in Moravia. His parents belouged to the community of the Moravian Brethren. C. studied at Herhorn, and then at Heidelberg, after which he travelled throngh Molland and Englame, and at last settled at lissa, in I'oland, where he was choses bishop of the Moravian lirethren. In 16ス1, he 1 mblished his Januo Linguarum Jisw rute, Which was translated into many European, and cven
pmints mut a mothenl of learming langunges now at that time, which may lee ralled the intoitive or pereaptiy system, in which the pupils were tanght by a series of hessoms on subjects casily understood ins atpreciahle by the senses-such as matural liss-
 dee ! adso pablinhed alont the sann time the Rutio
 Sohemeruan (lisis), remblished with rmarks by Buldans (Halle, 170-2) :and his Pansophier Prodromus (16:3). In lall, r? was invital to linglanl, to ansist in reforming the systom uf puldic justruction ; lont as the heaking nut of the civil war prevented tho execution of this design, he went th Swelen, Where he wats patronised hy Oxenstiem, who gave him a comuission to "Iraw up a plan for the organisation of sehoms in Swella, which he completent at Elhinge four years afterwarls. He next went to Hengary for a similar purpose. Here he eompreal his celchratol ordis Sensualium Pictues, or The Visible World (Nitra. (6iss), the first picture-book for ehillren, which has heen often reprinted amel imitated. Finally, he settled in Amsterdam, where he published several other works. U. died at Natarden on the 15th Octoler 1671. In the latter years of his life, C. gave way to fanaticism, misinterpreted the lievelation of St John to suit his fancins of the existing state of Eurore, and expected the millemium in 16.2. An isteresting account of the wanderings and snfferings of $C$, and of his great services in the cause of polular education, is given in K. G. von Rawner's Gischichte der P'adagogik.

CO'MES, an ancient officer, with territorial jurisuliction. See Fard.

COMLT. The word C . is derived from the Gr: Kome, hair, a title which had its origin in the hairy appearance often exhilited loy the haze cir luminous vapuar, the presence of which is at first sicht the most striking characteristic of the celestial bodies ealled by this name. The general features of a U. are-a definite point or nucleus, a nebulons light surrounding the muclens, and a luminous train preceding or following the nuclens. Anemently, when the train preceded the nucleus-as is the case when a C. has passed its perihelion, and recedes from the sun-it was called the heard, being only termed the tail when seen following the nucleus as the sun is approached. This distinction has disappeared from all modern astronomical works, and the latter name is given to the apendage, whatever its apparent position. Neither this luminous attendant, the tail, nor the nuclens, is now consideral an essential cometary dement, Jnat all bodies are classed as comets which have a motion of their own, and describe orlits of an extremely clongated form. There are several $I_{\text {lain pints of difference thetween }}$ comets and planets. The plancts move in the same direction, from west to east, which is astronomically called 'direct motion;' hut the movements of comets are often from east to west, or retrograde. The orthits of all the plancts are confined to a zone of no great breadth on cither sile of the eckiptic ; but the laths of comets cont the ecliptic in every direction, some being even perpenticular to it. The orbits of all the phanets are nearly circular ; or, more properly speaking, are ellipses of very small eccentricity. The orbits of comets, on the other hand, present every variety of eccentricity, some of them heing ellipses or elongated closed orbits of varions degrees of elongation ; others, hypertolas; while the majority have a form of artit nut liffering seasibly from the prabala, which is the limiting form of curve to whicls buth the cllipse and hytierbola approximate, moler given conditions.

Let $p$ be the point of peribelion passage of a C .,

## COMIET

aml lot the direction of its motion be in the direction indicaten ly the arrow. There is a cortam velocity of motion at this point which woull give the of hit the fom of a parabola, por ${ }^{1}$, the diwetion of motion always approached to being parallel with

the strainht line thrminh $p \mathrm{~s}$. Any velocity less than this would carse it to desmine a closed curwe pasat ; any grater velocity wonld canse it to describe the hyperbola $p^{3}$. in which case it wombarproximate to the direction of the straight line (D) and would never return. This would le the case if there were no disturbing force to interfere with the sm's attraction: and conversely, connets approchiner the sun along the various praths above described, would pass the perihelion with the varions rolncities above indieatend. Any attraction, however, of an extranc. mis hoaly interfering with the attraction of the smo might change the orbit from the ellipese to the hyperbola. and viem eract, of from the paratula to cither. As, however, there is ming one parabla correspmoling to intinite sets of ellipses and hyperbolas. and interfering cause is not likely to change the orlit from an ellijse or hanombla to the parabolic form. Df aluout son eomets whose urlits have bern obtained with more or less accuracy, 40 nppear to have described ellinses, 7 hymerbolas, and $1 \overline{0} 0$ orbits That camot be distinguisled from parabolas.

The discovery that comets are celestial homben, extraneons to war atmonhere, is che to Tyoln Brahe, who ascertainen the fact 1 or ohservations of the $C$. of $15 n 7$. Newtom snceeden in demonstrating that they are guiled in their mosements liy the same principle which controls the planets in their orlits: and Halley was the first, by determin. ing the prarabolic elements of a momber of ennets from the reended inservations, to inentify the 1. of lese with one which hat heon observen in 1607 anil the ubservations recordal by Kipher and Longmonontanus, and also with at and $^{\text {a }}$ oliserved it

1531 by Apian, at lugoldstalt, ane thens confidently to predict the return, at the end of 17 as on beginning
 clements. These praralic elcments are elements of a prabola nearly coincident with the elongated alip,tic orbit of the comet. They ar-1. The Inclination. 2. The longitude of the nould. These two determine the phane of the orbit. :3. The longitude of the perilition, or point of nearest approach to the sun. 4. The perihelion distance, or nearness of approach to the sun. 5. The drection of motion, whether divet or retrogmale.

To retermine these paralolic elements, three ohservations of the ( 1 . are sufficient ; and liy a table uf such dements deduced from the recorded obserrations, it is pussible at once to asccrtain whether any nuwly olserved 6 is identical with any that have been previously olserved. To predict, however, with iccuracy the time of the returus of a $C$, a much more acourate calculation must lee marde of the orbit, takine into account the perturbations of the phanets to whose influmee it is sulject. This nitheult problem was solvel, in the case of Halley's C.. hy the joint work of Lalam, Madame Lepante, and 'lairant, whor annuncel, in Novemher 15.5s, just as astrommers legan tu look out for the return of the ('., that it would take 618 days more to return to the prihelim than on the preceding revanthen. The furihelion passage was fixed alout the millu" of Aluril 1700 : lnt Clairant distinctly forewamed the worl that, lecing pressed for time. he had nuglecteal small values, which collectively might ammunt to alonat it month in the seventysin years. Tlle ( $\therefore$ passed the perihelion on the 10th March 17.50, cxactly a month liefore the time annonuced, but within the assigner limits of divergence from that late. The elements of its orlit proclaimed it to be the C of the formex periods by their similarity. For the next veribelion passage, the sliferent calcalations executend ly MIM. Damoisean and Je l'ontémlant. fixel the fth, the 7th, and the 13 th Nowember 18:5. Sulsequently, observiations indicated the loth-. that is to say, a deviation of only three hays from what turned out the must aceurate calculation, and a deviation of 1 is days from the most remote. We have alverted to the perihelion passages of this C. in 1531, 160\%, 1682, 1759, and 18:\% . It is also now illentilied with a ( C onserven in 14.ti, and one in 1358. recorded ly Chinese olservations. 'llere are no sufficiently roliable Luronean whervations previons to 1450 , lat it is conjectimed by Araso, that this $C$. is the same with the 6 of 1315 ; that of $1230 ;$ a C . mention 1 in low hy Hali lien linduan; that of 885 ; finally, al 1 . suen in the yar 52 lufure nar era.
'This acoont of llabley's $(\therefore$ las been given at

losuth. the ihn trathe the prineiples on which the caloulathons arre nabl". The annexed woodent rephemens some of the apparanees which that 1 : presented, in different parts of its orlit, on its last 148
 in wetrathe. 'There are the other emocts whose preorlinity is established, and whose faths aro aceurately known.

## comet.

1. That of Linke, with a shont prriox of 12nd
 of dupiter, and a slight acempation in itsprimpo times of return has sugensted the persibility of the space, within bur somar systen at least, Jofin: wepupind by a resistins mealiom, thoush of extreme rarity.
E. That of Binla or (iambart, havines a prome of six years and three-thaturs. Durinig the visat of this $1 \%$, in 1846, it was sech to sharate into two distinct comets, which knpt moving side by sile till they disapmareal. On the retnen of the, ' ( in
 mudoi had moch increased, and their divonement is nuw emsidured emmplete.

3 . That of laye, with a perion of seven years and a halli.

The onnits of looth these last extem bryom the ornit of Jupiter, lont not sof far as that of saturn.

The above are the only comets whose orlits arn considered by astronomers as established, althrmeh there are others whose orhits are ascertaned with a less degree of accuracy and certainty, requiring the test of future returns to fix their perionlicits: Sun other deserves mention from the great peculiantios of its course.

In the month of Jome 17:0, Messier discomered a C. which remamed risible a long time, and enabled Lexell to ascertain the orlit to be an ellipse whose major axis was only three times the diametir of the earth's orbit, and corresponded to a periodic revohtion of 5 ! years. This result suctested yrawe difficulties. It had been foum impossible to in entify this C . with any previously observed, and yet it was dithicult to eonceive that ia bright $(C$., with so short a perion of return, shonld have previonsly escaped observation. What was still more remarkalle, it was never seen again, thongh anxionsly looked for in the places where Lexell's orbit would have brought it. It lecame popularly callud Lexell's lost C., and gave vecasion to many sareasms by the wits of the day at the expense of astronomers, who had so much luasted of having found the key to the cometary movements, In the present day, the exphanation is complete. The C. was never seen betore 1770, because its orbit previously had heen totally diflerent, its nearest point to the sum having been as distant as the path of Jupiter. Its appearance tlat year arose ont of the fact, that in 1767 it was in such close contact with Jupiter, moving in the same direction, and nearly in the same phanc. that the attraction of this planet entirely changed its orbit. But why has the $C$, not since been seen? 1ts passage to the point of perihelion in 1776 took place by day; and in 1779, lefore anather retnrn, it again encountered the rast body of lupiter, ami sulfered a fresh orbital derangement, the attraction of the planet deflectines it into more distant regions, and so changing the form of the orbit, that if it had again ben visible, it wonl not have been recogniscel as identieal with Lexell's comet.

The celebratel 6 . of 1680 , which furmished Newton with the oceasion for proving that comets revolve around the sun in conic sections, and that, consequently, they are retained in their orbits by the same force as that which regulates the movements of the plancts, appears to have been about the most remarkable for brilliancy of any of which we have tuthentic accounts. This C. is supposed to lee identical with the one that appeared about the time of C"asar's death ( 41 b. © ), with that which was sem in the reign of Justinian in the year 581, amp with another in the year 1106, in the reinn of Honry 11., the perion of revolution, according to the orthit ealculated for it ly Whiston, being abont the years. There is, lwwever, some doubt among astronvemers
as tor the real form of its orbit, the ome assimen to it by limek givine it a primi of ssals years. Ihis (1. apporelnat arame the suns than any kmow,
 whose proholion distane from the paneity of

 diancter of the earthes orthe 'The anmexed diarman

shews a part of its $\mathrm{l}^{\text {nt }}$; the same diamran shews the direction of the tail. This is nearly always away from the son, frequently assuming a curved form. It increases in length with its proximity to the sum, but does not acquire its greatest lemgth till after passing the peribelion. These ary usual characteristics of comets, which were exemplified hy this onc in a remarkalle degree. These phenommar might be accounted $f$ or if we were to resarl the trinin as vamorisation proluced by the intense huat to which the booly of the C . is exposed in its approwh to the sum.

In the present century, the comets monst remarkalle for brilliancy have been the $C$. of 1811, that of 1543, and that of 1505 (1) onatis's).

It has been a subject of ruestion whether eomets are self-Iuminous, or merely rettect the light of the sun. The fact of their becomint invisible in recating from the sun, though still of eonsideralte apparent size, strongly leads to the admetion of the latter hyputhesis. Experiments were made ly Arago, which shewerl that the light from comets is lautially polarised, in the same way that the sun's light is retlectell hy fur own atmophere, which strongly eorrobrates the same belien.

Whiat the matter of the conets consists of is of course, only a sulbject for speculation. The composition of the moloulosity and the tail is, at all crents, somethins of almost inconceivable tenuity, as shewn by three considerations. 1. Stars secin through them suffer no diminution of loright. ness. though the light must have to traverse sometimes millions of miles of the cometary

## COMFREY-COMINES.

atmosphere. 2. Though the thickness of the tail of a C. may be millions of miles, and its lougth of course much greator, the comets have never hoen obserred to cause any sensible disturbance of the planetary motions, thongh approaching near enough to be themselves so much affected as to change the entire character of the orbit. 3. The curvature of the tails, and the acceleration of the periodic time, in the case of Encke's I', indicate their being affected by a resisting medinm, which has never been observed to have the slightest intuence on the planetary periouls, thongh so long observed. Even the nuclei of comets appear to be of extremely small density. This may lee inferred, though with less foree than regards the tails, from the two last considerations above mentioned; ant, moreover, there are reliable accomots of stars of a very low order of magnitnde being seen throngh the nuclei themselyus.

Comets have been alternately rogaded with terror and with welcome in the pupular mind. The appearance of Hiklley's C., in 1456. just as the Turks had become masters of Constantinojle, and threatened an alvance into Europe, was yegarded by Christendom with a superstitions dread, and to the Ave Daria was added the prayel': Lord save us from the devil, the Turk, anl the comet.' At Constantinople, the occurrence of a lnare eclipse at the same time, increased the portentonsuess of the event. The discoveries of science of the magnitule of the space filled by their bodies, and their protigions velocity, together with the confessed inspossibility of always predicting their apmoach. produced fears of another kind, which lave sumetimes been, especially in France, extraragantly exagecmated in the prubic mint. The frommllessness of such alarms, from the extreme improblabity of collision with the melens, the probalile iunocmonsuess of a contact
advertised as the $C$. wines. It is scarcely worth while, however, to follow further speculation on these subjects, and it has heen considered preferable to confine this artiele chiefly to the deseription of the general characteristics of comets, and the facts respecting them afforded by scicnce.

UO'MFREY (Symplytum), a genus of plants of the natural order Boraginece, distingnished by a 5 -cleft or 5 -partite calyx, and a corolla enlargel upwards, its throat closerl by awlshaped seales. The species, which are not numerons, are natives of Europe anul the worth of Asin. They are peromial plants of coarse "1pearance, although occasionally to be seen in Hower-borders. $S$. officinale (the ComMoN (.) and S. tuberosum are natives of Britain, frequent in shady and moist places. S. offinale was formerly much esteemed as a vulnerary, on account of its astringency.

Cimmon C'unfrey. Its young leaves and its blanched shoots are also occasionally used as boiled vegetables. The Prickly C. (S. asperrimum.), a native of Siberia, $6-10$ feet in height, has been highly recommended for feeding cattle.

COMINES, or COMYNES, Philippe de, Sieur d'Argenton, a Frenel statesman, and the author of some very interesting and valuable Memoirs, wns born at the castle of Comines, not far from lille, in 144. After receiving a careful education, he passed into the court of Burgnudy abent 1466, and attached himself particularly to Charles the Buld (then Comte de Charelais). In $14 \%$, C. who was anything lut punctilieus in his notions of bonour, cuteral the service of Lonis XI., the rival and enemy of Charles, who imnecliately coserenl him with hononrs, and made him one of his most confidential alvisers. He proved himself a very suitable agent for carrying out the Jesigns of the crafty monarcle ; but after the death of Loms, hy his adherence to the party of the Duke of Orluans, $O$. incurad the tispleasnre of the government of Anne of Beallen, and was sentened to a forfeiture of a fourtl of his estates and to ten

 1ones; and accordine to the mode of constitutint the C , the preponderawe lay wath the patricions or with the plebelans.

COMATY OF NATIONS-more frequently mentioned hy its Latin equivalent, comitns gentimm
-is that species of international legal courtesy hy which the laws and institutions of one country are recognised and given eflect to hy those of anothes. ' In the silence of any positive rule,' says Mr. Instice Stury, 'affrming, or denying, or restraining the opration of foreign laws, conrts of justice presume the tacit adoption of them ly their man govermment, unless they are repugnant to its jolicy or 1 rejulicial to its interests.' From the existence of sten a mumber of iudependent states on the contincut of Sirope, and of federated states in Anserica, the comilas gentium is more called into play in these countries than in our own, and it has consequently been more extensively discussed lyy their legal writers. See Story's Compliet of Laws. Sue Ivternatonal Law.

CO'MMA, in the mathematical stady of sound, is applied to two small intervals, which, hy comparison and ealeulation, arise as the difference hetweern the proportions of certain other intervals of the diatonic seale. The larger, hut seldomar oceuring ( . is ealled the 6 ditomicam, or the I'y thagmean 6 , being the difference between the true octave, whose ratio is $2: 1$, and the interval which arises when the octave is oldamed by tuning a progression of twelve perfect fifths, or arithmetially ly alling their values together; by which proeess it is fomm that the last sound is greater than the trme octave in the proportion of 581,41 to 5 2 4,299 . The smaller C., C. synforum, or C. of Didymus, is-First, the difference between the large whole tone, the ratio of which is $9: 8$, and the small whold tone $9: 10$, which is found in the compound of these ratios inoduced liy multiplying tngether respectively their antecedenta, 9 and 9 , and their consequents, 8 and 10 , to be $81: S 0$. Second, The difference between the great limma. $27: 25$, and the great half-tone, $15: 16$, which is found by the same process, and then reducing the resultine ratio to its least terms, to be also 81 : So. 'Third, The difference between the diesis, I2S: 120, and the diaschisma, $245: \geq 020$, which by the same process gires $81: 80$; and lastly, the difference between the small limma, 135: ] is, and the small half-tone, $24: 85$, which a main gives the proportions 81: 80. The difference lwtween the ('. ditonicum and the C.syntonum is exactly the schisme; therefore, the aggregate of the diaschisma and schisma, if they he added together, is nejther more nor less than the syntonic comma. This C., again added to the diaschisma, makes up the diesis, and added to the great half-tone, makes ny the great limma. It follows therefore that, practically, two enharmonic tones in perfect tune never differ by a syntomie $\mathbf{C}$., and it is wrong to say that $d$ flat is hugher than $c$ sharp by a 0 . While the real difference is that of a diesis, liss: 125. In the equal-tcmpered scale, these
viricties du mot exist. The term sympmic comes From the from, aml meas equal-sonnting.
(:0DIMANH.NNT, in Military matters, is a tompary commande, in pate of the real chice ; suche as ar captin-commindint, linatmant-commanlant, \&e. In formen immies, the itesimation is more frogumaty applind than in the liritich, "amecially to the eommandiva of gerisons.
 neve under a "aptain in rank, and server vither as

 whole list of thase cmphych, ar clighbe for amploynent, is to be reducel to 200 . 1lalf-pry raners fron 8s. bol. a day to ettoo a year. lectirment is optional at the age of 4 ; ant compmlsury at int, or at any carlice ise after 5 years without cmldoyment.
COMMANDER-IN.CHIEF is the himest staff alpmintment in the British army. It is helob lay the general commanding all the forces in lowlia, and would prokahly he givan to the lader of any larow army in the fichl, whether alrond or at homs. Formerly, the army at home was administeren hy an officer of this rank: lont since the death of the lonke of Wellinston in 1550 , the military almimistration has vested in an othicer holding no higher enmmission than that of "Hencral on the Stalf:" who is called the general (or fiedd-marshal, aceording to the hoder's amy rank) commanting in chinf. Since 1855 this ollicer hats buen strictly sulurdinater to the secretary , State for War. "Whe oflece of the

 departumento of the military secectary, the angutintgencral, and the guartermaster-semeral, with in ot all
 ley urders in conncil of that yar, tho witicer commandinf in chiof is one of the three great wothens who anminister the mlitary alfairs of the conntry under the Secretary of State for War: hisherartumit beins that of nilitary emmanal, disciplus., and 1romotime. In iractice, be makes all framentins and military apmintments; then $\mathrm{m}_{\mathrm{H}}$ ], in themy, these are all nambe rin the respmanility of the Secretary of state. Appointments tovery anpurtant positions on the staff womle not le male without the Snpervision of the minister and mahahle conemrene. of the cabinct. The efficer commanting in chat is responsible for all remitimp "ratims, and for the" apropriation of tremps to particular luealitios: lat
 than any immediate cammanl wer the men. The actual command vests in the -anemal oflicets commandines the districts intu which the kingrom is jarcelderl.

A merel C. is the clicief almaral at anys $l^{\text {nort }}$ or station.
Comimandite, Sochúté CN , of l'hitnersitip ra, an expression used for at least two centuries in France, to express a partnershij) in whieh one may alvance capital without taking charge of the lusiness, or may become a 'sleejing partner,' as it is called in this country. The term uwes its orinin to the old meaning in the edmmereial nomenclature of Frauce of the worl command. which was applicd to one person anthorismir another to transact business for him. The working partner had a commande from him who merely adranced capital. The term has aumbired ingurtance of late in political
economy, because the law of France conld exempt
the sleeping partuers from responsibility beyond the the sleeping lartuers from responsibility beyond the
amount they might agree to be responsible for. On the other ham, by the law of the United King. dona, down to the passing of the limited liability act. every partner of a company was liable for ail its deloty. Hence, in the discussions abont the question, whether it wouk be prolent ta relax this law, and permit persons to invest money in trading companies without undergoing this responsibility, such companies were called "partacrships in commaudite.'

COMAELYNACEA, a natural order of emion senons plants, cousisting of herraccous plants. with flat, narrow leares, usually sheathing at the lase. The calyx is : 8 -partite; the potals three, sometimes cohering at the base. The stamens are six. insertel mader the ovary, which is 3 -celled; the style is single. The fruit is a capsule, with $2-3$ cetls and $2-3$ valves, mostines thron oh the mithle of the valves. The sceds are often in pairs, inserted ly their whole side on the immer angle of the cell; the embryo lies in a cavity of the allumen. The orler contains more than 260 known srecies, natives chiefly of warm climates; but a few oecur in North America. None are Europuan. Tradescratin liryinich, or Spiter-wort, common in aur llower-garlens, is a familiar example of the order. Commelyma catestis is a fine ormanent of our llower-garidens. The treatment is somewhat like that of the dahlin.

Cominis NDAD. When a clerk is promoted to a hishoprie, all his other preferments beeome voil from the moment of consecration; but a method was devised hy which the substantial interest in the living was retained ly its being commended to the carc of a bishop (called the commentatory) by the crown, till a proper pastor should he provided for it. Such a livins was called an ectesio commendhta, and it was salil to be lich in commendam. The holding on this title might be yeally temporary for one, two or three rears, or it might he perpetual. By ${ }^{\circ}$ anil 7 Will. IV. c. 77, s. IS, it is provides that no ecelesiastical dignity, othee, or henefice shall be hell in ( 1 . by any lishop, miless he shall have held the same when the act passed. -Stephens, iii. 37.

COMMENDATORS, in Seotland, in Roman Catholic times, were stewards apointed to lery the fruits of a benefice during a vacancy. They were mere trustees; but gralmally tho pope assmmed the power of appointing (". for life, without any oldigation to accomat. "This was chielly intemel as a eloak for the plurality of beneficies, and to evade the canon of the second comencil of Nies, liy Which one benolice only was allowed to be given to one and the same churchman; but all commemators were ly our law prohibited, even huring purery, hy
 linshops for a term not exceerling six monthe. Siminn's Imwit, vol. i. 1, 98, Irory's elitim. See Alequt.

COMMINATION is from the Lat. comminor. to threaton, and is the name griven to a penitontial survere uscel in the mimitive charch. In the earliost :2/4.4, thone whon wore gaty of grievous and notorions sins wore put mat of the charch, notil, on thair rowntance, ani after long trial, they were restorma to full commomion. It sceme that, at least from
the heginning of the Stla c., there was an office of this kind for mblic penitents on the first day of Lent; but from various canses, the penitential disepline beeame extinct, both in the Eastern aul Western Churches, and the office for Ash- Wremesday (so called from the penitents coming clat in sackcloth and ashes) is the only memorial uf it left. The offiec, as used in the church of Englant, is noarly the same as those foum in the Salisbury and York missals. The curses coutainerl in Dent. xxvii. against impenitent simers are real, and the congreuation answer 'Amen' to every sentence, as acknowledginer the justice of the sentences. See Bingham's Autinuities.

COMM1SAARLAT is a name for the organiser system wherehy armies are provided with food, and daily necessaries other than those connected with actual warfare. Amones the ancients the Romans attended best to the U; the questors were the commissaries. In femtal times, the soldiers were mainly ilememient for foot on their lords; but they lived very much by phunder. During the wars of the Crusadea, the C . was so utterly neglected, that thousanls died of star vation.
In Enylani, the first ferm of the modern C. appeared in the office of proriant-master, in the time of Quecen Elizabeth. Under Charles I., commissaries were stational in the different counties. Under Marlborough's command, the troops were supplied ly contract; he received a percentare, and pecilation was very common. After many changes during the 18the c , a commissarygeneral was appointed in 1793, to superintend all contracts for food and forage. The dire experience of the Crimen war shewed how greatly reform was required in this impurtant department. In 1858 and 18.9, aceoringly, it was newly organised; and remaincel, matil ISO, a War-oflice department, under a commissary-general-in-chief. The other grades were-commissary-general, depaty commissary-general, assistant commissary-general, Iejurty-assistant commissary-gencral, acting deputyassistant commissury-gencral.

These successive grales were reached by promotiom. The dirst apointments were all for commissionet subolterns of the army. In matters of honour "r etiquette, a commissary-general ranked with a major-rencral in the any ; and the other affecers with virions grates down to that of lientenant. In 1500 , the Commissariat was merged with other sumply lepartments in the great "Control Deparment,' which, under the surveyor-general of the Ordnance, jerforms all the civil admimistrative duties of the army. 'lhe ranks of supply officers are commissary (ramking as major), deputy-commissary, assistant enmmissary, and sul-assistant commissary These officers are numer the orters of the control allicer of the district.
comalssider, in penmal, is any one to whm the fower and anthonty of another is committed. In this sanse it is nearly equivalent to commis. sioner. In ecelesiastical law, id U. is an officer appointed by a lishop to exureise jurisoliction in purts of the dincese which are so distant from the cpiseopal uity that the forple canmot be comveniently summonal to attend the pincipal court.

Whan the papal authority and all jurisaliction which thowed irom it, wats abmished in Scotlaned, by
 ratablished in bitindmagh, ly a grant of Queen Mary, dated lidmary \&, 1503. This court hat jurisfiction in antions of divore, declarators of marriage, nullty of matriare, and all netions which originally belonged to the liwhop's ecelesiastical conrts. Its puwers were gradually conjoined with

## COMDISSION-COMMITTEE.

those of the ('ourt of Sessiom, and it was fimatly abolished in 1836 ( 6 and 7 Will. N. ©. 41), the small remains of its once important jurisdiction being transferred to the sheriff of Edinhargh. Tho inferior commissariats, which had nsually heen

 loing erected into a seprarate commissuriat, of what the sheriff is commissary. "The jursuliction now Luft to the commissary-conrts in scotham,' says Mr Alexaneler, is dimited to decreeing amb erntirmine excentors to deceased lursons having Inrsomal prombrerty in Soutlant, and relative incidental mattors.' - Praftice of the Commissary Courts in stotlemd, 1s.s. In the dirst chapter of this worl, the reade will find a very interesting sketch of the history, constitntion, ami jurisdiction of these courts.

COMMI'SSION, a writing, generally in the form of a warrant or letter-patent ( $q . v$ ), authorising ome or more persons to perform enties or exercise powers helonging to another, or to others. Instruments of delegation, bearing this title, are issued hy the erown to officers in the army and navy, judges, justices of the peace, and others.

Another class of commissions are those granted sonctimes by the crown, and sometimes by parliament, to a ludy of persons, either to inquire into the condition of certain institutions or tranches of the pulbic service, or to exercise certain howers, or execute certain measures for their improvement. l'ersons holding such commissions, deriving no ather title from their appointment, are calleil commis sioners: e.g., the LInglish Ecclesiastical Commissioners, the Commissioners for the liclief of the Foor, the C'ommissioners for the Atfairs of Iutia, the Emigration Commissioners, \&c.

COMMISSION DEL CREDERÉ. Se DEL ('redere Commishon.

COMMISSION MERCIIANT, or AGENT, called also a broker, or factor, is a person employed to sell goods consigned ir delivered to him by another who is called his mincipal, for a certain percentage, commonly called his commission or factorage. As the grods thus reecived are saitel tu be consigned, the C. N. or agent is often called a consignee.
COMMISSION OF ASBEMBLY. See General Assembly.

COMMISSIONAIRES are a class of attendants at contimental hotels, who perform certain miscellimeous services. Employed to attend at the arrival of rablway-trains and steam-luats to secure customers, they wait to take charge of luggage, see it passed through the hands of the custom-bouse officers, and semt it on to the lootel; for all which service they charge a fee. They likewise procure visés to passports, and act as valets-de-place. In this last capreity, they may be hived for the day to conduct strangers to public phaces of interest, galleries of art, or other sights. In Paris, they are generally respectable and intelligent, and spati English with tolerable flueney. In the Freuch ontports, such as Fondogne, they can be referren to less favourably.-Lately, a holy of (C. has been estahbisherd in Lomdon, and also in Elinhargh, comsistug of maimed soldiers who lave retired with a pensiom, and are of unexceptionable character. $O_{1}$ a moderate taritl of clarges, they act as messeugers, light-porters, valets-de-place, and make themselves otherwise useful.

COMMI'sSIONER, in Scotch Dankrmptey. This office has little or no resemblance to that of the olicial in England bearing a similar title. In Scutland, three commissioners are appointed hy the
crelitars to alvise, and in cortain cases to sumerintend the trastes, who is the party chargeal with the realisation and distritation of the rstati. The come missinners andit tha trustee's anconuts, they fix has remmaration, and they haw to susertan that the moneys malle ter by him have bern daly lodened in hank. 'l'bey themselves are not antitlell to remanCations and they camat purdase any lortion of ther ostate. Their qualification is to line irealators,
 for the oflice of trustee also mutits tor this wifice
fommissionst, Amy are warants for soming the crown in certain military oflices. 'Tluse lumhlu! surl anthority are called commissiment offier os. Nincommissionet officers form a step intirnmaliato hotweon commissioned officers and privatu suldirts. First commissions in the probationary ramk of sulh. licatenant are granted by competitive examination open to cery Pritish subject of proper atre amd character. Sulsequent-i. e., higher-commissims are given, up to the rank of lientenant-culond, hy 'solection temperea by senionity.' 'l'he commissim of culonel is attained hy service only, and commis. sions as major-general, lientenant-general, amd general, follow by pure seniority. Those remarlis aply to cavalry and infontry only : commissions in the Artillery and Engineers are chatained-inst, by passing a severe course of stuly at 1 ombwich Acadomy, admission to which is ly open cumpotition; later commissions by seniority entirely. Before November 1, 1571, commissions in the eavalry and infantry were martly whatined ly purchase, nnder the system which is folly explained muler. I'enchasentistem. The prices of commissions ruse gradually from the time of Charles II. until the Liussian war of 1853 , when the regulution pricts were as follows:

| Rank |  | Repulation Prico ol Cammastous. | Infatan wallo lerwerns the in sutecestul. |
| :---: | :---: | :---: | :---: |
| Life Geards. |  |  |  |
| Iinutmant-colonel, | . | ET250 |  |
| Majer, . | . | 5350 | 21310 |
| Captaia, | . | - 2510 | 1501 |

## Lhige Itigimbite.

The combitions of fromution, and the operatime of the purchase system, will he considered under. Orfiches, Nindtais. In the nayy also, the chicef officers hoh their authority by cormission, See Uerichis, Natal.

## ('OMDI'TMENT. See Imprisominet.

COMAITTEL (l'r. comité), a partion, generally consisting of not less than three members, selected
from a more numerous body, to whom some special act to be performed, or investigation to be nade, is committri. But though a C. usually consists of several members of the body by which it is appointed, it may consist of one member, or, what is more frequent, of the whole members acting in a different capacity from that which usmally belongs to them. This latter form of C . is known in parliament as a C. of the whole House. In order to mark the distinction between the Honse itself and the same body when thus resolved into $C$, the speaker in the Commons, and the Chancellor in the Lords, as soon as the C. is formed, leave the chair, which is ocenpied by the Chairman of C., a rail oflicial, who is appinter at the commencement of every parlimment. In the Commons, moreoter, the mace, which usually lies on the table, is put wher it when the Honse coes into committee. Of committees of the whole House, the most familiar examples are Committees of Supply (!. y.) and uf Ways and Means (q. v.). The vote of a C . is of no force till it has been reported to and received by the IIonse. In the case of every publie bill, moreover, a C. of the whole FFonse is constitnted after the second, and before the third reading, in urder that the details of the measure may be more carefully adjosted. In private lills, analogous fnnetions are performed by select comnittees. Oceasiomal matters requimin special investigation are also remitted to select committees. "These, for the most $\mathrm{P}^{2 r} t$, conduct their investigations in public; but there are instances also in which the publie safety seems to require secrecy, in which they deliberate with elosed doors, and they are then called stecret Committces.

CO'MIODORE, in the Nays, is a rank intermediate fetween an auniral and a eaptain. It is not permanent, lut is bestowed for a time on a captain. Usually, ic Comnimus more ships than une, detachal from a tleet on somo spacial service: he looists at that tine a pemlant. If a $C$. of the first class, his problint is hroal and red, pointed at the onter cud; if of the sercond class, hhus. A (: is privileged to have a commomber und 1 lime in his ship, in the sane way as an arminal is privilemed to have a captain. 'Fhe C., in matters of etipuette. ranks on a level with a brigenliogegeneral in the arny. The pay of a ( varios from watl to xl 640 per annmm, when in command, in addition to $h_{\text {is }}$ bay as captain of the ship to which be helonges.
(O'HMODUS, Luerts Arembies, is lioman ewneror, horn 161 A. D., was the som of Darens Aurelins Antoninns. Great pains was takn with his education. Ent the solicitule of his fatlaer was all to no purpose. (. only waited for an "lportunity to coxlibit as startling amd detestable is mixture of sensuality, cruelty, and meanuess ats hat ever been wituessed in Home. When he was shmmoned to the throne on his fallore's decerbs. 17.th Mareh 1S0, he manifested a shamofnl emereness to phunge into the lissipations of liome it that pronl how wis successfally furhtine the daresmamai and bthey tribes on the Liper Danalue, amb, not to be halked of his anticipated pleasures, he hisstily concluded a traty with the burbarians, ant roblelal the rapital in the levgining of the autuma. 'IMa crmelty to which ha was always prone, was capnecially rallad into action aiter a conspiraley ly his sistor lourilla maninat his life haul hen diseovered in the your 183. Nearly all who, hy virtue, ability, and loatnine liaud risen to homons durimeg lis father's Ifiothm", wirn sacrified to aprease lis sivage j"alonly of the: gome wml the great. (iross proli. Fithty in tha" axpumbiture of the resources of the state on the ammements of the amphitheatre also markng his beign. He was prout of his own
physical strength, and exhibited it in gladiatorial combats. For each of these exhibitions, he charged the state an enorurous sum. He used also to sing, dance, play, act the buffoon, the pedlar, or the horse-dealer, and engage in all the filthy and horrible orgies of Eyyptian sacritice. A glutton, a drbancher, who wallowed in the most sensual abominations, he yet demanded to be worshipped as a god, and assumed the title of lIercules Romanus. Many plots were devised against the lifo of this mingled monster and madman. Happily, lrovidence at last permitted one to lee successfud. His mistress, Marcia, in concert with the prefeet Lactus, and the imperial chamberlain Eclectus, after an attempt to pison him had failed, caused him to be stranded by Nareissus, a famons athlete, Vecember 31, 192.

CO'MNON, in Law. This is one of the numerous instances in which a different meaming is attacherl $t_{0}$ the same term in the leral systems of England and Scotland. In Ensland, a C., as defined by Elackstone, is 'a profit which a man hath in the land of another, as to feed his beasts, to eatch fish, to dig turf, to cut wood, or the like.' In Scotland, acain, where the law has adopted the divisions, and followed the nomenclature of the civil law, and of the legal systems of continental Europe, all these profits, or rights to derive profit, are known as servitudes (g. v.), whereas a (., or Commonty, as it is more frequently called, is a common right of property existing in several individuals, frequently the inliabitants of a whole village, in a picee of sound. In each individual, the right of course is limited, so is in reality to amount to little more than a servitude; but tliere is no over-lord, the lind is not the land of another, but the land of the community as a body.

The division of C . lanus, or those over which C . is elamed, among the partics possessed of such rights, (1) the permission to the nwwer to enclose the lands on making compensation to the owners of C. rigints, has been the subject of regulation by a very great number of statntes. Dany of these are private aets, lout the 6 mud 7 Will. 15. c. 115 dad down general rules for eflecting the purpose in future, without the necessity of ohtaining an act of parliment, where the consent of two-thirds of the parties interested conld he botained, and the $($. to be enclosed lay more than ten miles from London, and a specified distance from any othor large town. By a subsequent statnte (S and !) Vict. c. 11S, amended by sceveral later acts), a Roaril of Commissioners (see Eschostre (Ummisioners) is appointed to inguire intir the propricty of any proposed enclosure or partition, and to report to parliament, which then may puss a pablie ate muthorising the proceedings. This is the comse sencrally arlupted.

In Sootlinm, commonties or commons were made divisible by an wotion in the Comert of Session, at the instance of any having interest, by the stat. 16!.5, c. 3 s.

On the subject of enclosing commons, Mr J. S. Nill (D)warhetions and Dischasions, vol. ii. p. 2lia) "xpresses the following decided opinion: "We must meels think, also, that there is something ant of joint. when so much is salid of the value of redinme end hamanising tastes to the labouringbuple when it is propusid! to plant parks and lity wht gardens for them, that they may enjoy more frecly numbe's cift alike to rich athd poor, of sum, sky, ind requtation : and alone with this a comente. porress is constantly ant enclosing commons. Is not this mother case of givins with one hand aml taking lack more largely witl the othor? We lonk with the ntmast jealonsy upon any furtiner enclusure of commons. In the
greater part of this island, exchusive en the monntain and mumr alistricts, there eertainly is mot mone land remaining in a state of matmal widnuess than is desimable. Those who would make linglame resemble many parts of the continent, where wory foot af soil is hemmed in ly fenees and ensured over with the traces of human lithour, shomh remenolnel that where this is dome, it is loms for the use am? benetit, not of the rich, lat of the from ; and that in the countries where there remun no commons, the rinh have $n o$ parks. The onmmon is the peasintis pirk.
 prodnce, ibplies it fortion to the park, which is ynuerally fill' more fertile. 'The cllect of citure, When slons in the manner proposed, is mly tor make the pore more numerous, not better ofl. Fint what ought to le said when, as so often hapmens, the common is taken from the poor, that the whole or great part of it may be anlleat to the encloserl pleasure-domain of the rich? Is the miserable enmprensation, and though miserable not always granted, of a small scrap of the land to cach of the cottarers who had a goose on the common, any equivalent to the poor generally, to the lovers of nature, or to future generations, for this legalised spuliation?'

COMMON, TENANCY IN. This is an Estate (q.v.) or a right in property accruing to two or anore persons; and the nature of it is, that each hass a distinct right to his own share, althengh no division has yet been made. But the common wwners mily agree to a partition, or one of them may, me equity, compel a partition. If the estate is one which passes by inheritance, the heir of each owner takes his share, and there is no benefit of sumivorship. A tenaney in C. may be created either ly a converyance in express words, or by the parties obtaining their titles at different times, or at the same time from different parties. Lut if the title acenes ly descent from the same ancestor, even though it differcut times, it is a tenancy in Coparcenmy (q. v.).

COMMON BENCH. See Benct and Cumbon Law, Coun'ss or.

## CONIION CHORD. See Chord.

COMMION COUNTS. Short formal statements of the eanse of action made in a Deelaration (q. $\%$ ).

CONLMON DEBTOL. See DEBTOR.
COMMON FORMS. Formal phrases, often of sreat length and jrolixity, used in deeds in Englamk. It has been attempted to sulbstitute, for some of these, short expressions conveying all the meaming of the C. F.; hat the statutes hy which the attemut was made (S and 9 Yict. c. 119 and c. lot), leing permissive merely, have never been indopted in practice. A main reason for the preservation of (\%. F. lies in the general rule that comvejancers are paid not according to value, or the dilficulty of their task, but according to the length of a deed. A statute of last session ( 23 and 24 Vict. c. 145) made a further effort to abolish the C. F. used in arpuinting trustees, \&e., by giving to them the powers which were formorly contained in the common ferms.

## COMMON GOOD. See Corporation.

COMMON HOUSE, or COMIION LOOM, was an apartment in a monastery in which a fire was eomstantly kept burning for the use of the monks, Who frequently were allowed no fire anywhere else. The d. IL. was presided over hy a monk, who was called the master. It was the Irototype of the conmon rooms in the colleges and halls of the Lnolish miversities.

COMMON LAW, in England. These words, in their jroper sense, signify the aneient consuttudmary law of lingland. The U. L. is therefore
distimonisherl fram the statute law ami from "ynity.
 it stames to thase two censistont ernies. It is wholly wormber ly the statate liaw, wherever that law stands in rpmosition tu it. lont it manatans its forer in spite of :ayy lisemplant rulas on copaty, which can thereforeonly take ofliset thronthementervention of a contrt ly which the 1 , $\mathrm{l}_{\mathrm{s}}$. is in any fartioular case pheed in temporary abwonce. forr the eases in which this gesult is pissible, soe liun my.
 Its males have luen hamperd duwn by tradition, sonmtimes in a complete ank delinite shatpe, sbeh as the law of prammeniture, tha jurisliction uf the conorts, de: somotimes as a more spirit or tombency, actomalim to which, in novel cises, as they way arise, the law is to be expromment. Thas, the law. merelant is chiefly part of the ('. L., althumh mily soume of its rules are of real antinnity, and the granter purtion of them were estialished mu later. than the last century. Therefore, in such casco the 1. 1.., thumgh accomited trantitional, is, in fact, made by tha julges who declare it, who ensomeq new males suitent to new combinations of circumstances, aml merely bearing an analogy to what the ancient (1. L. has estahlisherl in cases whiel fell within its Purview: It is therefore not wantortal that theres shombl frequently be dispute as to what the ${ }^{\prime}$. L is, anll that hiflerent courts shoukl vecasionally give different decisions upon such questions.

As the C. L. Las never lreen fomally (nareted, nor has yot heen reduced to a rembar come, it is to be sought for in the treatises of institutimal witers, and in the ducisions of the conrts of law' 'These? last ane of the highest authority, ami where they are consistent, they are taken as irrevocally establishiurs the law. But being declaratory morely, amd not imprative, a single judgment of a enurt is not held emalusive upon eounts of equal jursdiction, thomglit is commonly aecepted as liminis ly inferior conirts. it cont anay even depart from its own decisiom, if it shall cume to be of (1) imon that the law has before been incorrectly statel. Put this principle perhaps madergoes an exception in the House of Lords, which bemg the highest comrt of all, it is laid down ly some of the law juers that its judgments have the force of statnte, ind that the rules it has unce sanctioned ean be alternd unly ly statnte. The point, howefer, camme get he regarded as settled.
'lhe C. Lo is apmlicable to the whole 1 walm. but it is part of its primeples, that in partionlar circumstances it may recognise rules which are not of minversal application; thus, in certain courts, it allopts as its own the provisions of coldes which it cutirely rejects in other conts. The civil and canun law are in some of their rules recomberd as part of the $\therefore$ L. in the Maritime aml Ecclesiastical (omuts (inelnding moler the latter denominatinn the now conts of Probate and limone), hut they are of 810 anthority whatever in the courts by which the main lranches of the ( ${ }^{\prime}$. L. are admimisterel?. Sis also, in praticular hocalitios, customs exist which the C. L. sanctions, althonerh they may lre at variance with its gencral prorisions. such are the rules reamiling suecession which prevail in kent under the mane of (ravelkink (q. \%). amd in certain towns umtur the name of Dorourrit English (1. ro). lint custons of much more circumscribed oferiation are when furored, equally accepted ly the (1. 1. as part uf itself within the limits in which it prevails: for the (. L. being itself the cmboriment of custom, cannot reject custem merely lecause it is lneal, if it be not otherwise contrary to its spurit. In orler to entitle a custom to tho foree of law, it must he of such endurance

## COMMON LAW.

'whereof the memory of man runneth not to the contrary.' The perion thus indicated is more precisely lefinen as extemting the commencement of the reign of lachard 1. Jiy this is meant, however, not that the cuntum must he proved to have been in perpetual vigom since that remote "puch, hat that proof of its non-existence within that periond will invalidate it. If me such proof is adduced, the custom will be established by the evidence of experienced livins witnesses. or he such dummentary evilence as the nature of the case may rember a vailable.

When at the present day C. L. is spokno of in distinction to erguity, it indmbes not merely the traditional law, but such statutory law as liears upon subjects falling within the domain of common law. Of late years. it has in this way been greatly extended, many statntes having conifured on the comets of C . L . a variety of powers which till then were available only to the sutur in equity.

COMAON LAW, Couters of. These are generally divided int, Superior and laterior. The superior sit at Westminstr, and hence are oiten callen the Courts at Westminster; They consist primarily in the Court of Quecu's Bench, the Court of Common I'leas or of Conmon Bench, and the court of Exchequer. These are all attshonts of the great court, the cula regice of the early Norman kings, which, umber the presidency of the chief-justiciar, and composed of the great officers of static and of tho louscholl, of the princimal moblity, and of the justices learned in the law, attendeit the king's berson wheruer he went, and furmed the sole sunurior court of the kingdom. Fit the inconvenience attending so transitory a judieature led to the demand, concedel in Magna Charta, c. 12, that communiu thecite, common jleas, shonld he held in a fixch flace, and hence arose the establishment of the court of that name. Afterwards, nomior Elward I., the office of chicf-justiciar was abulishen, and the julicial functions of the aulat regia partitioned amone the Come of chancery and the three courts of C.I. above named. Uriginally, the jurisdiction of each of these was exclusive: the court of Queen's bench bine chictly devoted to questions bearing umon the puldic pace: the Curt of Common I'leas to questions rolatine to real estate; nnul the Court of Excheruer to matters relating tos the revenue and the royal properts. Lat ly a gradual system of encroachments, finumded upon legal fictions, the barricrs between their jurishictions were broken down, and now by statute each court naty entertain actions fumbled on C. L. rights of every description, the sulection resting on the "ption of the plaintill. In certain matters, not in the mature of actions, there still, howewe, remains a division of anthority. These will he bivity indi. cater under the heai of ach comrt.

1. Cmort of पumats Bench.-This court is compensent of a chief-justice; whe is entitled to the stylu of Thief-justice of Linglam, and four paism" juiges or justiens Its prentiar powers comstast chiefty in tha exercise of supervision over the procectings of inferme courts aml maristrates, the the aftert of restraining them from exmeling thair jurisdietion, or of compentine than to proform their chaty, and in the comtral of corrurations in the went of allagal pocemim:
 jurvaliaturn user real actions su bug as they "xintod, hat as they haw mow ben abotislat in facme of simplare forns which are Mhally availalle in tile wher eomets, it now has faw jeconlar lownrs. I rmant of its mimal anthority is reservelth it in tharetriction of the actions which com in lion of the ohe writs of dower to this
court ( 23 and 24 Vict. c. $126,9.26$ ), and in the rule that certain deeds affecting land must be registered in the Court of Common l'leas. This court is also hy statute the court of appeal from the decisions of the revising barristers (1. v.). It is presildad orer by a clnef-justice, styled 'of the 'ommon I'leas,' and consists bestes of four puisne justices.
B. E.chequer.-This court still retains exclusive anthority in all matters relating to the revenue. It was at noe time a court of equity, as well as of common law, but the equity branch (which was always distinct) was abolished by 5 Vict. c. $\bar{z}$. It is composed of a chief-baron and four puisne barons.
The chiefs of these courts are appointad by the ministry; the puisne judges, by the Lord Chancellor. The salary of the Chief-justice of the Queen's Bench in isoolo ; that of the Chief-justice of the Common Pleas, im! the Chief-baron of the Exphequer, dotoro; and that of the puisne judges,

Sulordinate to these is a court called the Bail Court (q. V )

From the decision of either of the thrce superior courts in civil actions, an ajpeal, or, as it is termed at common law, proceedings by writ of error, hes to a court strlud the Exchequer Chamber. This was estrblished by $1!$ Geo. $1 \mathrm{~V}^{\text {. }}$ and 1 Will . IV. e. 70 , and consists of the judges of the two conrts other than that whose julgnent is under review; and from the decision of this court 'error' lies to the House of Lords (q. v.).

The sittings of the three superior courts are hell onty during Tern (q.v.), when they are said to sit in benc, am when they decide on all questions of law that may arise in the actions brought before them. Fut questions of fact, unless both parties consent to lease them to the decision of the court ( 17 and 18 Vict. c. 125, s. 1), are decided by a jury, and the comrts in which they are tried are held out of term-time, before one or two judses only, not necessarily of the comrt to which the action lelongs. These trials take place cither on Cirenit ( 1 - v.), or at the Lomen ani Westminster sittings, which are heli after every torm, am in either case are called trials at misi prius. The vertict is returned to the comrt to which the action belongs, by which it is disposet of aecording to law.

The anthority of the superior courts of $C . L$. extenls over thic whole of Endand, and over common law rirlats of every description. But since the remolelling of the comuty courts, it has been chactel liy seceral statutes, with a view to disennrage resent to such high judicatures in trifling cases, that in some species of actions in which less than eoo, and in other species in which less than $t^{5}$ shall be recoserch, in the superior courts, no consts shall be alluwed the plaintiff, maless the jurge who tries the calse shall cortify that there was sumiliciment reason for its lowing bronght in the superior courts.
Tho inforior courts are restricted buth in respect of place amd mather. They are extremely mumeruns. fow that rese existed having heen formally ahmishon: hat the are mow, with fow exceptionsthe principal of which is the mondern comenty comrt (f. ©.) matter of interest to the anticuary rather than wither to the practical lawyer or the pablic. They maly therefore be passod orer with very hrict explanation.
The Comer IBrom was a conrt conposed of the tmanta of "ach lonit of a manir. It might decide on :lll real actions (now abotishod) arismer within the mann, and on fursmal actions lelow the valuo of los., lat subinect to review lyy the court it Westminster. ha a mawo comprising Copyholds
$13 ;$
(q. v.), it is still of importames. Tho Munfored Court was a similar court, compensel of the: frow boblers within the Hamper (fo. w.), atul had lik.
 Poudre, or dusty font, was held by the stoware of a manor to which a market lownes, for the focision of all questions of harganing at the: markeq. Tha. Forest Coberts, of severall dasses, wate fin tha freservation of the jowasts of the chass, and the: protection of the suligect from nopmsision by tha oflicers of the forest. The founts af limpost in broughs wore for the recosery of small delite, lant are now :luplishard.
The Braroufle ('outs still exist, and are hed
 them a writ of ceror lies to the spmaner courts. The
 the wity if Lombon, have a consilerable anomat of hasiness. Tha Corert of ILastimes in Lomdon is bractically obsolete. The (ount of the 'iarme Forts is held lefore the mayn and jurats of each port, from which error lies to the Lom Warden of the Cingue Ports Court at Nhenway, and thence to the Queen's Bench. The silunnary Comens in Cornwall and Devonshire are also still in ase, and exclute, as to the tin-workers, the juristiction of all other comets, excent in pleas of lam, life, ow member. They are hed before the vide warden of the stamaries, and appeal lies moly the warden, assisted by two of the judres; and from him to the fudicial committee of the lriwy ('manil ( 1 s and 19 Vict. c. 32). There are in these comaties alse Bormote rouste, for reculating ynestions relatines to the mines ( 14 and 15 Vict. e. 94 ). The cimarts of the Chancellors of the universitios of Oxford amd Combridge have also exclusive jurisdiction (exeept as regards frechones), where the defembant is resident in the town, and a scholar on privileged member of the university is a party:

The court of Common l'leas in Lancaster, and the Court of Pleas in Durhan, have jurisdiction in all personal actions, and error lies from then to the Court of Quecn's Bench.

COMMON LAW BASt, that pertion of the linglish har which devotes itself to practise in the common law comrte, distinguished from the "quity lar, which practises only in the: ("ourts of ("haneery".

COMMON PRAYER-JOOK. This bonk comtains the forms of public worship and ammistration of the sacraments and other rites and ceremonies accom ling to the use of the Jnited church of Sinsland and Irelami. It is, for the must part, a translation of such portions of the servios of the anciont Catholic Chured as were considered he the leedemers free from all objection. Dafore the liefomation, the liturgy was in latin, and the form gemerally admond in the sonth of England was that alter the use of salisbury. The first steps towards its refomation were taken ly Henry VIII., the main objects in view beinu the aholition of what was superstitions, and the translation of the servie's into the sulgar tongue. la the yeur Ioto, a committe of hishops and clivines was apronted for the phrnose, aml what was done loy them was revised ley comweation in 1543. In ther year 1545, the Kinis Primer came forth, contaning, amongst other things, the lomi's Trayer, 'reed, 'len Commanhments, "Yenite,' • Te Deum,' Litay, and uther hymens imd colleets in English, several of wheh were in the same version as at fresent used. It was, however, in the reign of Lhlward VII. that the most important

 laman ('athodie ('ham, an act of parlament was pasand, orkerine the commanime to lor inhministeral tu tha laity in hotlo kmis, ami a furmalary was
 if the Latin mas. In the following yotar, a come
 not maly for sumblas and holatays, lont for the
 matrinmeny, the harial of the dual, and ather weat
 the conmmanon considerably alterad. This bund Was compuled hy ('ramber and lislley assisted by anen other divinea; at was rovisel by combeation, and montimed ly king and parlianmot, and pul, lished in lote, and is known as the busp l'babmo raok of Elward V1. It differed from the on" naw in use hy begiming the daily servire with the Lorl's l'rayer, ly retaining prayers for the dow, amb diveting the use of the sign of the cross in centirmation and visitation services, and the amontins of the sick. It was drawn up with prat pmuloned retaming as mom, aml alteroy as hittle as pussimate of what had lecen familiar to the perple. In line the ortination service was alded, takn principally from that used hy the Loman ('atherlic Churdh, lat monitting certan cormomis, and adhing mont of the ruestions formusal to the camdidates. Thas scrvier differer hat little from that now in use, as authmised in 160 .

In labl, whections, as mipht ha ancerad. were
 and (rammer pronseal thersise it, ant called to his assistance two distinguished forcign refomursMartin lineer, and Poter Martyr. La this revision, some of the princinal altarations were the adition of the ofreane sentences, the exhortation, contersion, and aloselation at tha begiming of the service, the disnse of oil in baptism, of unction of the sick, and of payers for the want. "The hook thens altered was contimen ly act of parlianent in lose, amb

lat the reign of Quen Mary, the acts uf 1519 and 152 were repealah, and therefore at the arese sion of Elizaheth, it was necessary tor ruvie this rpheal ; and this alfomed a fresh opportmaty of revisiug the whole. The Incstion then arose ( 1500 ) as to which of kins Elward's two bows shmat le inhuted. "lhw queen herself womb prowaly have prefered the first, as containing many of the wal cermonies to which she was attachen, hat the secmel was chosen, and a few mimportant changes introluced. This may be called the Tand 'omsmon Jrayelabong. No alteration wat male by it as to the use of chareh moments and restments,
 Lo ber retainel as they were left lay the anthority of barliament in the secmal year of Elward VI.

Un the accession of James I.. after the Hampion Conet Conference, the lonk was azain rerised; and a few judicions chantes mate. e. E. some forms if thanksgivin were mbenl for spectal weasions, and the explamation of the sacranents by lor Overall after the catechisth: midwives and hamen were also prohibited from baytisiner. ln this statu, the $C \cdot l^{\circ}$. was left mitn the liostoratim, when, at the regnest of the Ireshaterians, the king comsented to a fresh
 confur with an equal number of l'reshyterian divines, cach side having nim. conljutors. They were to consider the prineipal objections raised ayainst the lituray as it then stool. This was called the Siaroy Gonference. The lresbyterians brought furway all the oljecetions that had been made by the l'uritans for the last century, adting new ones of
their own. Baxter went so far as to say that it was incapable uf amendment, and was hold enough to offer an entively new liturgy of his own composition to lee received in the phace of the anthorised ome. It is bardly necessary to ard, that the conference broke up without anything being done, except that the lishops proposeil a few alterations, whinh were adopted by convocation in 1669 ani combirmed by act of parliament. Among these Changes, the new authorises version of the Scriptures was adopted, except in the Psalns (which follow the version of Coverdale's Fible, and han lecome familiar to the people), and in the commant. ments and the sentences at the commmion service; the general thanksgiving was added, and the form of prayer to be used at sea. It is proper to observe that the four forms of prayer knomin as the Stute Services-viz, for Gmpowiler Treason, on November 5; for Kins Charles's Martyclom, January 30 ; for the Restoration, Mlay 29; and the King's Accession; were never properly a part of the (. P., hut have been annexcel to it by order of the king in council at the beginnin; of every reign. Upon an alluress of Joth Honses of Parlianent, an orler in council was given by Queen Tictoria for discontinuing the first three. There have been foru acts of mi-formity-viz., in 154s and 155\%, buth of which wore repuled hy that of Elizabeth in 1559 ; and the last in the 14 th year of Charles II., 1662 , which left that of Elizabeth narepeale L. In the Great Rebellion, 1613, the Long larlianent probinted the use of the common prayer-book. At the Fevolution in 1688 . no change was introduced into the $f^{\text {rayer-book; }}$ for although a conmmission was appointed for the purpose, the secoml downfall of Episcopacy in Sutland in 10s\% consed sneh alarm in the English Churel that it was thought warivisable to press further changes.

Coneerning the use of the English C. P. in Ireland, it is suficient to say that, in 1.nis, the first prayerbook of Etwaral was introlnced by the king's anthority after sume nposition. In 1560, an Irish act of uniformity, copled from the English one, was passed, enjoining the use of the revised look; and again in 1662, the English revisell liturgy was alnonted by the lrish convocation, and four years later, the trish act of uniformity was passeli. In Sootland, which haxl as yet no settled liturgy, Land attempted to introluce the English praym book, but with alterations in the communion serriee which warc hikely to he very uffensive to a prople so hostile to the Churd of Finme. This attempt was followed ly riots, and ultimately leal to the alolition of the Reotch Episcomate and to the Sulemn League and Covenant. 'The Enqlish C. I'. is now used in most of the Eipiscopal chmehes in Beotland, hut in some the ohl liturgy is nsen in the commmion sorvice. In the Tuitem sitates, also, the English C: $P$. is used with some slight changes.

COMMON SBESE, THE Philosophy of, The full explamation of this phrase would imply an aceount of the leadins problems of metaphysical phansphy. There are certain beliefs that haw leen conrent aumg men in all ages, which, whon "anvassud by one set of philosophers, have buen dewherel to bey grommers illasions. Of these, the most mamakalif instance is the belief in an exturmal, material wowh, indegmont of any mind to
 lumblex, as opprisel to the common opinion, was, What 'the whole miverse subsists, and can only sul, iset, within sunh : sontient, invisihle, and conbumber thime as the mind is known to he. In this way., wh human mind must have within it a spparate matione of its wwa, hat su exatly the same in alt mimls, that "why ulicet of sense, abul every
morement of every object that is to be found in the universe of ane mind, is to be fonnd also in the universe that is within the other mind ; the general effect of all which conditions is much the same as that which would be produced if several reople were all dreaming, exactly at the same time, exactly the same dream.' "The result of Berkeley's incuiry,' says Dr Reid, 'was a serious conviction that there is no such thing as a material worldnothing in nature luat spirits and ileas; and that the belief of material substances, and of abstract ideas, are the chief canses of all our errors in philosophy, anl of all infidelity and heresy in relicion. His arguments are founded upon the minciples which were formerly laid down by Des Cartes, Malehranche, and Locke, and which have been very generally receiver. And the opiniou of the ablest juriges seems to he, that they neither have heen nor can be confutal; and that he hath proved, hy unanswerable argments, what no man in his senses ean lolieve. Hume proceads upon the same prineiples, lint carries them to their full length; and as the hishop undid the whole material world, this author, upn the same grounds, undoes the world of spirits, and leaves nothing in nature but itleas ant impressions, withont any subject on which they may be impressed. - Inquiry into the Human Mind, c. 1, s. 5.

A dead-lock in philosophy was the result of those doctrines of Berkeley and Ilume; and the solution offered ly Reid consisted in setting up C. S. as an arbiter from which there could be no appeal; that is to say, the universally admitted impressions of mankind were to be taken as corresponding to the fact of things without any further scrutiny. Reid's philosophy of C. S. has thus found a place in the thinking-world; and it is only the same view otherwise expressed, when it is declared by other philosophers that the deliverance of consciousness must he presume] true, Sir W. Hamilton, in the most elaborate vindication of the C.S. philosophy that has ever been produced (ctlition of Reid's works), Jwells largely upon this last view of the subject. The following extract is a specimen of his mode of rensoning: 'When, for example, consciousness assures us that, in perception, we are immediately comuizant of an external and extended non-ego (notseff) ; or that, in remembrance, throngh the imagination, of which we are immediately cognizant, we (latain a mediate knowlage of a real past: how shall we repel the douht-in the former casc, that what is given as the extended reality itself is not merely a representation of matter by mind; in the latter, that what is given as a mediate knowledge of the past, is not a mere Iresent phantasm, containing an ilhasive referenco to a real prast? We can do this only in one way. 'The legitimacy of such gratuitons doubt necossarily surposes that the deliverance of conseionsmess is not to be presumed true. If, therefore, it can he shewn, on the one land, that the reliverances of conscionsuess must philosophically lue acespend until their certain or probable falsehood has becon jusitively evinced ; ami if, on the other hame, it cannot ioe shewn that any attempt to hisuredit the veracity of consciousness has ever yet sucecedel ; it follows that, as philosophy now stimds, the testimony of emsmimaness must be viowed as high ahove suspicion, and its decharations rentited to dxand prompt and unconditional assent.

Th the first place it camot tme be acknowledged that the varacity of consciomsurss must at least, in the lirst instaner, he romedel. Nature is not gratuitombly to bur assumed to work, not only in ram, but in comat matetion of herself." 'Bat in the sucomel phace, though the veracity of the primary
convictions of consciousuess must, in the outset, he admittel, it still remains competent tol leak a proof that they are undeserving of redit. liat low is this to lu done? As the ultimat "gromals of kinn ledge, these convictions canmot be ralarinul from amy higher knowledge ; and as orisinal lomiefs, thoy are pramount in curtanty to every 1]erivation assurauce.' 'It will argut mothing ibrainst the trustworthiness of conscousness, that all or ary of its deliverances are imexplicalle-are inembpretrone sible. "Fon make the comprehensibility of at chanm of conseionsuess the criterion of its truth, would lxe indnerl the climax of absumbity, ( P .74 F .)
'The emelusiveness of this reasoning is cisputed by many, who ohjuct, that conscionsness (f.v.) is a vary whde word, comprising indeed everythiner that we call mind; amd it is proverlially unsafe to argue in generalities. Suppose, it is aratell, we were to sulostitute 'memory' in the aluve reasminims, and to maintain that the veracity of each one's memory was beyond all question or dispute, it would be apparent at once how the ease really stands. In one meaming, and in one stet of cireumstances, memory is sure, or even, if we please, infallible-that is, when we record an observation the moment after we have male it. For a short interval of time, a simple fact, or a brief statement, may he recollected with entire certanty. On the other hand, the lapse of days, months, or years, and the complicacy of the faet, not to mention the bias of the feelings, are known to eause great nneertainty in our recollection, and in such cireumstances we do not implicitly rely on it. In a word, experience is the eriterion of loow far the memory is to be trusted. Possibly, therefore, the same thing may turn out to be true of the larger fact named consciousness.

The truths of $\mathbb{C}$. S., or conscionsness, are such as these: the laws of Identity, Contradiction, and Exeluded Midtle (see IDENTity) ; the axioms of Mathematies; the law of Causality (see Cinse) ; the doctrine of an innate moral sense (see Etuics) ; the doctrine of man's Moral Liberty (sete Free WILL) ; the existence of an external world inde. pemdent of every percipient mind. Sueh truths are designated by a variety of other names, with a view to contrast them with what we learn in the course of our elneation and contact with the world ; they are termed Intuitions, Intuitive Cognitions, Instinets, Feelings, Beliefs, Prineiples, Ultimate or Primortial Elements, Truths a priori, Transcendental Cornitions, Truths of the Feason, \&e.-Hamiltou's Dissertutions, note A. The philosophy of C. S., as promulgated by heid, bore reference expecially to the denial by Berkeley of the received view of the material world-a subject which falls to lne considered under Percepfion.

COMMON TIME, in Music, is that species of measure which contains two minims or two crotchets in a bar. It is marked this:

COMMONS, the dimner provided in English colleges and inns of cout for their members. In the inns of court, it is provided only duriner term. Separate tahles are appointed for the lienchers (ly. v.), for the harristers, and for the students and other members of the inn.

## COMILONS, Hoyse of. See Earliment.

COMIMU'NION signifies, in ecclesiastical language, that relation, involving mutnal elaims and duties, in which those stand who are unted by uniformity of bohef in one religious body or chureh. To exelude from this relation and its involved
rights is to mommmmionte. 'The most visilla. symbal of this relation being the partakiug tomether of the Lari's Suprer, that rite is oftell called than

 of the arrangennents ly whinh pretain opronlators have proposed to diepunse with thase latw of senial and peltical reomony whirla are sulpusal to krop sumbety tomether, throush the inhlume of the dommotie affertions and the spirit of compotition, and tor sulastitute in thrir steaul a set uf artiticial rukes for the goverument of mankimul. The wonl Aumialist has arnerally lume appliad to those who only morluse to interfore with labour by abolishong mompu. tition and wages, leaviper men to work under tho intluence of public spirit, and makin's an eorqual division of the promine. Sice Somalish. The term Commmist, on the other hand, has been applied to those whon a step further, and propose to almish the relation of hushand and wift: along with the system of fomestic government whieh is foumber on the barental anthority. While lonis I'lane may bo considered the head of the sociahists, the mpresentatives of the Commments are Iiobert Owon, it Nimm, Fomrier, Proulhom, and Enfontin. A knowledere of the projects of these men has fortmately of late yoars diminisher in importance; and it is almost furgotten that, daring the French revolntion of 1845 , their literature was greedily examinem, under a terror that the leaders of $C$ were $t$, rule the destinies of France and of other nations. It is said, indecd, that there is at this moment a powerfal umder-curment of $C$. both in France and in ( $x_{0} \mathrm{c}^{\circ}$ many, ready to burst forth upon the world when an opportunity comes; but it may be hoped that tho progress continually making in general intelligence, and a knowlonge of economic laws, will avert such a ealamity.

Althongh we manally consider $C$ an especially French fallacy, the first consistent practical teacher of it was onr own countryman, Rohert Owen. Th.
 the Principle of the Formation of the II uman C'hasact:and. the Applicution of the Principle to Practice-in which he printed in large eapital letters, as the key. note of his system, the following ammoncement: "That any eharacter-from the best to the worst, from the most igmarant to the most enlightenedmay le given to any community, even to the worlil at larce, hy apllying certain means, which are to a great extent at the command and under the control. or casily made so, of those who possess the governnumt of nations.' No alarm was felt either at such a text or the comments made on it: nor dill the world see what the anthor meant hy the hint that there were special artificial means for improving the breed, as it were, of mankind, until he struek at the rowt of the domestic organsation, hy such announcements as the following: "The affections of parents for their own children are too strons for their judgments ever to do justice to themselves, their chiliren, or the punlic in the edneation of their own offsprino even if private families possessed the machintry (which they never do) to well-manufacture character from birth.' He furmed an orgamsation, too complex to he here detailal, by which families were to he subjected to a diseipline whieh, that it might he perfoctly uniform, shouk be earried out in farallelograms. Anticipating the results, he said: -These new associations can searcely be formed before it will he disenvered that hy the most simpla anu easy rogulations all the natural wants of human nature may be abuntantly snpplied; and the
principle of selfishoss-in the sense in which that term is here used - will cease to exist, for want of an aldequate rantive to prohuce it.' Ite attesterl his reliance on the efticary of his invention by sinking his own fortune in an attempt to lonild a parallelogram. It was commenced in the year 1s2., at Orhiston, in Lanarkshire: but he dill mot meet with suthicient co-operation, and as his own fumls only sutficed to build one corner of the marallelogram, it was inpossible to give effect to arrangements which were fitted only for a compluten califice in that geometrical form. A considerable number of peophe ahout soo, it is sain-liverl for some time in the building, little to their own alvantage or that of the neighbours, who were naturally 1 rejubticen against them, and probably exacerated their irregularities; the hoilding was son deserted, and afterwarls was totally obliteratell. Gwen had another opportunity of trying his parablelogram organisation in 1843, when 'Harmony Inall' was establisheed in Hampshire by the zealous efforts of his followers, who formed a sort of sect in Eugland. Still his theory had, as be chemed it, anythin! but farplay, since so far did his disciples ilepart from that alsolute undeviating conformity to the 'rational' system, as laid down loy him, that they got tired of his incessant reiteration of it, aud ilemsed him from his affice of "l'resident of the Congress.

Attempts to realise (b ahoad were not more for tunate. Fomrier's system was to he realised in - phatarxes, each containing 400 fanilies, or ahout lste persons. A sum of alont half a million of promets is sade to have been spent in the estalilishment of a "phatanstery' at lambonilet. It failesl, and the fommer of the system, like Owen, attributed the failure to the scheme being hut imperfectly develowe ; but Fourier (1. v.) seemed always to have misgivings when his views were to be transferred from paper to practice. explaining that the preliminary process necessary to alvance human nature to a state of eivilisation sufficient for the enjoyment of the phalanx, was a long process which he eomld not live throngh. The St simmians established a college or curporation at Monilmontant, with a 'suprene father'-who professed to act in that eapacity not only to themsillves, hat to all the world -at their heal. The leaders were brought to trial ly the government of Lonis I'hiliple, on a chatrge of motermining morality and religion. They were subjected to imprisoment, and not having publie feeding with them, they were malle to lear up against the contumely thas thrown on them.

COMDIUTATION OF TITHES. SEe Thims.
compentes, the name of a family, oriminally Italian, of which many members occupied the thron. of the diyzatine empire from 10.7 to lolla, and that of Trehizond from 3 got to 1461 . There are also many fine mansions of the nobility in C . and its suburbs. The port of C., on the lake, is cormed of two piers, each terminating in a symare paxilion, from which masnificent views are obtained. The inhalitantsincloding the suburls-mumber about 20.000 , and are very milustrious. The chief articles of manufacture are silk, cotton, woollens, yarn, and soap, the last article having a high reputation. Ly means of its port, 1 . earries on extensive trate in the produce of the district with Switzerland. C., in the time of Iliny the Younger, had attained to a ligh degree of mosperity as commm Normon. With the fall of the Fimman empire, C. passed out of sight until 1107, when it hegan to war with Milan, and in the course of twenty years was utterly ilestroyed by its antagonist. It was rebuilt in 1155 , by Mrederiek Barbarossa, and remained a republic for two centuries, when it fell into the hauls of the Viscontis, its histury since that time being bound up with that of Milam.

COMO, Latie of (Itai. Lomo th romo, ancient Latins Larus), a sheet of water in lombardy, Nurthern 1taly, lying at the foot of the Lepontine and Fhetian Aips, chictly fomed by the river Adma, which enters it at its north, and issues at its sonth-eastern extremity. The total length of the lake from como th liva is about 33 miles. Abont 15 ml es fron its northern extremity, the promontory of bellawio divides it into two lranches, tha longer of which is luetween 18 and 20 miles; the other branch is alont 12 miles long. The three arms of the lake sometimes receive different names-the uprer part as far as Bellagio being called the Laki of limllano ; the longer branch, on which the town of Como is lmilt, the Lake of Como: and the shorter, the Lake of Leco. Lake Como. howerer, is the general designation. The greatest Irealth of the lake is not more than 3 miles, but throwgont the greatest part of its length, it is much less. The lieaty of the surronnding seenery, and the salubrity of the climate, have mate the Lake of C . the mast celebrated and most resorted to in laty, its shores being evorywhere studided with fine villas. Queen (aroline mee had a residmee here. Numeroms stean-boats ply uman the lake.
(:OMODO', an islame of the Malayan Archipelawo, monsurine ars mites in length, and 16 miles in aserage loreadth.  "onspaname palk of the great chain berhind it. its
 is in the pentected principality of Travancore; and clase to it throw stands, amid a clomp of trees, a village of the same name, with a fow fishormen's luts, some vencrated twaplas, and is Duteh chureh.

at the junction of the Waner and the Danule, whirh is here erossed by a lrindge of boats, abuat for milus west-north-west of lesth. This islanl is romarkahle for fortility, as is, indeed, the whole sumbumbiner district. The town, which is irmonlarly bunt, with narrow gloomy streets, contains 17,000 inhalhitints, almost exchasively Mineyar. "llue fortress was erected by Matthins ('urvinus, aml was restored at great expense in 1805. Its works amb intronch. ments exteml alont seven milos along the fanks of the rivers, and it repuires for its defence at least I5, 090 men and 400 piecoss of artillery. It has the reputation of being impregnalle, and justitied it in the Ilungrian war, for the Austrians lesimend it in vain from (betober 1845 to september 1819 , and omly becane masters of it at last in virtue of a capitulation. It has mamifactures of woollen and leather, anl an active trade in corn, winn, lamey, fish, and timber.

CO'MORO ISLES, a gromp of four islands in the Nozambique ('liannel, between Africa and Madagisear, in lat. $11^{\circ}-13^{\circ} \mathrm{S} .$, longr $43^{\prime \prime}-45^{\circ} 30^{\prime} \mathrm{S}$. 'The islands, which are of volcanic origin, are called Angraza or Creat Comoro, Anjonan or Johnana, Mayotta, and Mohilla. They are mountainous, the lighost peaks rising above 6000 foet. The snil is fertile. The inhabitants, about 80,000 in $114 m$. ber, are principally Mohammedans, but fetichism prevails to some extent. The manufactures are coarse cloths, jewollery, and fireams. From the report of the British consul stationed at , Johama, it appears that in 1857 tliat islaul impurted British and American mannfactured goods to the value of $£ 4500$. The exports were small, contined mostly to hides, cowries, and cocoa-muts, with ten tons of sugar, the first exported from the island. The prople found their principal employment in commection with ships calling for provisions. The trale of Comoro and Muhilla was of the tame eharacter, but these islands wore nut so much frequentel by ships for the purpuse of victualling.

COMIPANIES' CTAUSES CONSOLIDATION AC'l. See Rallway.

CO'MPANY. See Jont-stock Company and Partivership.

COMPANY, in Military Organisation, is an aliquot part of a regiment or hattalion. In the Britisl service, the companies in an infantry regiment are generally cither ten or twelve, or, if there are two battalions, each has this number of companies. The arrangement is marle to facilitate command and crolutions. The captains, lientenants, and ensigns are all $C$. offecrs. The captain is the chief of a $C$., and the lientenant and cusign are his subalterns or assistants. The C'. is further separated into two subulivisions, of two sections each. In round numbers, and withont reference to special instances, a full C. may be considered to comprise about 100 men, a subdivision 50, and a section 25 . Under the captan's superintendence, the lieutenant commands the first and second sections, the ensign the third amd fourth, with a sergeant to each section. Eacli C'. lais its own arm and accontrement chests, and kecps its awn books.

The subdivisions of a eavaly regiment are into troops insteal of companies. In onder that no confusion may arise from different uses of the same term, the word C . is gradually heeoming disused in the artillery, and replaced by battery.

COMPANY, of a ship, is considered to include the whole of the persons engaged on hoard, aud paid for s recitic duties-exclusive, therefore, of troops
115
and passengers, lat inclading naval officers as well as crew. See CIIFW.

COMFA'RATIVEA ANATOAK. See ANATOMY.
('OM1PA'R1SON, in Grammar, atma als appliml to Adjeotives ( $1 . v$. ), is that which marks the retpree in which the quality is attribuded to the objoet, ats comphared with othre ralijects. Thore ase threo
 ynality generally, withont eomparism ; the compumetone, it higher dogme of the quality than is attributal to other things ; aml the superfution, the highest legree that is attriluted to any of the things undre comsiderntion. Thure are two ways of txpressing these derrees. 1. Wy an indlection or cliange on the wird; as, hard, harder, harbest; hopmy, hempier, homperst. "This mode prevails almust exclusively in Greek and Latin. 2. Iny an arditional wornl, as mure hermm, most herphy. This may be called logieal ('.: the other, rramantical. In French, with the exceltion of a few irremblar. aljectives, all adjoetives follow the logical methent. In Juglish, the logical method is preferred in every cuse where the grammatieal would pronluee a word diflicnit or laush in the pronunciation. 'I'lis is generally the case in English when the simple auljective is of more than one syllable: but it is not always so. Thus, cirnester', pualentro, would nake barsh combinations: nut so pelitur, diserceter, héppier. The difference is, that in Arnestrr, pridenter, the accent boing on the first syllable, two unacecated syllalles uf lisenmant character are thrown togetber ; in politer, diwerietre, the macconted syllables are semated; aml in hampior, thangh they eome together, they are of a kint readily to coalesce. Thus, the laws of euphony -which mean, the ear and organs of specch comsulting their own convenicnce-determine this point, as they do much else in language. In gencral, it is only adjcetives of quality that almit of $C^{\prime}$; aum even adjectives of quality cannot be compareal when the puality does not almit of begrees; as, a circular space, a gold ring, a unieresal wish.

Adverns ( $q . v$ vi) are compared exactly like adjectives.

CO'MPASS, Maminere's, is the name qiven to tho instrument by which sailors are enahled to steer their course on the ncean out of sight of land, and when weither sun nor stars are visible. The ancients, to whom it was mknown, conld seldom venture to lose sight of the const. The dircetive power of the magnet seems to have been manown in Europe till late in the 12th century. It apin'ars, however, on very gool authority, that it was known in China, and throughout the East generally, at a very remote leriod. The Chinese anmals inileed assign its discovery to the year $26 ; 3 \pm$ B.C. when, they say, an instrument for indicating the south was construcked by the Emperor How-ang-ti. At first, they wonld appear to have used it exclusively for muilance in travelling by land. The earliest date at which we bear of their using it at sea is somewhere about 300 A.D. Accorling to one account, a knowlerge of the (. Was lrought to Emroge liy Mareo Polo, on his return from his travels in C'athay. It was long contended that the $U$, as a natical instmment, was first invented by Flavio Gioja, a native of Analti, about the year 1362 ; and that that part of the kingdom of Nuyles where he was born has a compass for its arms. For this there is no anthority whatever, as the ('. was well known as a nantical instrument before his time. It is probable, however, that lioja may have made sonie improvement in the instrument or in the mode of suspending it. See British innual jor 1537.

The essential part of the C . is the magnetised neerle, batanced freely upon a fine point; such a neade has the property of arranging itself in the merilian, one emb always pointing to the north, and the other to the suuth (see Mabertism) ; jet not exactly, but with a deflection or chatimetion (4. v.), which varics from time to tine in magnitnde, and may be towards the west or the east. The form of the needle is varions, sume being lunf flat prisms, others lozenge-shaped. The contre of the nerdle is piercen, and a piece of agate generally inserted, with a conical hole sumk in it, to receive the tine pont of the steel pin, so that the free motion may not be hindered ly friction. The construction of the rest of the instrmuent dejends upon the purpse it is to servc. For a marimer's C., the needle is fixul to

a cireular cart, on which there is a star of in rays (see the figure), marking the $3 \geq$ points of the leaverns. The worth point of the card is immediately over the north end of the nedle, and the eard noves with the needle. The cardimal pints are marked with the letters N., S., E. W. ; and the intermediate foints. by an ingenions system of nutation, the principle of which is rearlily seen ly inspretion of the tigure. The points are often sublividud into gmarters, which are thos marked: N.fe. (read, ' north one-fourtis
 being ${ }^{\frac{1}{2}} \frac{1}{2}$ of the circle, is cqual to 11 15. The 6 thes formed is enclusel in a cyblindrical hass hox; and in order that the $C$, may remain horizontal in all positions of the ship, the box is suspmuled by Gimbals (q. v.). The whole is then phaved in the Limacle (q. v.), in sight of the helmsman. Inside the lnax, in the direction of the shipis how, is a vertical back line cailed the lubher-ines and the stecrsman must keep, the pint of the card which marks the preseribel comse always in contact with the black line. Compasses dillerimg in sonne respects from the mariner's C. are also ustel in surveying and land-ncasuring; and for the miner they are jerhiths as necessary as for the sailon.
The great dificolty connctesl with the ase of the matrinces C. arises from the disturbing inthome of tha manctism of the ship. This difficulty is prett culaly folt in iron vessels, where the chevation of the monde. is frequently so considerable as to romber the rompass almost nseless. Viarivas manns of obviating this have been surgested; one of these is to phate bars of solt irm or magncts in the immo
 Son farcel as to cause a contrary disturtance to that of the irm of the ship, lave the nedle combaratively frec. This is fomm to answer well in iron Fhipa plying betworn british amb continental ar North Aimemparts; lut where, as in the Australato lamion", they change consileraibly their latitude,
such an arrangement is fomm to be worse than uscless, as the mametism of the vessel changing wath the masnetic latitule, causes an ever-varying deviation of the meedle. It has likewise been surgeated to place a compass as a standard at the mast-lical, where it would be commaratively free from the attraction of the ressel, by which the ship's course might be shaped, the ordinary C. being used merely to give immediate direction to the steersman. In the royal navy. this error is to a large extent olviated in the following way. A C. is paced so high above the deck as to clear the bnlwarks, and allow the bearings of a distant object on shore or a heavenly borly to be taken while the ship's heal makes a complete circuit. In this way, the deviation caused by the iron of the ship in all different !ositions may be ascurtainel, and afterwards taken into acomit.

COMPASSES, instruments for transferring and marking oll , distances, or for drawing circles, ellipses, se. The cummon C. or dividers are simply two rods or 'legs' joincl tugether at one end by is pivot-juint, and pointed at the other; when used fir drawing circles, the lower part of one of the legs is replaced by a pen or pencil. Spring dividers are much in use by workmen; in these, the legs are unital by a strong steel spring, the action of which is to stretele them opew ; but half-way down, a screw passing between the legs, regulates the degree of opening. The value of these depents upon the permanency with which they retain any desree of opening given to them, pirot C. being hialle to slip.
beem C. consist of points sliding on a long bar, to which they may be elamped at any distance from each ather. They are used for greater openings than piyot C. can safely span, and, when delicately made, for more accurate dividing. See Drvidivg Exane.

Proportional C. have a point at each end of each leg and the firnt between, thus forming a double bair of C. opposite to each other, end to end. If the pivot is midway lutween the points, the oprening of cach pair of points will be equal; if the distance from one pair of pints be double that from the other, the openings will be as two to one; and so on for any ratio. When a single fixed proportion maly is requined, the pirot is fixed accordingly; lout to alap them for variable proprortions, the liwot is a clamping screw, which moves in an clougatel interval in the legs, and may be fixed at any pomet.

Thimontur C. have three legs, so that the points of a triande may be all transferred at once.

## C'ulliper Compusses. See Cillipers.

COMPASSIONATE ALLOW ANCE is a gratuity which arose out of the sympathy of the mation with the liritish army dowing the Crimenn war. By royal warrants, issued at diferent times in 1sion and tsin, an allowance is mate to the widnws aml chilimen, or to certain other specified relations, of military offecers whe since the dato of the duclaration of war with linssia, have been killed in action, or have diod of wounds received in antwe service. If tha allowance be in the form of a trataity, in me sum of money, it hears a certain d 1 inite relation in :monent to the sums which the atherer lad paid for the parchase of his commissinn: lout the recipicents lave the alternative of a prosinh or anmal ahowance. Very stringent comulitims are latid down to cutitle any family to this C. A., secing that it is a costly, though just aremgement.

OOMIDENSA'TIUN (Lat. compenatio). The doctrine of ('., which the law of Scothend and of
most of the other states of Euron have borrowal from the civil law of home consesponds to that of st-af in Englaml. It proviles that where two parties are matually delitors and aceliturs, their duhtw shall extinguinh rall wher, if erpal, ant if uneotual, leave only a balance duo. C. must be phended, as it does not onerate ipoo jure, but, when plealed, it is hede to ancrato fran the premion of concmusse, the interest on "ither side bemis stopped from that time.
(ompresutio Injuriurum is a lufence against actions of dimares for slander or the like. It is rat a bar to action, hut a sef-eff or enunter-clam. In lingland, it is not allowed to set-otl one trespass or tort against another-a cross-action is reguisite; and in sicotland, the leaning recently las been in the same direction.

COMPENSATION OF ERRORS, in Ihysies, a method of neutralising errers which cannot be avoided, by introducing others into the experiment or olservation, of an opposite nature, and equal in amount. The compensation pendulum illustrates the principle. See Pendolum.

COMPETITION (Lat. a seeking togrether) has heen well defined by Dr Julnson as the act of eudeavouring to gain what another endeavours to gain at the same time.' Its most apt exemplification is a race, where all are going to the same point, and all strive to be first there, while though only one can achicve this object, some others will have the satisfaction of being nearer to success than the compctitors who are behind them. The most important practical use of the word C . is in the political economy of commerce, where it is the great motive-power of production and enterpmise. People work, or embark in trade, avowedly for the purpose of making money. It is the olject of the law of the laud, as well as of religion and morality, to prevent money-making by immoral means; but within the bounds thus drawn around it, money-making is the object of man's exertion. When the money is made, the next peint, always within the same bounds, is to make it go as far as it wilh. C. works through the cu-operation of these motives. The purchascr wants the best article he can get at the lowest price; the producer strives to beat all his fellows, and offer the best article for the price. So thoroughly is this prineiple established as one consistent with commercial morality and honour, that our railway compmies, managed by men of rank and fortune, many of whom are members of the legislature, do not hesitate to make travellers pay a larger fare for going 20 miles on their line to a station not tonehed by a rival company, than they will charge the same passenger for a journey of 40 or 50 miles, if it be to a station which be could reach otherwise.

Whatever may be hereafter accomplished, what We chiefly know of the attempts to supersede C. by some other motive to exertion, is, that they have not been successful. We see erery day C. increasing the necessaries and comforts of life, and enlarging the wealth of the cormmunity. It is said that there are other and letter motives which should produce the same effect, but they lave not yet been found. It was an object rif the ruling party in the French provisional government of 1545 to abolish C., and place all workmen on a par, as some expressed it, or, according to others, to remuserate them, not accorling to their services, but according to their wants. A great experiment was tried at the Hotel Clichy, where 1500 tailors were employed to make the uniforms for the national guards, the price of which was to be equally divided among the workmen;
but even in that rimax of cnthasiasm, they dis! mot work up to the: mark of the lowest paid of the Paris talors under ther competitive system. As vach one felt that the value of any extra exertion would be divindel :urnow the whole lano, instead of being enjorod hy himsolf, his zoal relixed, and even the thonght of 'liberty, equality, and fraternity" was insutticient to rouse it. It aploars wonderful that large lomies of the Frencla perphs mould have luen so dasily deceived by statements of which the ballary, or rather tha actual inacenrary, would be at once sem throngh by any workingman in this comatry. Lomis blane smposes three compertitors for a juh. A has a wife and family; he wants 3 franes of wages. If has a wife only; $y_{2}$ francs will do with him. Fut 0 is a bachelor, who ean subsist on 2 francs; therefore, he gets the jol, and the others starve. See the second chapter of his Orgmisution du Travail, the title of which is, 'Competition is for the I'eople a System of Extermination.' But he leaves out entircly one side of the bugain. Employers compete to get work as much as workmen compete for employment. If the work of B and C le worth, in the market, 3 francs, they will get that whether they lave families or not; and it is not the praetice of a working-man, any more than of the rest of the human species, to give his work at a third less than its value because The is a bachelor. The Socialists have referred to the public departments-especially to the post-office arrangements in Britain-for instances of services performed without competition. There is, however, in reality, much C . in all the government departments. Although tradesmen may not endeavour to undersell each other by making goods and offering them to the government, yet they endeavonr to mulersell each other ly offering to umdertake contracts at the lewest price. Doubtless, the practice of entering on goverument-contracts is open to abuse, if the officers who look after them are careless, and neglect the detection of fram or inefficicuey. But the service of government by contract may be made as effective as any other kind of competition.
There are circumstances in which it is necessary to dispense with the external form of C., but where its influence still rules. For the convenience of the public-especially of travellers-rates of fares are established for cab-drivers, porters, ferrymen, and the like. These men cannot be fored to undertake such functions: they do so because it pays them. Instead of making a seprate contract for each job-an arrangement operi to frand and inconvenience-they make a genemal larrain with the public to serve all-comers. The rate of remuneration they receive ought to be the closest possible alproximation to what $C$. would tix. Whether it is so or not, ean be easily tested. If men do not come formard in suffiegint nombers to serve the publie, then the fixed rate is tno low; on the other haml, if there is a superfluity of hands, a percentage of them being at all times unemphoyen, it is clear that the rate is too high, and that eren partial employment in the line is sufficient to indnce men to leave other eccapations.

One of the most phasible arguments against free C. is, that it thows away labour by producing more gronds than are required. Fire humdred hats are wanted, Lut a thousand are produced, and therefore half of them are wasted. In some such sbape, the folly and waste of C. are generally illnstrated by continental writers. It is very rarely that dealers are so utterly blind to the demand for the article in which they trade. It must be admitted, hewever, that C., kike all other useful things, Las its peculiar abuses, and of these perhaps the chief is the jropensity
which some tradesmen have to earry rivalry to the extent of vicious excitement, and to endeavour rather to get the better of each other than to make their separate fortunes. From this spinit, it frequently happus that when one man has established a successfud business in some new locality, another, insteal of trying a different lusiness in the same flace, or the same insiness in some other and similar place, sets himself down as a rival, and ruins both. One sets up, for instance, a groceryshop in a new suburl; he succeets, , hat there is not business enough for two; and if a rival sits down beside him, foth are runed; whereas the suceess of the grocery should rather have hinted that a butchery or a hakery might have a good chance in the same place, or a grocery in some other suburb if similar character. Speculators in omaibuses and other horse-hired vehicles are sig nally lialle to this sort of rivalry. often seeming unable to enture the sicht of a brother of the trade driving at good, quiet, tolerably paying husiness.
C. for mullie offices- that is to say, the apmointment to them of those young men who have shewn the highest proofs of alility accorting to certain tests-has so recently been adopted, that there is little opportunity of jurging of its effects. lint it must he kept in viow, that this is something quite different from the kind of C . refered to alove. Clever men may be secured to the public service by such a test, lat it is clear that the motive for these clever men, as well as other public servants, doing their atuty, must be something in the shape of promotion or otherwise, which will have a cmstant intluence "n them after they are appointed. See Eximination.

COMPIEGNE, a town in France, in the department of the Oise, stands on the river Oise, a little belorr its jumetion with the Aisnt, and 33 miles cast-south-east of Beaurais. A fine stone-bridge crosses the river at this $I^{\text {wint. The }}$ town, which is inregularly built, has a tribunal of the tirst instance, and one of commerce. The inhabitants, numbering 8767, are employed in hosiery, rope-making, boat-bulding, and in trattic in wool and corn. But what best deserves observation at $C$. is the mamificent palace. built anew by Louis XV., and splemililly fitted up, ly Napoleon, who often occupitd it. It contains it library, a pieture-gallery, and other uljects worth seeing. The park is extensive, and adjoining the gardens is the beautiful forest of Compingue, extending over about 30,000 acrus. C. is mentioned in the times of Clovis under the name of Compendirm: and it was the seat of several prolitical assemblies and ecelesiastical comeils. It was at the siege of this town, in 1430, that the Maid of Orleans was cantured; and here, in 1810, Napoleon and Itaria Lonisa of Austria first met, on occasion of thein marriage.

CO'MPLEMENT is that which completes or makes np a given magnitude to sume fixel magnitude. It is most commonly used in mathematics, to signify the are or angle ly which a given are or angle falls short of a quadrant or right angle: thus, the $C$ of an are of $60^{\circ}$ is one of $30^{\circ}$; and that of $30^{\circ}$ is one of $60^{\circ}$. -The arithmetien (: of a number is the number by which it falls shmert of the next highur number 'xpressible ly tens: thes, the arithnetical C. of 6.1 is $100-61$ $=30$.
(')MPLADENT, in Music, the quantity requirch to be aldal to any interval the complete the actave; fur example, a fourth is the C . of a fifth, a third is that of a sixth, \&e.

Co'metanid See Canonical Hocres.

COMPO'NA, or GOBONY, in llerathy. When a bordeur, pale, hent, or other ordinary; is made up of two rows of small squares, consisting of alternate metals and colures, it is called componé.
COMIO'Sita (called by Lindlyy Asteracee, and by some botanists Syvanther.s), a natural order of exogenous plants, listinguished by rompound or composite flowers, i. e., heads of flowers which are composed of a greater or smaller number of florets (generally of small size) congregated upon a common receptacle, and surroumded by bracts which form a leafy or senly involucre, so as to resemble single flowers, which amme they ordinarily receire. Another very marked characteristic is, that the anthers of each Horet cobere into a cylindrical tube. The order contains both berbaceous plants and shrubs; those which are natives of cold climates being generally herbaceons, and those found in warm regions shubly, or even arborescent. They have alternate or opposite leaves, withont stipules. The florets are either unisexual or hermaphroditethose of the circumference (or ray) often differing in this respect, as well as in form ant colour, from those of the centre (or alise) of the same head. Bracts (palect) are often interspersed with the florets upon the receptacle. The calyx is superior, elosely athering to the ovary, and essentially united with it, and afterwards with the fruit, its limb either obsulete or membranous, crowning the ripened fruit, often divided into bristles, hairs, and feathers, which form a Pappus (g. v.). The corolla is of one petal, superior, either strap-shaped or tubular, both forms often appearing in different parts (ray and dise) of the same Hower (or head) sometimes 2 -lipped, very often 5 -toothed. The stamens are equal in number to the teeth of the corolla, 4 or 5 , and alternate with them. The ovary is I-celled, with a single erect ovale; the style simple, with 2 stigmas; the fruit dry and not opening (sce Acheniom); the seed destitute of albumen.-This is the largest of the natural orders of flowering-plants, containing upwards of 1000 genera, and almost 10,000 known species. They are distributed over all parts of the world; but increase in number from the poles to the tropics, ant thence, again, diminish towards the equator. In the Linnean sexial system, they form a distinct class, Sungenesla. Jussieu subdivided the order into three sections, and although other subdivisions have been proposel, these are generally recognised as sub-orilers-Cinaroceplale, having the florets all tubular; Corymbiferf, having a dise of tubular tlorets, surounded by a ray of strap-shaped tlorets; and Cichorace.e, having all the florets strap-shapel. The Cichoracee abound most in cold, and the Corymbiecte in warm climates. The Artichoke and Thistle are familiar examples of the Cymarorephalof; the 1naisy, Aster, I Bhhlia, Chrysanthemum, Chamomile, and suntlower of the Corymbiferes; and the Bandction. Chicory, and Lettuce of the Cichoraces. liy cultivation, many of the Corymbiferae are changed so that the Horets of the disc assumo the same appearance with the florets of the ray, as may lie seen in the Dahlia, Chrysanthemum, Aster, de., and they are then said to be double, althougb the change which they have undergone is very diflirent from that which has taken place in donble thowers of wther kinds. The C. are not, in general, uf very great impurtance in romustic ceonomy or in tho arts, although many of them are anong cultivated and useful pinits. Only a few, as the Artichoke, Seorzoneral, Salsafy, Jerusalem Artichoke, lindive, and Lettuce, are used for food, and these are of inforior importance in that respect. A very fuw, as Nilllower and saw-wort, afford dyc-stuffs; and at tery fow, as the berusalem Artichoke and Clicery, are occasionally cultivated for food of

## COMPOSITE ORLDE-COMPOSITION AND RESOLUTION OF FORCES AND MOTIONS

domestic animals; the use of chewry rowt as a substitute for cuffe is woll known. From the sends of some, a bland tixad wil is "xpressiat the Smflower, Malia, and lan-til bong the most impertant. Many are valuahe for the mediemal proproties, as Chamomile, Arnica, Whmmond and some other speries of Artomisit, Eherampan: Tussildat, Blessed Thistle, de. Many aro charantmism by bitterness; stimulating propertios arm of freduent wecurence ; also anowy, diaphoretic. dinetic, and narentic propertios. Shme, as Amica, are very 1 wisonsus, $A$ large nomber ape whement manments of our thower-garions, partioularly in the lattor part of summer and in autumn. Sinmest thess, the Dahlia perhaps holds the first place; and others, searenly less inmired, holoner to the erenera Aster and Chrysanthemum. The wood of the Niriohont (Tarchonunthus comphoretus), a small tree of the ('ape of Geod Hope, is close-grained, heary, and very heautiful.

Co'mposite órder, in Architecture. See Colomes.

COMPOSI'TION, in Art, signifes such an arrangement of the separate objects represented as that they shall all mamifestly tend to lring out the centre thought or idea which animates the whole. Episodes and digressions are less aumissible in esthetic works of art than in juetry, and less in plastic art than in prainting. In all works of art. it is to le borne in mind that the stury is t" be told to, and apprehended by the eye alouc. There is no surer prove of failure in asthetic (C. than when a picture is found to be totally unintelligithe, eren to intelligent persons, without the ail of a description in a catalogue. Rules are of little or m, avail in this matter. There is but one canm of universal application-viz., that the artist should, in the tirst place, make it clear to his own mind what his work is to express; and that be shoull then comsicer by what arrangement of the odjects that must, or may, be introluced into the picture, this will be best accomplishot.

COAIPOSITION, in Pankruptes, a certain sum fer pound which ereditors agree to receive from a bankrupt in lien of full maynent of his debts, and the acceptance of which oprrates as a discharge to the bankrupt, and reinvests him in his estate. In a private settlement, the acceptance of a $\therefore$ bill, umless the contrary be stijnuaten, only entitles the creditors to rank for the C , and not for the full amount, in the event of a secoml bunkruptey. If no C. bill he accepted, and there be no acerssion to a C. contract, it has been leld that the ereditor may. in a seconel bankruptcy, rank for his full delt. İll a Scotch sequestration, the hankupt must fins security for payment of the (') to tha satisfaction of a certain proportion in number and value of the creditors, which proportion varies acenoding to circumstances. The cantioner is only hame for two years, but recourse against the bankrupt is unlimiten. In a private settlement, an individual creditor may refuse a C.; but in a sepuestration, the majority hinls the minority to accept. If the bablinpt ama his cantioners camnot meet a senuestration U., then estates are only liable for the $1^{*}$. amonut.

COMPOSITION AND RESOLUTION OF PORCES AND MOTIONS. 1. The fumdamental problem in staties is to find the magnitude and direction of the realtant of two forces; in other worls, to compond them into a single force, which shall be in every respect their equivalent. Intensity and direction being the only elements necessary to entirely Itescribe a force, forees in staties are represented by lines, which are obriously capable of leing made to represent them both
in magnitwhe and dirattin. When two forens act along the same irainat lim on a partiola, it is sufficiontly ulowions that if they anet in the same dircotion, the result:ut will has tha ir nlyptraiond
 aliflewner. This bong permised, the rulation betwon two forece actins at the same point, hat not in the same line, and thmir resultant, is sue firth in the follow ine theoman, which is knewn ats the Forolo Whopmin of fimon: It two forees, F , Q, acting an a particle is, bu repme
sentol in direction and marnitule ly the lums $\quad 1 / 2, \quad 1 \%$ then the resultant will be reparsention in direction and magnitnde ly the diagonal Ar of the
 parallelogram doscribed "uon Ap, A\%. The prouf of this depends unon the simple principhes, that a fore may be supposed to aet at any joint of its direction, that pont being conceived to lee rigidly aftached to the maticle on which the force acts; and what may be accepted as an axiom of universal experience, that when any nomber of forces are impressed on a marticle or hody, each exerts itself, as if the wthers were not deting to proluce its full effect. See any dementary treatise on Mechanics. The doctrine of the parallelogram of forces has given rise to much controverss, not as to its truth, hout as to its derivation, some ctprearing to contend that it is directly delucible from the axiom alove stated, without the necessity of further reasoning. - K nowing how to compound two forces acting at a point, we are able to compond or determine the resultant of any numbre. If the forces, thongh in the sance blane, do not act at the same point of a body, those of them whond directions meet may be compunad d by the preceding rule; if they are parallel, their resultant is a force prallel to them and equal to their alselnaical sum, comontion those acting in one lirectinn as 1 msitive, and in the opmosite dircetion as nuegative. For the position of the resultant in this cibe, see Pabaliz Forces. The singular case is that of equal parallel forets acting in "n?". site directions. These constitute a comple, and camot be represented by any single force. See Coufles.
2. The resulution of forces is the conserse porblem. To resolve a fiven force $D$, whase tirection and maguitude is $\bar{A} r$, into two forees acting in any directions that may le chosen, as $A 1^{\prime}$, A!, we have only to draw parallels through $\pi$, which determine the hans $A p, A_{y}$, representing the magnitude of the fores required. It is evident that there is an indefinite number of pairs of farces into which Ar mizht be resolsed, according to the direction in which the new forces are to act. It is mshal, however, to resolve a force into forces that are at right angles to each ather.
3. The commosition of motions is amalomus in every way tothat of forces; motions are the results of forees, anit the malowy mint he expected. If a body be actuated simultanennsly by two velocities having different directions, it will evidently move in a direction intermeliate to the two, and with a velucity which will in some way depend on each of them, and which is called their resultant. The pronnsition which set = finth how to find the resultant, is calleal the Parnlhompam of lelocitios. It is: If two rellocitios, with whel a particle is simultanenusly impressel, be represented in direction and magnitule loy two straight lines drawn from the particle, the resultant relocity of the particle will

## COMPOSITOR-COMPOUNDING OF FELONY.

be represented in livection and magnitude by the diacrinal of the parallelogram described on those two straight lines. The proof is very simple. There is no reasun why the full effect of both relocities should not lee produced, as if the body moved first with one of them, and then with the other in their respective alirections. If in one sarmel the boty moving with the one velocity would reach $f$, and if we sulpose it then to move on pr for another second, pramel with the other velocity, it womlal at the equl of the second secom] lie at $r$. Honce, muler their joint infnence, it will be at $r$ at the end of one secomal.
4. The resolution of motions is altogetler analogous to that of forces.

## COMPOS MENTIS. See INsanity.

COMPOS'TELLA, Nilititey Oriter of St
Jhmes of. St James, the chler, was alopeted as the patron saint of Spain, after the victory of "lavijo, and his relics were preserved at Compostella, the eapital of the province of Cralicia. 'lhe marvels supposed to be perfommed by these relics. drew yast mombers of pilgrims, for whose support hospitals were estalilished hy the pions canons of St Eloy. The viciuity of the Moors lavins sulsequently rendered the high-roads unsafe,

from the inture were heelired Cross of the order the prumerty of the wader, and a Compostella. thirteen nollemen united for the protection of the pilgrims, and, in ennjunction with the canons, resolved to foumel an order of the same kind as that of the Hospntallers on lemplars. The prope granted his assent in a hull. dated Eth July 1175 , acempanied with the statutes of the order. Whatever eonuuests were made comncil of thirteen linights was vested with anthority to elect and depose a grancl master. 'Ihe linithts mave vows of porerty, bledionce, amd eqlibacy and professed their belinf in the immaculate conce $1^{1-}$ tion. To protect Christians, and convert infinlels, they vowed to le the only object in their war: with the Saracens. In must of the great battles hetween Christian and Noor, the red cruss of the order was eonspucuous. The comourets of the order itself, combined with the grateful muniticenc. of the nation, speedily incratsen its wealth and power heyond those of any of the wher orders of knishthoor. In andition to the there lareo commanderies of Leom, (astile, and Montalyan, it possessed nearly 200 minor commamlories, comprisimer it is said, more than 200 priories, with many finfo, loisters, hospitals, castlos, lumomoth, two towns, am1 178 villaces, exrlusive of its possessions in Portugal. This enommons wealtl and power of the order excited the jualonsy of the crown, in whith, in 1522 , the gram mastorship
 becone merely homorary ans depmelant ont the crown, the arder rapidy ilecratsed in inpurtanco.

Co'MPOST'S axe a kind of Nantur (q. r.), consistion of mixtures uif sulstances :udaped to the fortalisation of the sob, which boind allownal to furmont, and undoreo chomical chatumeg for a comshbrable time in leaps, bereme more valualow than they were at first, or ever cond have ho..日 if apphod sopamaty is. were formonly mate of farm-yand matsure, and earth ur lime in :ulilition. limalorpupmes, prat-moss, leaves, and clearimg of ditetum, al-a, lommel materials for the jurpose by allowime there to liw in huaps for sid monthes, of 164
from three to fonr feet in depth, fond was prepareal for plants. The mass was usually applied to the turnip-crop, and when artificial manures were unknown, considerible lenefit arose from such dressings. The use of guano and other light mannares has superseded in a reat measnre the necessity of this laborious process, annl C. for the turmips or barley-erops are now little used. The wonderful effeets that have resulterl from the application of small doses of nitrogen and phosphoric acid, have impressel farmers in general with the truth, that the most encrgetic elements bear a small proportion in weight to the whole mass of farm-yard dung or C., and that the mixing of manures in heaps with earth does not so much adl to its virtues as to repay the labour expended in the rrocess. More care is now rightly bestowel in preserving manure from washings by jain. C. formed of leares, ditehscowrines, roal-scrapings, or any earthy matiter containing a large perevatage of vegetable matter, with the addition of lime, may still be used with hencfit for pastures that are deteriorating, or where the soil is stiff. Where moss prevails, lime should enter largely as a component. On the other hand, where the soil is of a strong and clayey nature, earthy sulustances containing regetable matter in larger proportions should be nsed. Vegetable matter has the efleet of imparting a softness to the surface, that is particularly condncive to the free growth of pastures. Compost made of turf, leaves, earth, and bone-dust is used with great benefit by gardeners for vines and fruit-trees which are injured by too concentrated manures.

COMPOUND A'NIMALS are those animals, exclusively of the lowest classes, in which individuals distinet as to many of the powers of life, are yet mited in some part of their frame, so as to form one living system. Examples of this union are found in many anmalenles aud zoophytes, also in cestoid worms and ascidian mollusks. The whole living syotem in all C. A. appears to originate from a single egg or germ, and each is at first simple; the sulsequent multiplication of individuals, having distmet organs, but permanently retaining their connection with the system, has some analogies with sume of the moles of true reproduction. It is inportant, also, to olserve that many $C$. A. exhilut very cluse relations to other anmals which in no deyree pussess this remarkable character. The subject of ( S. is in many respects in extremely interesting one. 'This oecasional peculiarity in animal hfe may perhaps be regarded as affording somm conntemace to the theory of Darwin concerning plants, that eacls but is to be accounted a distanct inlivirlual. Lut the term individual must be monditical in its sease, when applied to the buds of a tree, or the propes of a polypidom.

COAHPOUND CONMON TIME, that species of mosaure containiner the ralue of two dotted minins in a har, or two dotted erotchets, marked thus:

##

prosecute a folony, and is phaishahle with fine am! imprisonment. Compundng of infomations man penal statutes, and wompominis of misk momanas, are also illegal, unless with lawe of whe of the marts at Westminster, and are phaslalyle in a hyhator degrec. But in misdemeanours affecting the person omly, as assanlts, \&e, an inferior manistrat" will often permit the defondant to make the prowenten some pecaniary aments, and theremon rimit the lmble punishment. A species of C . of l . is the advertining a rewald for stolen property, compled with words implying that mo guestions will be asked, or that no forsachtion will be instituted, ur that a pawnbreker returning the property will bo paid what he has advanced for it; ant this offenere, by 7 aud 8 Geo. V. c. 29 , is pmishable loy a tine of xire, on the alvertiser, phbisher. and printer. The s and ! Vict. c. 47 (often called Bishop's Aet, from the name of the gummaker in Bond Strect) applites a similar rule to the ease of stolen dogs.

COMPRE'SSED-AIR DATII, a large chamber in which patients sit under increased atmospleric 1 ressure for a greater or shorter perind. An attempt at this kind of treatment was manle as carly as leriz ly Dr Henshaw, but failed, owing to the imperfection of the apparatus. The apparatus, as now ased, is the invention of M. Fmile Laturice of Paris, who in 183: conducted a scries of carcful experiments upon the effects of the atmospheric air at aliferent. densities upon the human frame. The bath is a chamber 9 teet in diameter, and 12 feet himp; it is constructel of iron plates rivetted together like thase of a boiler of a steam-engine, so as to be perfectly air-tight; it is provided with two close-titting iron doors, which can be opened withont affecting the pressure of the air within the chamber: the interior is lined with wool, and furnishol with seats; $n$ stean-engine of seven horse-power works a pair if large nix-pums, communicating indirectly with the chamber by a pipe that opens by means of numerons small holes in the lonttom of the llowr. so that the air enters imperceptibly into the chamber; from the roof, a pipe sinilarly arranged allows the breathed air to escape. Each of these tubes is supplited with a screw valve, by means of which the inlet and exit of the air are regulated. Two barometers hane on the walls of the chamber, to shew the rate of increase and decrease of pressure. The pressure is raised at the rate of one poud every fonir minutes. and the lowering takes place at the same rate. The pressure is usually raised to seven jommls per square inch-in addition, of comse, to the usial pressure of the atmosphere. The perion generally prescribed for patients to remain in the bath is two homs.

The diseases in which the C. B. is said to be most, efficient are phthisis, asthma, and chronic bronchitis. The effects are attributed to two causes: 1. A greater quantity of air, ant consequently of oxygen, is inhaled in a given time ; and not only so, but the amount absorted is increasel in propution to the pressure of the gas against the walls of the airvesicles. The increased absorption of oxygen amd excretion of carbonic acill emalites the langs to per. form their functions more efficiently, and therely remores any cougestion existing in these myans. 2. The increased mechanical pressure of the air upon the mocous membranes, when in a state of chrouic cougestion, has a lracing effect, and imparts rencured vigour to the entire structure of the lunas and bronchi. At Bemrhydding, the 6 , is used in cases of the kind alove named, along with the nsmat appliances of the water-cure.

COMIPRESSIRILITY is that property of lodies by which they adnut of being forced or pressed into less space than they formerly occupiel. The
particles momposiner hodies are in all cases at greater or less dintancis from whe another; and whatever
 vohum or bulk of the buly. Thrs may ta efloctal
 hat (1. v.); hatt ine offent is callod compression only when it is cansed lo menamical forme, as by bressure ur pronssion. COMlU'TATION OE TIME. See Time, Corectares or, in Law.

Conditb, a villate amb parish in the midue of Perthishere on the Furn, a little east of Loch Earn, aud :l miles west of l'esth. It les amid the very pheturespue sepmery of the clay-slate hamb of seotland, and is moted fur frequent slight shoclss of warthnakes. It has woollen and cotton wearing. aud distilleries.

COMTE, ALecste, the founder of the 'Positive L'hilosophy, was born at Montpelier in 1795 or 1797. IIe studied at Paris: and at an early feriod, it is said. attracted the attention of bis compranions by the buhaness and novelty of his spectalions, maintaining that the time was come when phalosophy must molergo another great chamre, such as it had dune in the days of Bacon. Mrit. H. Lewes, who regards $U$. as the Eacon of the I9th $e_{\text {., only }}$ nuch greater, informs us that $C$. was hat foumeel. when "the reforming spirit awoke' in him (see Erposition of the Primeiples of the Positive Philosophy by G. II. Lewes, Bohn, London, 1853 ). Shortly after this, and while still Iabouring under the excitement of his new convictions, he became acquainted with St Simon : entered enthusiastically intu his theories, which had not a little in common with his own, and which possessed in allition this allyantage, that they were the results of matured thinking (St Simon being then between fifty and sixty): and in 1800 , was appointel by the master himself to prepare an exposition of the Politique Pusitive of the St simonian Society. The work did not satisfy St Simon, who deplored the absence of the religious and sentimental aspects' of his srstem. In 152j, on the death of St Simon, C. Droke off altogether from his confieres, and in after-yars, was accustomed to speak slyhtingly of his old master's abilities. In IS26, C. Was attacked by a cerebral disorder, brought on by 'overwork and beart-anxieties.' Ife recovered, however, and in 1832 , was appointed professor of mathematios at the Erole Polytechrique, which situation he was forced to resign in 1552, on wecomat of ditlicrences with his colleagues. It t tidd at Paris, September $185 \%$.
C.'s works are-Cours de Philosonthie Pusitice (6 vols., I'ar, IS30-IS4?: freely translateel into English, and condensed by llarriet Martinean, 2 vols., 1853), Traité Eténentuirp dp Gciométrie Anctlytupue (I rol., ['ar'. 1843), Traith et Astronomie Pophuluive (I vol., T'ar. $15 \frac{5}{5}$ ), Diverutrs su: l'Eusemble du Positivisme. (1 vol., I'ar. 154S), Šytime de Pulitique Positive (4 vols., Par. 1851-1sat), and Catrohisme Positiriate, ou Sommuire Lusposition de le Rielifion Thicerselle (1 vol., I'ar. 185*). It is innossille here to du more than state, in the briefest way, C's central and governing doctrine. It is this: The race (like the indiridual) necessarily passes through three intellectual stages-1. Thu theologicul, in whieh a supermatural urisin is somght fur all fhenomema, and the Derts or mochinit is the only explanation of erents, :2. The moterfysifell, in which the wensuonsly supernatural is set aside as incredible, and an eflort is mate to demonstrate the existence if 'alistract furces or contities surposide to inhere in various substances, and capable of cmerndoring phommena; 3 . The pestore, in which the mind athrms the futility both of theolopical and nuetuluysual inquiries, abandons all vain seareh aftrr that rousts aml essomber of things, "restruets itself $t_{0}$ the alsurvation and classification of phenomena, and to the diseosary of the invariable relations of suceession and simblituble which things bear to each "ther; in a word, to the discovery of the lems, rif fhenomenial.' This last is the stage at which ', conoovors lamote to have arrivert. Theolomy and notaploysing atto alleged to be in their clotage, and all the suarehy of morlern life to arise from the
 us from their lourtfal indinenee, (. employs the frinciphes of prsitivism towranise a mew social dretrime, whinl shall matm:ca the entire wants of man as an intollentual and -Hotionsal being. C. thms atims at brine nut maly the formbler of a new philos"phy, but also of a bow religion, and has "ven assumed the titl" uf F'ombetrom de le lieligion de lilumantite.

His riews, which are very orisinal and comprehensive, have excited much attorion amons thinkers in France, England, and Germany, and ulutained not a few ardent willerents.

CON, or COL, an Italian particle, meaning 'with,' mach used in musical terms, as 'con sprito,' 'con brio.'

CONCAN, a territory in the presidency of Bombay, lies between the Arabian Sea and the watersherl of the Nestern Ghauts, in lat. I $5^{\circ} 44^{\prime}-20^{\circ} 22^{\prime} \mathrm{N}$., and long. $0^{\circ} 52^{2}-73^{\circ} 45^{\circ} \mathrm{E}$. Its length is 330 miles, and it faries in breadth from 25 to 50 miles. The more easterly section appears to be a succession of rocky terraces, of apparently volcanic origin. The maritime portion, averaging an elevation of 100 fect above the sea, rises here and there to for greater heights, partly in isolatel hills, and partly in short ranges. The browl estuaries into which the rivers expand were formerly the retreats of pirates. Of the land that is available for cultivation, the larger lart is found on the banks of the riversthe growth of rice in particular lieing promoted by anumal iumudations. The cbief peculiarity of the climate is, that the sonth-west monsoon, arrested in its career by the lufty harrier on the east, has been known to yield, in one year, a rainfall of nearly 300 inches. To omit the city of Bombay, as not being on the mainland, the pincipal towns are Mhar, Junjera, Tatnagheriah, Viziadroog, and Vingoria. It was in 1818, on the fall of the Peishwa of the Mahrattas, that C'. Jecame British territory.

CO'NCAVE. A surface is said to be $C$. when lines drawn from proint to pint in it fall between the surface and the spectator: and convex, when the surface comes between him and such lines. The terms, it is obvious, are mere terms of relation. See Lens and Mirron.

CONCEALMENT, in Criminal Law. The C. of an oftender, after the commission of the crime, with the view of shielling him from justice, is an offence which may le panished arbitrarily; but C., in consequence of an agreement before the crime was committerl, involres the concealer in a charge of art and part in the principal crime (Hume, 274,281 ).

CONCEALMENT OF PREGNANCY AND LIRTH. See Infantichoz.
'ONCENTAINA, a town of Valeneia, Spain, picturesquely situated on a slope of the Sierra Narinla, $2 s$ miles north of Alicante. It is surrounded by old walls, thanked with towers; has some interrsting old buillimgs : anl manufactures of linen. woollen, prper, soap, \&c. The fair anmually held here is one of the largest in Spain. Pop. 8500.

CONClistinlC. Cirches are C. When they havo the same ventre, bat ratii of different lengths.

CONCLPMON: 1. A city near the mouth of the liobso, the prineipal river of the repullic of ''lili, in lat. $36^{\Sigma^{\circ}} 50^{\prime}$ s., aml long. $73^{\circ} 5^{\prime} \mathrm{WV}$. In 1S:jo, the place was almost lestroyed by an earthpaake, the cathedral and most of the other public buildings having hern thrown down. Still, how(ver, it numbers ibwut 10,000 inhahitants. ( $\therefore$, ur rallur its lunt Talcahnamo, ranks next to Valparaiso as a mart of foreign trade, bemor largely "ngrund in the "spurtation of hides and tallow.

CONCEPTION, Immacelates Ser Imaneldity Conceprion.

CONCEPTION OH OUR LADV, in order of mums, fownded in 1484, in honow of the immaculate conceptinn, by Buatrix de Sylvin, sister of James, first Count of Poralegro, in Portural. It was confirmed in 1489 liy I'ure lnnocent VIll., who grantel the sisterhood rermission to fullow the rule if the ristercians; but after the death of the fountress in 1489, Cardinal Ximenes $p^{\text {not }}$ the nums under the dircetion of the lranciseans, and inpused on them the rule of St Clara. The order shisequently spread into 1 taly and lrance. Ibesides the rand office of the Franciscans, the muns recite on Sundays and holidays a lesser office, callen the office of the Conception of the Holy Virgin. Their dress consists of a white gown, a blue mantle, and a scapulary, on which is worn the image of the Vingin.

CO'NCERT, a musieal entertainment of concertel $l^{\text {ieces, symphonies, \&u. smmetines inter- }}$ spersed with sougs, Ierformed by an orchestra of many instrments. C. perfomances are now estal. lished in almost every city in Europe, and societies are formed to foster and encourage the art. Among the oldest institutions of this kind are the Cewandhaus Concerts in Leipsic, estalilished in 1742; and the Concerts Spirituels in l'aris, estallished in 179.5. Of more recent institution are the mincurts of the Philharmonic Society in London, of the Conservatoine in Paris, and the Symphonic concerts in Berlin, \&e.

CONCERTI'NA, a musical instrument of moulern invention, the somuls of which are produced by free vibrating springs of metal, as in the accorlion. The scalc of the $\mathbb{C}$. is very complete and extensive, beginning with the lowest note of the violin, $\left(\frac{1}{x}\right.$, and ascending chomatically for threc-and-a-half netaves to. C. Violin music can lee performed on the C. with good effect. Ewery soumd in the seale is donble, aud can be produced cither by pulling the bellows opern. or by pressing them torevther. Wheatstone of Lundon is the inventor. Concurtinas are now made in France and Cicrmany, but not so perfectly as in England.

CONCERTO, a musical composition for a solo instrmment, with orchestral acconpaniments, calculated to give the performer an opportunity to insplay the highest mechanical skill, as well as intellectual eultivation in the art. The (. consists of three movements, each of which, like the whole, has a certain character, and like the symphony or the sonata, repuires a clear development and treatment of the motives, and a strict alherence to the rules of form. When the form is in any way abridged, it is then called a concertion. From the lieginning of the last century to the present time, the piamoforte and the violin are the solo instruments mostly used for the concerto. The ohkest violin concertors are those by Tartini and his scholars. The Frencly and Gurmans afterwards improted on these, aml fixed the forms, which all the great masters of wadern times lave adbered to. Immmerable concertos have been written for the fianoforte, amongst which compusitions of the most masterly kind are to be foumd. C'onecrtos for winl-instruments have
becn less mengmbed, and ate fenmally writen by the
 callall classical werins.

It is nun the knowladie of these relations that many of the conclusions of the geulurist are fundenl. In syatems of C... shells were asually divided intu
three orders, Iniralues, Biralues, and Multivalres, according to the number of prieces-one, two, or more-of which they are composed. The tirst two were established $\mathrm{by}^{\prime}$ Aristotle, the thim was added in modern times.

CO'NCLAVE (xat.), a word that denotes either the place where the carlmals assemble for the clocice of a pope, or the assembly itself. In virtue of the resolutions concerning the pontitical dection, acreed upon by the Conncil of Lyon in 127t, and which are substantially in force to the present lay, the C . must consist of a single apartment, having only one door, which is secmrely lockend after the entrance of the cardinals. The necessary food is lianded throngh a window to the meminers of the C., who are not allowed to leave the place until a new prope is chosen. As the C . is generally held in the balace of the Vation at lane, a number of little cells have been erected in one of the gralleries, at a short distance from each other. Each of thuse forms the lodgment of a cardinal for the time being.

A Conclutist is a spiritual or secular attendant on the cardinals during the election of a pope. He has to take a row of inviohable sidence, and is lut allowal to lave until the important basiness is concluled, except on the groumh of dangoronsillness. This affice is much songht after, hecunse the successful candilate for the papal clair gives each conclavist three or four hundred limes.

CO'NCORD, by English writers on monsic, is definel as the relation, hamony, or agrecment letween two or more consonant sounds; such as the mion of the major or minor thiml with the perfect fifth and octave. The German musical technology gives a wider meaning to this term, defining $C$. as every simultaneous sommling of tones, whether in single intervals or in complete ehords, and whether consonant or dissonant.

CONCO'RDAXCE, a book arranged in alphabetical order, aml shewing in how many passages all, or at least all the more important worls in any work oceur, for writings of miversal import, from which passages are continually leing adduced to prove or support principles affectines our daily life and action, such a hanti-lmok is intispensable. The uecessity of a $(\because$. for the Hible secms to have been felt at an early poriod. The tirst was executed ly Antonius of Jatua (b, 119.5, 1l. 1231), whes Inhlished it under the title Comondentio Momales. He was followed by Hugo de st Caro (12tt) and others, all of whom based their latmons on the Latin Gulate. A Greek C. loy Luthalios of fihodes was prepared about the bour 1:300, but has been lost. The Alexandrine " of the olld "I'estament was compiled hy Couran kivelace in the Jbth e., aml Xistus Vetuleins pmblished in lfti a $\therefore$. of the Greek New Testanent, which was remalisheal amd amended by Stephons in latot. In llebrew, a (.. was drawn up by liahbi lasatu Vathan, in 1438 , amendal ly Dlarins of Calassien Jiome, 1600 , hy John Buxtorf (1632), and by fiorst (ledp. IS37-1841). The chief eoneorlances for luther's translation of the Bible are those of lankiselı, Büchner, Wiclumann, and Sehotto F゚ur the inthorised linglish version of the lible, tha best $\therefore$ was compiled liy Aloxander Gomen, and tirst pmblishind in 17:37. Among the best editions of thas work wo may montion those hearines than datos 1510 amd IS'L. The C. of J'arallels, by
 Among semblar works of this linul, the Complde remmondence to shatheyetre, compiled by Mist ewhim Clarke ( L ambl. lal. $)$, is une of the most remarkal,

regarding the ecclesiastical affairs of a particular state, between the pope, as head of the Roman Catholic Church, and the temporal ruler of the state in question. The ordinary subjects of concordats have been the rights claimed by the Roman see to appoint to racant sees and benefices, and to appropriate the whole or a part of the revenues during the vacancy; to receive first-fruits and tithes from those chureh-linings to which it had appointed; as well as to confer on the clergy generally certain immunities from taxation and civil jurisdiction, and to offer an asylum to criminals. All these claims have been resisted, from time to time, by almost all the loman Catholic powers, and concordats have very often consisted in a remmaiation by the pope of some portion of these lis pretended rights. One of the most famous of the carlier concordats was that concluded on September 23, 1122, between the Emperor Henry $V$. of Germany and Pope Calixtus 11., which has ever since been regarded as the fundamental law of the Roman Catholic Church of Germany. Sometines the popes succeeded in arranging concordats which were favourable to the views; as, for pample, that between Leo $\mathbf{X}$. and Francis L., in 1516, which the parliament refused for two years to register, on the ground that by renouncing the right of the chapters to elect the hishons, the king had sacrificed the liberties of the Galhean Church. Since the middle of the $1 S t h \mathrm{c}$., concordats have generally been alverse to the popes. In 1741, Benerlict XIV. gave up to the king of Sarlinia loth the right of nominating bishops and of reaping the funts of the Sardinian benefices during the vacancies. But the most famons C. of this class, was that which Bonaparte, as First Consnl, forced upon Cardinal Consalvi as the representative of Pius VIt., on July 15, 1S01, which was ratified in Aprir 1502 , and has since rerrulated the relation of the Gallican Church to the Roman see. By this arrangement, the clergy beeame subject to the civil power, like laymen, in all temporal matters; and though the pupe in matters of discipline hat very large powers sceured to him, amel was still to confer canonical institution, the appointment to all the bishoprics was retained ly the government. In 1S17, Lonis XVIIl. coneluled a new C., in which he renounced the advantages which the civil had gained over the ecelesiastical power under Napoleon; but the arrangement was rexcedingly mopopmar with the nation, and in 1819 it underwent considerable molifications. Ahont the period of the Restoration, most of the other Poman Catholic states of Emrope comeludeal concordats, which, in consequence of the reaction then prevailing in favour of the chureh, wre generally in accordance with the principle of the $C$. of 1516 , and consequently more favourable to the pripe than the arrangements which they sulersented. With the revolution of 1S30, a current in the opposite direction set in, and the bapacy since has in general lust round on the oceasinn of evory new concorlat. But there has been one very fomous cxception in our own times-viz., that which was entered into loctween Rome and Austria at Vionna on the 1Sth of Aurust 1855; wheroby the llouse of llapshig surrendered to the Lionman ser privileges greater than had almost ever lufore lown conceded by a (icrman sovereign. In this remarkalle devemient, the fimperor Francis Jusph 1. promises that tha pone shall have direct communication, indurment of all surveillance by the civil power, with the hishops, clergy, and J"opld. In hate nammer, :welabishops and bishops are tolave free commmatation with their clergy and their forbs, and to do everything belonging to the government of their sees which tecorrls with canonidial liw. Under this latter liciul is comprised the
appointment of priests, vicars, and wher ecelesiastical officers, the estahlishment of smalle livines, the power to unite and dividu recturios, \&e. The whole system of national whation, eren in prisato achools, is placel under the rontrol of the charch. No one is to teach theodoy without "pisempal permission. In the gromasia, or higher grammarschools, mone lat fathalio professing are to lu. alluminted; and the hishons are to settle what hooks shall be used. The chiof inspector of schonds is, mo denht, to be chosen ly the ennuror, lint from ammeg the individnals sclucted liy the hishorss. The govermment binds itself ta breat the dissemination of looks pointerd out as dangerous tor religion by the bishops on archbishons. All questions of marriage, cxcept in so far as they involve civil consequences, are reserved exclusively to the ecclesiansical courts. The point for which the church contended at Clarembin (sce Cosstritutions of Clarexpos), is eonceded only in consideration of the times, and priests guilty of crimes are to le tried in the temporal courts; but the bishop must be duly notilicd of the fact, and it is provided that convicten priests shall be separated from eivil delinquents, and imprisoned in a monastery or othur ecclesiastical building. The emperor is to choose bishaps, but with the advice of the existing lishops and archbishops. As a proof of his extreme liberality, the pope grants the emperor the right of presentation to all livings, when the adrowson belongs to religious or educational foundations, on eondition that he choose one of three priests selected by the lishnil. The church may acquire new property, but once acquired it is inviolable-i.e., it cannot be solel or mortgared without the consent of both pope and emperor.

CO'NCRETE (Lat. concreseere, to grow together) is opposed to abstract (sce Abstractiox). A concrete notion is the notion of an object as it exists in nature, invested with all its qualitios, as any particular flower, leaf, or tree; an abstract notion is the notion of any attribute of that flower, leaf, or tree, such as its eolour, form, or height; rualities which may be thought of independently of the objects in which they inhere, though they cannot so exist. -The abstract method of handling a subject is adapted to speculation and reasoning; the C., to poctic effect and improssive illustration.

CONCLEETE, a mixture of hydraulic or other mortar with gravel or shingle, which, on hardening, forms an artuticial conglomerate. The best $C$. is matele ly well mixing hydraulic mortar (see Cement) with sand and suflicient water for complete hydration, and then adring the shingle or screence hallast, and mixing them well together. An inferior $C^{\circ}$. may be made by laying the shingle into the foundation or other place where the $C$. is required, and then pouring mortar upon it, to fill the interstices between the pebbles.

The primeiph use of $C$. is to form a basis of artificial stone for buidings that rest ulom loose ur damp subsoils. Such a lasis, if well male, forms a solid foundation-slab un which the weight of the whole structure is equally distibuted. It also resists the capillary ascent of moisture from the soil, which would otherwise take flace through brickwork or porous stone. A rery extensive and important application of C . in this manner has been made in the lower part of limlico and Thames Bank. An extensive district that, only a few years since, was a pestiferons marsh, is now covered with high class houses, and forms one of the fashionable guarters of the West End of London. The houses, and, in fact, the strects altogether, may be said to rest upon a sulstratum of artificial rock formed of C ., which, vesides giving stability to the buildiners, shuts
out the cxhalations from the soil, and prevents the asment of the moistme su abumant below.
(1) is occasionally used for builling walls ly ramming it into moulds, piving it the form desired. A very beantiful apdication of C. for making amsatic fomers is conmm in Italy. A stratum of cencont is Jaid, and the surface carefully lowelled; then Irbhles of varicgatel colnurs arr sifted over it; lefore it is quite hawlonel, these are laraten down, so ats to he imbolded in the cement, and form the tal layer. When the C has complately hardened, the rounded surfaces of the pebhlus are ground down ly means of a Jarge slab of stonc, whirh, tornether with sharp sand, is nubbed over the surface mitil it is quite snootla; and thas a variequat pavement is formal lay the flatencal surfacm of the coloured pebbes and the cement loctwen them.

CONCRETION, in Medieine, a formation of solid unorganised masses within the hody, either ly chomical precipitation from the fluids, or loy the aucidental asgregation of sulids introduced into the systen from without. In the former case, a C. is temed a Calculus ( $\mathrm{q} . \mathrm{v}$.) ; in the latter, the C. may be either wholly composed of solids fureign to the body, or these may br mingled with the clements of the secretions, as with mucus, ur calculous matter. Thus beans, pas, newdes, \&c., introduced into the cavities of the body, lave become the nuclei of concretions, ly attracting around them mucus, or crystalline deposits from the wrinc. The most remarkable forms of C., however, are perhaps thuse formed in the stomach and intestines of man and the lower anmals, from the more solid and indigrestible parts of the food, or of substances improperly swallowed. Thus, young women have been known to acquire the habit of swallowing their

Fig. 1.-Mass of hair and string from the stwmach of a young girl. Taken fiom the Pathological Sucicty's Rerort.
own hair to a great extent; and very large concretions have been thus formed, which have proved fatal, by obstructing the passage of fool. The anmexed cut (fig. 1) shews such a C., retaining exactly the

 praty： 11 any of these casses，the sulurno eonets
have a concurrent jurisdiction．＇－Stephen＇s Com．， v．iii．1＇3s3．By 19 and 20 Viet．c． 10 s ，s． 39 ，it is mroviled，that if，in an action or contract，the plain－ tiff claims more than $£^{2} 20$ ，or，in an action of tort （that is，for wrong indepembent of contract），more than $f^{5} 5$ ，and the defendant gives notice that he oljects to the action being tried in the county courts，and gives security for the amount sued for with costs－all poceedings shall be stayed in the county court．－Ib．note．

CONCU＇SSION゙，in Medicine，a sudden impresion or shock communicated to the brain or to the whole nervous system，as the result of a severe injury，or collision of the looly with some external object，as in a fall，or in the crash of a railway accident．It is usual to distinguish C ．from the more mechanical results of injury，ly ohserving its effect upon the circulation and on the general sensibility ；and there can be no doubt that the distinction is well founded， for in the first place death may follow from C．alone， without any appreciable destruction of texture； and olly，C．nay be followed by recovery within a few hours，leaving the local injury entirely unat－ tendet hy constitutional disturhance；or recovery may be complete，there hasing been wo local injury at all．Under the immediate shock of injury，the patient is usually unconscious and insensible，pale， cold，sometimes shivering，pulseless，or nearly so， the pupils inclining to contraction rather than dila－ tation，or in some cases natural；the breathing is irregular，slow，feeble，and sighing；the secretions are suspended；the stomach often yields up its contents；aml the bowels and blalder may also be eracuated．This state ends either in death，or in gradual re－action．which may pass over into a state of intlammatory fever，with violently excited circulation，and rreatly increased heat of the surface． In the treatment of C. ，it is sometimes necessary to have recourse to stimulants；but in general，moderate heat applied to the surface，abmodant supplies of fresh air，and careful aljustment of the injured pats，are all that is necessary till consciousness is somewhat restored，and the power of swallowing regancil；some warm soup should then be giren， with a small allowance of wine or other stimulant， rrirortioned to the age and habits of the individual； and the eflect boing carefully watched，this treat－ ment may be continued until restoration is complete． If there be danger of fallure of the breathing or heart＇s action，artificial respiration（see liesplRa－ Tons）should lee employed without delay；and the pationt shoukl he trausferred as soon as possible from the place of the accident to a warm and com－ furtable bed，where the necessary restoratives may be more convoniontly used．The counection of the nervous system with the heart，in cases of C．，is a very curions subject in physiology，and has heen the suloject of minute investigations hy Bichat，Legallois， Wilson I＇hilip，Marshall IIall，and many others．

CONDE，the name of several places in France， the following being the must important ：

Consme，in the departurent of Norl，situated at the amblene of the Ilame amb ficheldt，about seven milas north－north－cast of V゙alenciennes．It has an arinnal and strung fontilications，constructed by Viabsan．Its insportance made it tho scene of servial severe contests durime the Napolennic wars． It hits monnfatures of stareh，chicory，leather，and
 in the departmont of calvalos，at the mion of the burane and the Noirean，$\because=$ miles south－south－ west of（＇arm．It is an mhl place，with dark heavy homses．Its manufactues are cottons，cutlery，and
leather; and it has a petty rxtensive trable in cattle, honey, se. Pop. 6279.

CONDP, a family celdrated in French histary, and which takes its name from the town of Chmde (q. v.), in the departument of Nomb. One Comlfey de C., about the year 1200 , was in possession of a part of the barony of ('onde. 1lis great erandlangliter, Jeanne of C ., married in $1: 33.5$ Jacques de bimethm, Comte de la Marche, and the harony of (1. Went to their second sen, Lomis de Fourlam, Comes ile Veudôme, whose great-grandson, Lomis de 13mirbme, Prince of C ., in virtue of his hlood-relationship to the royal family, assumed the title of J'rince, and is regarded as the fomder of the now house of this name.
condé, louls de Bourbon, Prince lee, was born 7th May 1530, and first distinguished himself under Marshal Brissac. In the dissensions hetween the llonses of Guise and Bourbon, C. was the sonl of his party, which was for the most part Calvinistic or Huguenot. It was he who directed the eonspiracy of Amboise, which had for its aim the hanishment of the Guises, and the eapture of Francis 11. On its discovery, he fled to his brother at Nérac, and there projected a plan for securing possession of all the large towns of France, which, however, misearried, and C. himself was taken prisoner, and condemmed to be executed; from which fate he was luckily saved by the opportune death of the king. On the aecession of Charles 1 X . to the throne, C . obtaived his liberty and the governorship of Picardy ; but the barsh treatment which the lluguenots in gem ral received, drove him into rebellion; and on the 11th of April 1562, he commenced a eivil war by the capture of Orleans, Rouen, and other paces. Defeated and taken prisoner at the battie of Drenx, in the same year, he was employed by the vietors in conchuling a treaty of peace, which lasted only a short time. C. recommenced hostilities by a daring but unsuceessful attempt to possess himself of the person of his sovereign (2sth September 1567). After the Lattle of St Deuis, 10th November 1567 , a seend peace was concluded; but having reason to believe that Catharine de' Medici was plotting against his liberty, he once more renewed the war against the Catholie jarty, in the beginning of 1569 , but was again defeated and taken prisoner at the lattle of Jarnae, 13th Mareh of the same year. While his wounds were heing dressed on the field, a captain of the Swiss guard, named Montesquieu, approached, and shot him through the head. U. was of a joyons and amorous disposition. His gallantries were far from being in accordance witb the austere character of the religion he professed, and it cannot be donlted that the feeling of political rivaliry to the House of Lorraine, which animatel the Bourbon family, explains the career of C . quite as much as his religious convictions.

CONDE, Louts II. of Botrbon, Prince of, commonly termed 'the Great Conde', was the great-grandson of the preceding, and was horn September 8, 1621. In youth ( $1640-1642$ ), lee took part in the sieges of Arras and Perpignan, and commanded the army against the Spaniards in the Netherlands, where he almost extirpated the foe in the battle of Rocroi, May 19, 1643. In the antumn of the same year, he was sent to Alsace to support Turenne; and in the engagements of August 3 and 5, 1644, he defeated the Bavarian general Merey near Freiburg, and so won for Franee a considerable portion of Germany. By the death of his father, 1646, C. became the head of his family, and, next to the Duke of Orleans, was the highest personage in the state. This pre-eminence excited the envy of Cardinal Mazarin, who, however, in 1648 , intrusted

ㅇ. with the command of the army in the Netherlands. Ifere the prince captured lopres, and gained the hattle at Soms, lout was callom back to Paris by the war of the Fromle ( 4 . v.), which had just hroken ont. In this content, 1 . at first sillel with the court, while his brother, Primer of Conti, and his sister, the celehraten lhachess of Lamuevilhe, touk the part of the firoulowrs. After the court had
 conclailed a treaty which insureal the rotum of tha conrt to J'aris in Angust of the summ year. But as this sorvice met with no iulequate thinks, $(\because$, , whw was the haughtiest Fremehmat of his age, soon hreame more vindently retellions than the Frondons thamselves, at least in his language and hepertment. Cardimal Mazarin conseduently arrestod (1), with has brother and the luke of Longucville; hat was soon conpelled to release him, on aecomen of tha. threatened operations of Turenue aud the Frond:Thongh (. now wayod the favour of the peopl., his relations with the court were unficundly even after Mazarin had heen lanished, and when Lomis XlV. assumed the goverument, loan. He therefore renewed the war, with, as some suppose, the ambitions view of obtaining the supreme power. At the head of troops collected in the Netherlands, he gained the battle of Ihenean, in April 1652, and immediately marehel upon I'aris, whike Turenne, who had remained steady in his loyalty, advaneed to defend the court. A blooly but indecisive struggle took place in the streets of Jaris. Many of Ca's aldest adherents, however, were killed, and the Fronden's legan to give in. A treaty was drawn up, to which most of them agreed, hut the prond impracticable C. would have nothing to do with it; furious at the defection of so many of his frients, he went into Champagne to gather troops, and after a fruitless effort to seize Paris, he left the country, and, on the formal outbreak of war between France and $S_{1}$ ain, became generalissimo of the Spanish forees, lout was mable to gain the adrantage over Turenne. When the peace of the Pyrences was conchuled between France and Spain, it was thought advisable to enter into friendly relations with the brilliant traitor. C. was therefore pardoned, and reinstated in his former honours. The war having been renewed by Spain, 1673, he aqain commanded the Freuch in the Netherlands. Nifter Turenne's decease, be held the command in tiermany, lut was ultimately so disabled hy gout, that he had to resign his post. He now retired to his estate of Chantilly, where lie devoted his remaining years to literature (for which, in his early years, he had exhibited a strong $\eta^{\text {redilection), the society }}$ of friends, and religious exercises. Ite died at Fontainhleau, December 11, 1656. The I'rince of $C$. hat a superior intellect and great strength of eharacter, assoeiated with pride. Though an able commander, he was disiiked by the suldiers, on aecount of his severity.-Mahon, Life of the Great C'onde (184).

CONDENSER, the apparatus used in conjunction with an electrometer to increase its sensibility, and render it available for indicating the presuce of very feehe clectricity: A $\therefore$ of the simplest form is shewn in the aceompaying figure. $A$ is a gnldleaf eleetrometer. 'tho eoudensing aplaratus consists of the two lurass plates, l: and 6 , which are placed

Condenser. horizontally, the lower one beiug connected with the wetal rod to which the gold leaves are attachen,
and the rppor one being provided with an instlating class handle. These plates are aceurately grouml, the one to the other, so that when placed mon each other, they touch in every part. Their iuner surfaces are curered with a very thin and equable lafer of shell-lac. When an observation is male, the excited body is brought into contact with the lower plate, and the tinger of the observer is laid upon the upper. This being clone for a sufficient time, the finger is tirst removed, and then the excited body, after which the plate C is lifted liy its handle parallel to the other plate, the gald leaves at the same time diverginy mader the intluence of the electricity left in the lower plate. The same observation might have been wale with the positions of the finger and the excited body reversed, but the leaves would then be charged with the opposite electricity to that of the excited budy. Leverting to the first case, the electricity to be tested is communicated to the lower plate in small suceessive charges, which, acting through the thin layer of shell-lac, induce as in the Leyden jar, a comesyonding charge of the opposite electricity on the lower surface of the mper plate, and send the similar electricity of the ruyer plate through the finger into the ground. Each weak charge of electricity given to the lower plate is not allowed to dissipate, but is lepet fixed or bound by the corresponiling charge of the opposite clectricity which it has induced on the upper plate, so that au accumnlation of such charyes takes place. As yet, however, there is no excitement visible in the gold leaves, the electricity so condensed in the plate 1 b being capable of acting only in one direction-viz., towards the charge of the upper plate. When, however, the plate $\mathbb{C}$ is removed, the collected electricity of the lower plate leing wo longer restrained to act towards it, immeliately extends to the leaves below, and canses a marked divergence. In this manner, electricity of too low a tension to affect inmediately the golil leaves can lue cundensed, so ins to possess the power of doinct so.

It is form that the effieiency of the C. depents upon the accurate grinding of the plates, the thinbess and evenness of the layer of shell-lac with which their inner surfaces are varnisheal, the size of the plates, and their parallelism on removal. This last is of the utmost importance; amb it is fonml, where numerical results are wantui, that little devenulence can be placed on the parallelism attainal by the hani. For mure accurate ubservations, the C , is minle quite separate from the dectrometer. 'I'le plates are in this case attached vertically to two woxlen pillars, on which they are insulated, aml whicll slite in a horizontal groove made in the sule of the instrument. The plates, thus gumbel ly the grombes, are matle to approach anl to retire from cach other with their faces parallel. In a (. of this leseription, no shell-lace varnish is usnd, the air Jutwen the plates acting as the dielectric in its place. When one of the plates is connecter with the knob of the clectrometer, the ubservation puownls as alrealy dutailed.
('ONDENSINGSTEADI-ENGINE. Seestesm-上.

 uf the fuets, acomumaitil with a mote of the grounds in linw on which the puranor uf an action rests. Finmorys, the 1 ' was a saparato plembine from the -rimmonse ur juileial writ by wheh the defender is vallad inter conet. liy the forssing of $1: 3$ and IT Viet.
 Jinthafurd's. Det, the forms in Sicotlanl were very sumbermphited. The summens, in fhece of eontaning
a ranbling statement of the grounds of action, which was afterwards to be rendered articulate and explicit ly the $C$., is now a merely formal writ, setting forth the narme and desirnation of the pursuer and ilefender, anl the conclusions of the action. To the summons, howerer, is appended a $U$. setting forth the rrounds of action in articulate statements, and to this again is subjoined a note of pleas in law, so that the whole case of the pursner is contained in the very first pleading in the canse. The papers on both sides may be revised if necessary; and the record, as the written plealings and productions are called, is then adjusted by the judge. The cause is now ready for Debate (q. r.).

CONDESCENDENCE AND CLAIM. See

## NICLTPLEPOLNDING.

CONDILLAC, Etienne Bonnot de Mably de, a French philosopher of the 18th c., was born at Grenoble, 1715. In early yonth, his delicate healtin delayed his progress in education. In 1746, he published his Esaai sur l'Origine des Conneissances Humaines, a work which derives all thought and knowledge from the exercise of the senses. It was intended to carry out the principles of Locke, which were mismblerstoud and misrepresented by C. as entirely based on sensationalism. To refute various metaphysical theories, C . wrote a Traité des Systimes (1749). In 1754, appeared his Traite des Senvations-a work supllying the details of the sensational theory. C. supposes a statue organised within like a man, but its body-so to speak-being composed of marble, hinders it from possessing any sensibility. C. further supposes himself to bave the bower of endowing the statne with one sense after another, antil it becomes perfectly a buman being, and so endearours to shew that as it would then possess exactly the same kind of iuleas as ourselvesand yet while destitute of sensations, possessed none -it logically follows that ideas spring exclusively from sensations. In all his writings, C. displayed aenteness in analysis, and as consistently as was possible, adhered to the extreme theory of sensationalism. C. passed his life mosily in quiet retirement, and died at lis estate near Beaugenci, Angust 3, 1780.

CO'NDIMENTS, or seasoning agents, are those sulistances which are employed at table for the purpose of imparting a flavonr or seasoning to the ordinary solid or liquid fwod. The greater part of U. are necessary to sustain the proper functions of the alimentary system, and besides gratifying the appotite, minister, more or less, to the wants of the structure. The principal C. are saline substances, such as common salt; acilulons bodies, such as acetie acil or vinegar ; oily C., such as butter and olivewil ; sacelibriuc substances, snch as sugar and honey; and aromatie and pungent $\mathbb{C} .$, such as mustard, winger, peplur, amb pickles. The members of the lust eliss owe their characteristic properties to the prescuce of a volatile oil or resim.

CoNID"THON, in Lonic, demotes that which must precede the operation of a cause. It is not regarded as that which produces an effect, but as that whinh renders the paduction of one possible. For instance, when an impression is made on wax by a seal, the seal is sail to be the cause ; the softness or tlunlily of the wax, a condition. Some logicians, howerer, are of opinion, that the distinction usually

## CONDITION. Go 'Thalving.

CoND)TOON, in daw. This worl is of peculiae importance in the real poperty law of England, as forming the fommention tuph which the right of alienation of latad, as well as the system of entails and that of mondgates was raised. Originally, a
gift of an estate to a tenant (or vassal) ly the lord of the fee dill not convey more than a life-estate; and when a gift was made to a man and the luirs of his body, it was held that it was a giit upon (? that he had heirs of his lumly. But if the $\mathbb{C}$. was derformed by his having chaldren, although they might atl die before his own death, the juitues helid that his estate lecame absolute, to the whet that he might aliene the land, and so har not merely the succession of his issue, lut the right of the lurdi in defant of issuc, although, if he did not alicne, the lord would recover in the event of the tonant's death without issue. Lut it came afterwarels to be beld that io gift to a man and the heirs of his body conferred what is cailud an cstate tail, which might at once, by certain forms, be converted into an absolute estate, independent of the birth of issue. See Estate Tail.

A mortgage is an estate given to the mortgagee upon C. that he restores it upon payment of a tixed sum borrowed by the mortgager. This is an example of an estate upon C. expressed. An estate attached to an office is an estate in the holler of the office upon C. implied, that he shall prerform its duties. A U. may also be either precedent or subsequent. In the formor case, the gift does not take cffect until the C. is performed; in the latter, it beconnes void when the $U$. occurs. The right to take advantage of a C. subsequent camot be bestowed on a stranger, but can only be reserved to the grantor and his heirs, though after such reservation it may be assigned to a stranger. Conditions which are incapable of performance, or contrary to law, are void; and if such a C. is precedent, it makes the gift void; if suosequent, the estate becomes alnsolute in the tenant. But if a C. become illegal, or impos. sible, subsequently to the making of the grant, it has a different effect, according as the effect is produced by statute or lyy other circumstances. If by statute, the party bond to perform the C . is relieved from it; if by other circumstances, he loses his right, as being unable to perform the condition.

In contracts, conditions which are mala in se render the contract roid; but it is otherwise if the C. is merely opposed to an arbitrary rule of law, in which case the C . only is roil, and the contract subsists. In legacies, a similar rule prevails. But in the case of legacies, a C . impossible of performance is generally taken pro non scripto-whereas in contracts, it commonly annuls the claim of the party who has bound himself to its performance.

CONDI'TIONED, The Philosophy of the. This phrase has been brought into use by Sir WV. Hamilton, to express the inability of the buman mind to conceive or reason respecting the Absolnte and the Infinite. Our thought, according to him, can only be of the relative and the finite, of which these terms are but the negations; relativity and finitude are the conditions under which the human intelligence operates. In a dissertation on this subject (Discussions in Philosophy, ]. I), he criticises, and endearours to refute the oprosite position as maintained by Cousin-a modification of the previous doctrine of Schclling - that the Unconditioned, the Absolute, the Infinite, is immediately known in consciousness, and this by difference, pluality, and relation.'

As this doctrine of Sir W. Hamilton bas loeen raisel into an especial importance by Mr Mansel in his Bampton Lectures, some account of the reasonings addnced in its favour may here be given. We shall first quote the author's own statement:
' In our opinion, the mind can conceive, and consequently can know, only the limited, und the conditionally limited. The unconditionally unlimited, or the Infinite, the unconditionally limited, or the

Absolute, canme positively be construci to the mind; they can lo conceived only by thinking away from, or abstraction of, those very conditions under which thaneht itgelf is realised; consequently, the notion of the Inconditioned is only neyction-argative of the conccivable itself. Fur example: On the one hand, we can positively conceive neither an absolute whole, that is, a whole so great that we cannot also concerive it as a relativo fart of a still greater whale; nor an alsalute part, that is, a bart so small that we canuet also conceive it as a relative whole, divismbe into smaller parts. On the ather ham, we camont positively represent, or realise, or construb to the mind (as here Understanding and lmagination coinciles an infinite whole, for this could only be done by tho infinite synthesis (union) in thought of finite wholes, which would of itself require an infinite time for its acconplishment; nor, for the same reason, can we follow out in thought an infinite divisibility of parts. The result is the same, whether we apply the process to linitation in space, in time, or in decree. The unconditional negation, and the unconditional aflirmation of limitation ; in other words, the Ingmitc and the Absolute, zroperly so culled, are thas equally inconceivable to us.'-Discussions, p. 13, wi edition.
The fundamental ideas involved in this vicw are certain olsserved facts with reference to the human mind, or the human consciousness; which facts, although very much overlooked in former times, are now beginning to be 1 retty generally recognised. It is a general Jaw of our mental constitution, that change of impression is essentiai to conscionsness in every form. The remark was made by Hobbes, that it is 'almost all one for a man to be always sensible of one and the same thing, and not to he sensible at all of anything.' There are notable examples to shew that an unarying action on the senses fails to give any perception whatever. Take the pressure of the air on the surface of the body. Here we have an exceedingly powerful effect upun one of the special senses. The skin is under an influcnce exactly of that nature that wakens the feeling of touch, but no feeling comes. Withdraw any $\mathrm{p}^{\text {rotion }}$ of the pressure, as with a culping glass, and sensibility is developec. A constant impressin is thus, to the mind, the same as a blank. Our partial unconsciousness of our clothing is connected with the constancy of the oljject. Remissiun or change is, therefore, absulntely requisite in urier to sensibility.

The necessity of change in orter to prodnco feeling or conscinusness of any sort, must alyly to the special kind of conscionsness that we call knowledge. To know light, is to pass from its presence to its absence, or the ofrosite; everlasting, unvarying luminosity, in ais eye always awake, would not be known to the hman minil. It is transition that develops knowledige, whence flows the important conserpuence, that knowlence never can be of one property alone; there must always be at least twn lrolerties in every act of knowing. We may say that we know linht; but in so duing we also know darkuess, and we could not know either Iny itself. When we touch clay and marble, we know hatd and soft; but if wo had never tomed a soft holy. we shombl have no conception of a hard one. Living in one constant temprature, hike the tish in the truical seas, wo shunk know neither beat nor cold; passing from a high temperature to a luw, or from a low to a high, we know louth; and such is the alternatire presented in every case to the haman understanding. This great fundamental law of the human mind is now cormonly designated by the 1hrase, the reletivity of knoudellye or of cognition.

Mr Mansel, accordingly, disputes the possibility of our concerving the infinite, by shewing that such a conception passes the limits of human consciousuess. The fullowing extract will shew his mode of reasoning: 'Now, in the first place, the very conception if conscionsness, in whatever mode it may be manifested, necessarily implies distinction befucen one object and anothers. 'To be conscions, we must be conscious of something ; and that something ean only le known as that which it is, by being distingushed from that which it is not. But distinction is necessarily limitation : for, if one olject is to be distingnished from another, it must possess some furm of existence which the other has not, or it must possess some form which the other has. But it is obvions that the infinite cannot be distinguished, as such, from the timite, by the absence of any quality which the fimite jossesses: for such alsence would be a limitation. Nor yet can it be distinguished by the presence of an attribute which the tinite has not; for, as no finite fart can be a constituent of an infinite whole, this differential characteristic must itself le infinite, and must at the same time bave nothing in common with the finite. We are thas thrown back uron our former impmssihility. .-L Lecture 3].

A secnnd characteristic of conscionsness,' according to Mr. Manscl, 'in, that it is omly possible in the form of a relution. There must be a Subject, or person conscious, and an Object, or thing of Which he is conscions. There can be no conscionsness withont the umin of these two factors; and, in that mion, each exists only as it is related to the other. The sulbject is a subject, only in so far as it is conscions of an object; the object is an object, only in so for as it is apprehended by a sulject ; and the destruction of either is the destruction of conscionsness itself. It is thus manifest that a conscionsness of the ahsolnte is equally self-contradictory with that of the infinite. To be conscions of the absolnte as such, we must know that an olject which is given in relation to our conscionsness, is identical with one which exists in its own nature, out of all relation to consciousness. But to know this identity, we must lue able to compare the two together; and such a comparison is itself a contratiction. We are, in fact, reguired to comprare that of which we are conscious. with that of which we are not conscions, the comparison itself leing an suct of conscionsness, and only jossilule through the conseiousness of both objects.'

The author then lays down a thirl condition of conscionsness-namely, relation to time. Everything ennceived hy us is conceived as under the two manifestations of surcession and durction, from which heendeavours to shew 'that an act of croation, in the highest sense of the term-that is to say, in absolntely first link in the chain of phenomena, preceded by no temporal antecedent is to hmman thwught monceivable. To represent in thought the first act of the first canse of all things, 1 mnst eonceve myself as placed in imagination at the forint at which tomposal sucerssion commonees, and as thas conscious of the relation leetween a phomomenon in thme and a $1^{\text {hemomenon ont of }}$ time: Pat the consciousness of such a relation implins a eonscionsuess of both the related mernburs; tu realise which, the mind must be in and Git of thme it the same momont.

Ansl, furthor: "Suburlinate to the keneral law of time, to whinh all eonscionsness is subject, there are kwo inforior conditions, to which the two nroat rlavionos of renasiousmess are sevomally sulijoct. (hat kaw dentre of luyly is governed by the eondition
 alify I can concerive no yualities of body same as
having a definite local position ; and I can conceive no quatities of mind silve as modes of a conseious self. ${ }^{1}$--Lecture 31 .

By the application of those four conditions or limitations of the human conscionsmess-distinction, relation, succession, and duration in time, and personality as regards the eoneeption of mindit is Mr Mansel's furpose to demolish the fomdations of the metrphysical theology of former ages, which was largely conversant with proofs i priori of the infinity and the absolute existence of a Deity. Accorling to him, a rational theolory is impossible to be attained. 'Our whole conscionsness manifests itself as subject to certain limits, which we are miable, in any act of thought, to transgress. That which falls within these limits, as an oliject of thought, is known to us as relative and finite. The alsolute and the infmite are thus, like the inconcerable and the imperceptitle, names indicating, not an object of thought or of consciousness at all, but the mere alisence of the conditions uuder which conscionsness is possible. The attempt to construct in thought an olject answering to such namos, necessarily results in contradiction-a cortradiction, however, which we have ourselves produced by the attempt to think-which exists in the act of thought, lut not beyond it-which destroys the conception as such, but indicates nothing. concerning the existcuce or non-existence of that which we try to conceive. It proves our own impotence, and it proves nothing more.'

CONDONA'TION, in the legal phraseology both of England and Scotland, means forgiveness, or remissio injuriaram, when mrged as a defence against an action of divorce on the ground of adultery.

CONDOR (sarcoramphus gryphas), the great vulture of the Andes, and the largest of known flying birds. Its dimensions, however, were for a long time greatly exaggerated. It is not always much larger than the lammergeyer of the $\mathrm{AI}_{\mathrm{ps}}$, heing sometimes not searcely more than four feet long, and its expanse of wings abont nine fect, althongh these dimensions are often considerably exceeded, and the expanse of wings reaches fully fourteen feet. The wings are long, and extremely powerful; the tail short, and wredge-shaperl; the general eulour btack, which is brightest in old males, the youmg locing of

Head of Condor. a brownish colour, which has given rise to a notion that thure are two species; the males are atso distinguished ly having great part of the wings white. Around the lower part of the neck of both sexes there is a broad white ruff of downy feathers, abowe which the skin is lare, and exhibits many folds. The head of the male is erowned with a large cartilaginous comb, and the neck is furnished with a dilatable wattle. The beak is thick and strong, stribight at the liase, but the upper mandible strongly curred at the extremity. The C. forels mostly on carrion. Its voracity is enormous. T'schuli nuentions onu in confinement at Valparaiso which ato 18 lbs. uf ment in a single day, and secmed next day to have as goun an appetite as usual. Condors oftem gorge themselves so that they cannot fly, and if attacked, must disgorge in ordir to escape. The metal in this case I mads away the elece ricity into the lonly of the experimonter, and thence into the [rami, whore it hechmes lust, ame it receives in comsengence the wam of a comberne. 'The whell tace for the whasite reasm, is calloni a maneonductor. Difforent subataces are fomme tolussess the puwer of condactind electricity in very lifferent dearees. The following series diassifies the mare common sul, atanes aceratins to their coubucting fowers. hevinume with the hont, and anding with the worst comblactors. Combucters- The metale, graphit: sea water. sjping-water, rain-watur. Semi-contuctors-Alcohot and ether. dry wool, marble, Ialer. straw, ice at in F. Nou-conductors-Iry metallic oxdes, fatty cils, ice at $-13^{\circ}$ F., Ihosphorns, $^{\text {hos }}$ lime. chalk, camotchone, camphor, porcelain. leather, Ary pajer, feathers, hair, wol, silk, gems, glass, agate, wax, sulphur, resin, amber, shell- lac.

The armangement into embluctors, semi-contuctors, and non-contuctors, is made with reference to frictimal dectricity, or electricity of a high tension. The suhstances which are scmi-contucturs for frictional clectricity are found to lie almont, if not altogether, mon-conilucting for the electricity of the galsanic lattery, which is too feehle to force a passage through them. The metals, which apmear to be all n arly alike couducting for frictional eloce tricity, offer widely difforing resistances to the transmission of the galvanic current. By exproriments make with galsanie electricity, it is femm that the more orimary metals stanithus, as regards their powers of conlaction, heqiming as hefore with the best conluctor: siluer, goll, conper, hrass, zinc, iron, flatinum. tin, wekel, leal, German-silver, nercury, An increase of temperature has in the metals the effect of lesseming the conducting bawer, whilst in almost all other sulustances it has an opposite effect. Glass becomes combucting at a red beat, and so do wax, sulphe, maler, and shell-lac. when fuser,

When a combetor is placel on an-combuting supports, so as to prevent the electricity commanicaten to it from passing intu the fromi, it is said to be insulated. The nsual insulating material employel in the construction of electrical apmatus is glase, which, though not so perfect a mon-emductor as the others lower in the seale, far exceats them in harlness and durability. In a lamp atmosphere. glass lecomes coated with a thin layer of mbisture. which very considerably diminishes its insulating power. llence arises the necessity in certain states of weather of heatina so as to dry all electrical apraratus previons the ase. This imperfection is very much lessened by covering the glass with sheithe varnish,

The wry fact that a commetor may be insulated, indicates that the air is anom-combutor. Dry air pussesses this proputy in a hinh deurve, whike most air renders insulation for any length of time impossible.

CONE (wombus), in Eotany, a fruit-hearing sible eoveren with scales, able which has two sce to at its base. Such are tho fruits of the Comifore (bircones or fir-topes, from the usial shape of which the name $C$. is derived, also the frnits of the Cusuctiner. The name $(\%$ is applime also tu the fumale spitic. wen when in Hower. The sealu of trua comes, mentil they seprate to allow the dispuraion of the secols, are elosely compacted tomethor: in th. hop, to the fruit of which the nome C. is mit apphent, atthoush strobilus is, they are loose. Stame tria comes is those of the inoucario, are very far from bund comieal in shape. The fruit of the junisur (a (fullumens) is a (C. of which the scales have Income theslyy, so as th form a false leerry.

COSE. There are varions kinds of cones, hat the term is namily apheal only to thase having cirmbar bases. The most common kind of circular $\because$ Os the right C. which may be conceiver as heimf semoratell by the rewhtion of a richtampled triansle Fmmence its le"s. The line from the anex of a (.) the the centre of the lase is calleal the axis, ame
 the whinge C., the :xis is inslinel to the plame of the hione at an ansk other flam a rimat anche A tromental (\% is the lawer part of a (d. ent by a fan bamblat the base- Pour chaves, eablem
 tha Hisht © in rificurnt directions. If the ! S le cut ley a palase pranthe to the base, the section is at cimbe.: if the phane cat the (: arross, makin! any angle wher than a righ angle with its axis,
the section is an ellipse; if the catting llane be parallel to the side of the C., the scetion will be a baralwh. In every other case than those stated, the section will be an hyperlola. If two cones were set one alowe the other, the one boing just a contimuation of the other throngh the ajex, the plane producing the byperbolic section wond ent the secoml as well as the first, though none of the other planes would. There are thus troo equal branches of the hyperbola belongins to the two cones respectively. See Cifele, Parabola, \&c.

CONEALLA'KO, a town of Nortbern Italy, IS miles north-ea-t of Venice. It is situated on a hill-slope, crowned by an extensive castle, and has a very picturesque appearance. Half-obliterater frescoes adom the mitsile of sereral houses in the town. C has numufactures of woollens and silks, anl a population of hato.
(OONE-SHELL (Conus and Conike), a gonus and family of gasteropodons molluses, of the order Pectinitranehinte, having a shell of remarkahly rembar conical form: the spire an the lase of the cone, ant? smetimes rising from it t, a sharl beriut sometinus ahmst flat; the aperture narrow and straight, without protulerance or fold. extending from the base of the cone to its apex. The lead of the animal has a proboscis capable of much
 extension: the mantle is scanty and narrow, forming an clongated siphon in front: the shell covered with an endermis. These molluses are carniwurons, they inhabit shores and banks of sandy mud, chicfly within the tropies, a few only oceurring in the Mediterranean. The shells of many species are very beautiful, and much prized ley collecters.-Cune-shells first aprear in the chalk, and lipcome mose alommant in the more recent formations.
GONEARTABATION was a peculiar mode of marriuse in usc among the Fomans, and supposed to have been mimally that mactised by the patricians. Its specialty consisted in the employment of certain wods in the presence of ten witnesses, and in the performance of a religious ceremony in which mentis fiermus (lreai made of spelt) was used. Various juricstly uftices, such as that of the Flamen Dialis, were open inly to those who were born of parents thus married.
(ONFEDERA'tion, Gemantc. See Germany. CONFEDERATLON OF THE RHINEE. Durins the war of 1805, so disastrous for Austria, several German frinces, too weals to remain neutral, Ware forcel do ally themsilves with France. The first to do so were the Electors of bavaria and Wiirtembers, whe, in recompunse of their services, were mevated to the dignity of kings ly the peace of I'resharg Obth December 1S05, Sume months after (2sth May 1sug), the arell-chancellor of the -rupire anmoneed at the diet that he hal chosen as his cominator and snecessin Cardinal Fesch, the mele of Napulem, it thing entirely contrary to the comstatution of the formanic cmpive Finally, at Paris on the lith buly 1806 , 16 German primees formally sigmel an act of confoleration, dissolving their comnction with the Germanic empire, and allyine themselves with Franee. These I6 prinees were the kings of Inivaria and Würtemberg, the arhechancellor, the Ehetor of laden, the now Duke of (leves ami berg (I Uachim Mhrat), the Landgraf
of Ilesse-Darmstudt, the I'rinees of Nasman- LTainmen,

 Dukn of Arember, the l'rimees if Inembinerg birstion and levehtenstein, and the ('munt of 1 ary. Th. These individuals justified (or were formal to justify) thar comblact ley enmmeratines the vies of tho constitution of the dermanio conpire, and inviterl the remaining princes of Cimmany 10 imitate then example. At 1 lo same that. lhacher, the jrenela ambassador, sleclared that his master mo lomere recogniscal the dermanies empire ; while the territorio's and titles of the confalerate promes (wla were mow moler the protectorate of Napmlems) moluwint considerable chantes. la whliton th these changes, a number of other princes and moldex of the empire were made dependent (sae DEDItThanow ) on the confederation. Durmer the years $1806-1508$, several other petty German soverelips, alamed at the triumples of Napleon, hastencil ta enrol themselyes memburs of this mpatriutic leagne: and at the close of 1808 , it embruced a territory of 100,236 square miles, contamer a jopulation if $14,608.875$ souls, and kept up an army of 119,150 men. The utter ruin which overtomk the French army in the Fussian campaign acted like a solvent on the eonfuderation, and the year 1513 s.rw it vamish like mist in the suduen outburst of German patriotism, when a whole peuple leaper n] as whe man, and delivered themselves from a cruel and insultiug bondage.

CO'NFERENCE, in English Law, signifes the interview of an attorney or solicitor with a comusel. when consulting lim. Consultation jreperly means the meeting of barmisters with each uther.

CONFERENCE, WEsheyaN. See Wesleyal Metioneists.

CONFE'RVA, a genus of plants of the natural orker Alow, sub-order Conformecte (or mar Conforracea). The plants of this gemus comsist of simple or branching jointed filaments, which are tilled with green-selhom purple or red-mattor, and ure found in abundance in water-some of them in fresh, and some in salt watur-anl on moist carth. Crivularis, a species common in brombs, is somutimes 2 -t yards in length, and was formerly usen

It womblamost suem as if no such structure had been used, as there is an oll painting ou the walls of 'it Mary's C'hapel, Wiuchester, in which a wuman is represented knepling to a pricst, who is seated in his stall. Continental confessionals very much resemlide sentry-boxes, having a door in front for the priest to euter by, and an opening ou one or hath silles, like a small window, for the penitents to speak tlurough.

## CO'NFIDENT PERSON゙. Sec Insolvercy.

CONFIDENTIALITY, in Law. The most comnom instance of $(1$ is in the case of those communcatims letween a chent and his legal adviser, which neither of them ean be called on to produce in a suit, ami umu which no action of damages can be fommel. The privilege extents to letters written by the lawyer to his client, relating to a suit which is cither pendins or contemplated; but to what extent it curers uther bosiness commmications, is a question on which there are coutlicting authorities in Scothant. In Earlam, the rule has received a liheral ioterpretation (Hickson on Emilcace, p. 930). The same privilege is extembed to the commonicatims of several inaties, or of their counsel and arents envagel on the sane sile of a cause, and made with a view to their joint poscention or defence. Where a party, placed in such circumstances, is examinel its a wituess, he will be entitled to decline answerines puestions as to such communines, and eren homm to for so, uless the privilege is waval ly the other party interested (1)icleson, 1. (124). The principle on which this pri. vilege restes, as stated ly stepheo (Com. iii. 466), is that these commmiations are made on such lawful nevasions as tomit to rebut the mimi ficie inference of malice, which otherwise arises from a statement duratory to private character.' It is on the same minciple that a mastor is putected who, when called upun for the character of a servant, charges him with a theft. In such casts, in onder to support an artion, there must he prow of malice heyond the uttering of the worls. With a siew to preservins the freenm of domestic intercourse, and from a frelief that the tostimony of near relatives in favomr uf each wther was worthless, anl that the only vfloct of examining thrm against each other was to tempt them to commit perjury, it was formerly the lu:lut to rejeet them as witnesses. The temlency in Ensland, fur a lons time, however, has been to admit, amb ewn to exact their widence, making allowance, in appreciating its valu, for the cireumstances in which they ary placed. The same principle has latterly lanin follawed in Soutlaml; and the only exceptions which have been retaingl hay the law of Evidence Anmmame let of 1 sis ( 15 and 16 Vict. c. 27 ), to the wow :hmost universal iulmissibility of witnesses, arw, that mother the pardies themstlyes, nor their luntamis or wises shall le competent or compellabl. Whar vinduce in criminal procectings in whill they are imensel, nu to :mswer ynestions in a civil suit fombine to riminato thanslves or each other, of to reval maltors which they have commanerated to each other dermes marrase. The C . of sum remmanieations romains alfhough the: mariage has hed dissolved by death or divorce

Prom very corly timm, so corly, it is said, as the Ath and the renturime the 'seral of Confession' (rimillum rompissiomia) was herd to the inviolable, and no print cond lo callol upon, muder any circumstanes, to reveal facts which hial been conblend to him mader its stuction. To this the ease of treasan was an exeeption, in Eughand, even

 leges of the confessimat remmin matemen; and several of the Protestant churdua of Ciomany lavine sanctioned the practero it anforsinm, the privilege of secerer has lana atemind to it, as as
 states, however, in matition to infme for lifhtor

 which the confessiont has raforme that fitum erime.

 as to how fur a confession made to at ehereyman for
 consalation is protectim, semms mulowhed. In the
 evidene thmered comsisted of conversations relatin" to the subject of acensation luetwora the acensel and the rhaphan of a workhouse: :mint the junten expesseal se strons an opinion arsinst it, that it was withorawn. In scotlamb, as in Enctand, the pint has never lem directly or shmmly anden, © vidence of the kind in question, when not implispensalle fur the enls of justice. being g a rally cither withheh or withetraw (lhekson, ii. p. !ash). Ly a statute of the state of New York, l nitel States, miniters of the Co-p.land priests of every ilenomimation, are forbiden to diseluse confessinis mate to them in their professimal character; and at similar statute exists in Missmuri. It has luen demided in Endam, that commmications to a medical man, wen in the strictest professional conldance, are nut potcetel from disch whe (Best, 73H); and the sane is the case in Southand (F.ckson, ii. p. !-41); but a contrary rule has been alopted in several of the states of America ( 1 (freenl., s 245, nite).

CONFIRMATION, in English Law, is where the party having right to lami, grants to the party having possession that whoch is in him. Contirmatim, in scots law, is the from in whicla a title to alminister is conferred on the execontio of at ersm re cased. It must be gone through, or 'exprale, b) fure the commissary if the distriet.

CONFIRMATUON, a Latin wowl which signities stompthang. lu the ancient charels, the rate so named was alministered immediately after baptism, if the hishop hapmed to be present at the solemnity, which is still the custom in the Greek and African churches. In the lioman 'atholic Church, for the last :wn or 400 yeare the hishons have interposed a melay of seven years after infant haptism; in the Latheran Church, the rite is usually delayed for from $1: 3$ to 16 sars; and in the English Church, from it to 18 yaurs. There is, however, in the latter church nu limit to the periol. ( 6 . may be auministered at an earli.p perion, if a family is about to conigate: amb persons are confirmed 1 pe th iol or 70 , if they chouse The ceremony consists in the imbusition of hamis by the bishop, aceompanied liy in invocation of the Holy Chost as the enufurter and strementher. But both in the Lutheran am Enelish Churches, the ceremony is mate the oceasion of requiring from those who have been haptivel in infancy, a renewal in their own persons of the laptismal vow made for them by their godifthers and gohlmothers, who are therely released from their respusiluity: Sume can partake of the Lend's supper, in thes churches. unlas they have been contiment. In the liomia ('atholic 'hurch, ?' is held to be one of the seven sumanuents. and in its alministration, unction and the sign of the cooss are usel; and instead of the imphsition of lamhs, the person contimut receives a Fittle bow in the check, to reminel him that he

CONFC'IUS, a emdrated "limews sate, was
 town if Tsemse, in the Intty kinmam of Lu. His rwa name was kuter lout his disciphes wallad him
 Which the Jesnit masumatios latinisenl inte (inafurius. IIIs mother usent to call him Kiem (olitthe hilloek ), becanse ha tand an mand weration on the top of his furdinel, with whinh loo is often represunted. Viarions pronlinios is in wher instanes, were, we are twh, the imomnors of his hirth. An illustrina imainow has also ban inwontel for him hy his fome dincijus, who dave his aricin froms Huareti, a mytheleminal momareh of Chima who thamishal mon than whol years e.c. His father,
 a mo lat he was wry cormaly hrought mp hy his mother, Yanshe ant from his carlient vears, displasel an extraudinary luse of learning and Fonmation ine the anciont laws of his countrys.

Chincse whiters. At the age of 17 , he was male an inspector of the corn-marts, and distinguished himself iry his industry and energy in repressing frame, and introducing order and integrity into the whule business. Whom only 19, © married, but dirorced his wife fomr rears after marriage, that he might have more time fir study and the prormance of his pmblie duties. C. was next appinted inspectorgeneral of lastures aul flocks, and the result of his julicions measures, we are told was a genemal impmement in the eultivation of the country and the comlition of the pemple. The death of his mother, which happened in his $\mathbf{Q 3}$ l year, intermoted for a time his anministrative functions, aml arve orcasion to the tirst solema and important act of $C$ as a mnral reformer. Acrording to the ancient, lout then almost formeten laws of China, chilireu were alliged to resign all public employments on the denth of either of their parents; and C ., lesirous of renewing the olservance in hin native lamd of all the practices of renerable antiquity, did not fail to confurm to this lung neclected enactment. The sommity and spleniour of the burial ceremony with which he honouret the remains of his mother (another oht enstom which had fallen into disuse), struck his fellow-citizens with astomishment. anil they determined, for the fature, to hury their dead with the ancient hownus, Their example was dollowal by the nuchburing states, and the whole mation, except the foorest class, has continum the fantive to the presut day, C. now came to de lumpel unum as an authority in requad to the past, and rentured to sjeak as such. Fe inculeated the secessity of stated acts of homase and respect towards the deat, either at the srave or in a part of the dwellin+-house consecrateif for the $p^{n} 1$ pose. Hence, "the hall of ancestore", and anmiversary feasts "f the dean, which now dintinguish Clima as a nation. 4. did mot cond hore. He shat himselt a! in his house to $1^{\text {rass }}$ in colituade the the ce vears of mourning f.rr his mother, the whole of which time he dedicaterl to piniowifical stanls. We are thld that he rethectal ilecily on the etomal laws of morality, traced them to their stmen, imhned his mime with a senve of the dutios which ther inanse indsuminately on all men, and heterminud to nake them the immutable rales of all his actions: Herectorth, his career is only an illustrationnithis ethionl systrm. He commencel the instract his comatrym in the precents of morality, exhinting in his own latsu all the virtues he inculcatmb an uthero, framally his disciphes increasel, as the patieal ehanuther uf his philnsophy beeane mone alpurnt. the kingtom of Lu induced C. to recommence his travels. He first proceeded to Chen, where he was not much appreciated; and afterwards to Tze, where lue became one of the king's ministers, hut was dismissed after a short time through tle intriges of comnins courtiers. On his retum to La. he was appointed 'governor of the penple.' For a time, his intlexible virtue awed them into morality, and the delighted monareh ennferred the highest dignities on the philosopher; bat the arrival of a hery of beatiful syrens from a neighouring state, which hatel the increasing purity of Lu, suddenly overtmoned the edifice of morality which $C$, was constructing ; and in despair, he again went abroad in search of less sacillating ilisciples. His later wanderings were Fery umpopitions; state after state refused to be improved. He was in some instances perseeuted; once he was imprisoned, and nearly starsed; and finally, secing nu hope of securing the favouralide attention of the mass of his countrymen while alive, he retumed in extrome poverty to his native state, and spent lis last years in the composition of literary works by which posterity at least might be instructed. He died 479 B. c., in the 7oth year of his age. Immediately after his death, and notwithstauling the general demoralisation of his contemporaries, C. lecgan to be venerated, and succeeding ages adoruel his name with golden epithets. His family, which has contimed to the present day, through 67 or 68 fenerations, in the very place where their ancestor hivel, is distingushed by rarions hmours and priviluges, being the only example of hereditary aristocracy in China, while in every city down to the se of the third order there is a temple to his honour. The 19th day of the second moon is kept saered by the Chincse as the anniversary of his death.
The system of $C$. is, rightly consilered, the most faithful expression of the Chinese mind, although it is neither the oldest of the extant Chinese religions. mor that which can claim the greatest mumber of atherents. We have termed it a religion, but it ousht rather to le resardel as a system of social and pritical life lmilt uma a slight foundation of philuophy: It contains nu trace of a persunal God. There are, inded, a munter of allnsions to a certain havenly acmey or power. Shany-te, whose outward cmblem is Tiin, or the visible firmament ; but this shoms-te, in the opinion of the most enlightened Chinese scholars, is nothing more than a verbal persimitication of ' the ever-present Law and Order and 1 antelyence, which seem to breathe amid the wonderfit] activities of physical excation, in the measured "ironit of the seasons, in the alternation of light and darlames, in the dob and flow of tides, and in the harmumion aml najestic revolutions of the heavenly Indins. Shmetimes, indeed, C. nses language that minhin arem to imply more than this. In one of the sicir d bomks, shanr-te is heprictel as possessing a high measure of intuligence, and exereising some duru of moral covermment: he maishes the evil, rewals the gend, and is honoured with sacrifice. Inmantiately after, however, we are informed that his retinue eonsists of the six Tsong, the mountains, the rivers, and the spirits wencrally: Elsewhere, the pondw are enjeinod to eontribite with all their prower to the worhip of shanste. of celchrated bumbtans, of arat fivers, aml of the " shin" (spinits) uf the Some gmantess. Honore we are foreed to the andonion, that (: no more helieved slang-te to be

The iden of a ereation out of mothine by an infinity and eturnal Persm, th the end that the phry of his perfections might lee seen and felt through the magniticence of material syminuls by those intelligences whom in lis benefieent eondesecnsion the had deigned th ereate, is utterly unkmown to Confucins, He looked on the miverse rather as a strunumbs, self.-sustaining mechanism. Ite thonght that all thinss existed from cternity, and were subject to a thux and reflux, in obedience to initial laws impressed upon them, how and why, we know not, by some stern necessity. Thus, chaining to the carth, as it were, 'those thonglits that wander through eternity:' erushing, in fact every simitual tendeney of human mature, by repuliatiag all specelation, and well-nigh all philosophic investigation of every kimh. C. strove to direct the attention of men to the intions of social and politieal life. 'I teach you mothing', he says, 'but what you minht learn yourselves viz., the olservance of the three fumbumentil haws of relation between sovereign and sulject, father and child, hushand and wife; and the five capital virtues-miversal charity, implartial justice, conformity to ceremonics and establishel nsams, rectituls of heart and mind, and pmee sincerity:' This, in fact, contains the whole twetrine of $\mathrm{C}:$ : anh it was unquestionathy well snitel to the prosaic, pmactical. and conservative mind of the chmese, It was ley the strict and faitlfin! lecti, monance of apmonted diuties, and ly the cultivation of proper feelings and sentinents, that C Welieven wishom ar knowlellge coulh alone lee ohtained. He semes to have entertained no donht that the sreat virtues of charity. justice, and sincerity mi hat he developal withont the help, of any spiritual or relicions faith, ly a syecies of mechanical lisequline. They were nation to the mind, he thought, jnst as the ir ophosites were umantural. Here again, we fiml a striking example of that easily satistied miphilrsophic nuth riulism which eharacterised C., and has since leavenel the Chinese nation so thoronghly. He virtually says: ‘Just as I am foreed to accept the phenerena of the miverse as ficts, thongh 1 can give uo exphnation of their origin, so an I foreel to aecept the phemmena of the human mind as fiets, though 1 an sive nu explanation of their orign'. $\because$ fimls pril and thuml, wishom and folly, in thic hearts of men. He eamnt help making this distinction: some things are boul, others grodi; such is the uracular ntterance of his conseicnee, which he terms 'the liyht of intelligence.' Ho does not, however, aulvance in step) further, and make this moral conviction the lasis of a rehtin. Ifis 'grand' las no comection with any (iod. It exists? we are forcel to reenmise it as such ; that is all we can know. Cultivate it. Thuse grat fiws of nature alunt which we haw mothine except that there are roalitice, are on its sile. In mont forter What yon know to be nean and unworthy, for ' ha who oftembagainst fleaven has nu one to whom th: comprys,' 'Inperial Heaven will whly assist frithe.' Frum this stamp-pint, ${ }^{\prime}$, taught is simple nut comperensive rule of life, both private and [uhbic.

beople are still almast purely (eltic. In the times of the Irish lentarehy, the O'Connors were kings of Connanght. In 1590 , the province was divited into six connties, those above mentionerl, with clare (which was afterwarts juineul to Nimster). It then lust its indmendence, and eame umarer English administration.

CONNE UTIUUT, the largest river to the east of the Hurlson in the United States, rises on the south border of Lower Canada, near lat. $45^{\circ} \mathrm{N}$., and, after a fall of 1601 feet and a sonth-south-west course of ato least 400 males, enters Lom!r lsland Somnd, in lat. $41^{\circ} 10^{\prime}$. With the excention of the state of Maine. it may be said tole the chief artery of the whole of New England, separating New Hampshire on the east from Vermont $1 m$ the west, and afterwards crossing successively Missachusedts and the state of its own name. It is mavigable $n$, to I Iartford, a distance of 50 miles, for a dranght of eight feet; and u1, to Diduletown, which is 10 miles nearer the sea, for a draught of ten fect; while, with a few subsidiary caunls, it earcies barges of eight or ten tons fully ?00 miles abure the former city. The (C. has many alluvial inter wals on its hanks, which, being generally immated in the spring, are remarkable for their fertility. The stream is famons loth for the quantity and the ruality of its shad; aml its valley, about forty miles wide, mesents a considerable raricty of romantic scenery.

CONNECTICTT, the most sonth-westerly state of New Englant in the Taited States, and one of the wiginal members of the great confederacy, is situated in lat. $41^{\circ}-42^{\circ} 3^{\prime} \mathrm{N}$, and long. $71^{\circ} 55^{\prime}-73^{\circ}$ 5o' 1 V , Area, 4674 square miles. Between 1790 amd 1850, the mhabitants had increased from 238,141 to $3,0,701$-being on the average an advance of barely l per cent ber annum. A result so anomalous, where the general population doubles itself in a quarter of a centurs, is creditably explained liy the fact, that to all the new states of the Cnion ( . has miformly been a nursery of educated men of every chas-of merchants and agriculturists, of lawyers and statesmen. Lecording to the census of lsim, the state, besidesits two senators in the upper louse of Congress. semis four representatives to the lower, apminting as the smm of both, six presilmontial electars. Enker the existing constitution, which supersemed the charter of Charles II. only in 181s. the loeal anthorities are a crovernor, a hem-tomint-gncerner, a semate of 21 members, an assembly "f 215 representatives, and a supreme court. Between 1850 and 1850 , the assusserl value of taxable profuty, permmal as well as real, appears to have risen from $199,085,67=2$ duhars to $214,189,319$. Respectively to the west aml east of Connecticut river are the Jhusatonic and the Thames, of which the former is naviralile $1: 2$ miles upwards, and the latter 14 . \tany smaller streims allurl valuahle water-power. l'nailes the New Ilaven and liarmington ('anal, of 16 miles in lemeth, $1^{\prime}$. is trelverseti in almost exry dirmetion hy rallway, 'he chief towns are

CONRAD, see kombar,
CONSA'LVT, Ebole, Cardinal., a histin? nishmal peformer of alouses in the Papalitatus, was furne at Fome, June S, 1757. He was marle cardinat and secretary of state ly Pope Pins VII., and in this eapacity combludel the coneordat with Tapheon in 1801. His stanch mantenasee of the rights of his own sovereign agranst the insilinus ineratchments of France oftimed Japoleon, who in 1806 demander his remoral from afice; and the pupe at late un. willingly consented, on the desire of (". himself, whe was anxious that foace should comtimes. He was, Jowerer, again employed in 1515 in all the tramate thas lietween linme and land, anl anso in settlines the internal affaus of the ratal states. In the Jatter capacity, he reformed mumerons alnses: and the measure known as the hotu Promio, intrunted ly him in 1816, surpressed all monowiots, fendat tixes, and exchusive rights. The was a lihural patrm of seience, but especially of the fine arts, amb employed his leisure in the stody of literature and music. In diphmacy, he displayed great milresing aud was generally successful. He died in Iomac, Jamuary $24,1824$.

CONSANGUI'NITY is relationship ly hamel, as distinguished from Athnity ( 1, v.). or comection ly marriage. C. is either direct or limel that is to siy, in a line constituted by fersms generating and senerated, whether it be regadel in an ascentine or descending pint of view; or it is cullatorel. oblique, or trenserse-that is, where the persmens related are not descended the one irom the other, mat are all descendel from a common provent. 'Jin persons related in the lirect line behng parents and chidren, grandchildren, \&con to the remutest degree; to those related in the collateral line behnge Irothers aml sisters, uncles and nephews, aments, nicees, cousins, and the like. In computing the degrees of enllateral C., a different system was alopted by the Roman and the caum law. According to the first, each person was coment as forminis a ilegres, so that brothers, being each removen one degree from the father, were in the seem degree to each other; according to the second, the number of generations on one side only was reckomen, so that brothers were in the lirst, and cousins-german in
 fimman enmmation. In thw mangal collateral line, asin, i.c., where on of the two prons is further ramome than the other from the ommon stock,
 of anmations of the prom fathat remover.

I849), which are estecmel ammy his lest; hut lis fort lies rather in the delineation of simple villare life, of which his numerous tales and sketches affind ample evidenee. His Illustreted Mistory of Bryum (Antw. 1845) is interesting as a national work, but of little value as an authority. C. has
contributed largely to the revival of Flemish literature and his works are held in the highest estecm by his countrymen.

CONSCIOUSNESS. This is perhaps the most comprehensive term employed in desiguating the minil. If it had beeu usen mly in its widest signifiention, there would have been little diffieulty in defining it; lat unfortunately there are some ascestingly important meanings of a narrower rance that are commonly expressed by it, rendering it an cmbiguous or equivocal term, and like all such terms, a source of fallacy and misapprehension.
In the widest meanin ${ }^{\prime}$, $(6$ is almost identical with mind in action. When we are mentally alive, or performing any of the recognised fumetions of the inind, we are said to be conscions: while the total cessation of evary mental energy is described by the term 'uneonsciousness,' among other phrases. In dreamless sleep, in stupor, faintinu, and under the inflnence of the anesthetic drues, we are unconscions; in waking, or rallying into renewed mental activity, we are said to lecome couscions.

Is the mind in its waking or active condition may be more or less excited, on vary in the intensity of it manifestations, there are deyrees of C.; anit, in accortance with a very common usace, the name is apt to be ampliel to den'te the higher degrees in aposition to the lower.
In lirst learning to write, to east mp sums, or to flay on au instrunent, our mind is put very much on the stretch; in other worls, we are very much excites or highly conscions. When years of incessant practice have consummated the process into a full-formed habit, a very small amonnt of mental attention is involved; and we may then be said to perform the work all but unconsciously.

We must next alvert to the special or restricted meanings of the tem, which are those that play the most important part in philosuphical discussion. In the first place, we find it apried to denote the mind's eornizance of itself, as (1)posed to the connizance or examination of the outer word. Hence, in studying our own minds, we are said to be using C. as the instrument; but in stulying minerals or plants, we resort to external oliservation by the senses. A contrast is thes instituted between C'. aul observation, which contrast gives to the former word a peculiarly contracted ni aning for in the wide sense above duscriberl, olscruation is truly an act of conscimuness.
In the next place, C . is sonctimes identified with Buldef. The often express a strone atlimation by saying, that we are quite conseious that such a thing is sn. It is the strong instinctive tenteney of our nature to brliwe a number of thing bere we have ronn thronghay large experience of mathor of fact. The berimun fimetion is a prominent attribute of mental actinaty. We are scarcely able to feel or act without the operation of belief, "r without making assmontions in anticipation of the reality. Wh. beliese dirst, amp pove or dispowe afterwards. 'Jho hume intensoly we are made conscous, the more strondy we pass info these intuitive exnvictions. We mincitatury believe in the future persistane and universal prevalence of the order of thines that wo are lern into, uatil such time as our wap: minnee gives us a check. One emotions all jreatace futiots in propartion to their strength. Fear makns nu bolieve in coming wil ; joy and clation sivo continume in coming enom. So that it is frue to a wertain extent, that the state of lelief is engembred along with ('., and is stronetr as that is strongre;

Correct usare, therefore, would dictate the employment of the term in question only in the one sense, in which it is co-extensive with being mentally alive, as opuosed to sleep, torpor, insensibility, \&e. Anything that renders the mental activity more intense, that increases the whirl of the brain (such as strong I leasures and pains, great interest in anything that is going on, \&c.) is desimated by the positive term C. ; the opposite condition, and also the feebler modes of exeitement, are expressed by the negative-unconsciousness. All mere special and restricted applications should be forborne, as introducing confusion into thought, and error into philosophy. The study of our own mind may be, expressed by such phrases as 'self-consciousness," 'introspective attention,' and the like. As it is an eutire fallacy to talk of C . in general as acerediting doctriues or matters of belief, any acceptation of the word implying this should be avoided.

Points of great importance are involved in the determination of the conditions of C ., or the circumstances attendant ou the manifestation of mental excitement ; in other words, the stimulants of our tmotional and intellectual wakefulness. The most general and fundamental condition of our becoming conscious, as recrards inthences exteraal to the mind, is change. The even continuance of one impression tends to unconsciousness: and there are a number of facts that shew that if an influeuce were present in one mararying derree from the first moment of life to the last, that influence would be to our feehing and knowledge as if it did not exist at all. This importaut point is more fully illustrated under Conditioned.

In a reeently pullished volume, entitled Contributions to Mental Philosophy, by Immanuel Hermann Fichte-the son of the renowned Johann Gottliel, Fichte-translated by Mr Morell, the attempt is made to cstablish the existence of a Preconscious Mimd, distinct from our conscious life, and not dependent like that upon the bodily orgamisation.

It appears that Fiehte considers the power of germination and growth-or that energy, whatever it is, that unfolds the germ and conducts it to a enmpletely formed organisation-as a function of the mind or soul; which is almost to revert to the views of the ancient philosophers, with whom the soul was the 'vital prineiple,' or the peculiarity that distinguished oryaised beings from minerals. Aristotle spoke of the sonl of plants as well as of awimals, or of man. Fichte couples this power of Lermination with the following things-manely, the instinets; the processes of iutelligence that we seem to go through without heing aware of the steps, as in the sublen inspirations of men of ernius; with all the mysterious, 1 ,henomena of secoul-sight, clairvoyance, do. ; and the aggregato of this he crects into a preconscious mind or soul, the rentrast of C. as above defined. For the varicties or divisions of our conscions states, see Mint.

Consclousness, Doubles See Dorble Conschocssess.

CONSCRIPTION is the system wherely tho Frowh and some other forcign armies are recruited. It difiers "ssentially from the longlish system in beine compulsary. Soe Dhemsic Amm:

In Franec, the system presents itself in the following form. Fvery lronchman may be ealled upon, at the ago of 20 , til serve his country as a soldier; Int the sorvice is ojen to those who choose to enlist as carly as 14. Miving satisfied the law of C., he camme again be called ugn to serve. The term is gron rally for sown years, but may be voluntarily frolomeral on certain enditions. T'lie conscript may
fime a sabotitute, hat is hold responsilde for him for a space of one year. An acenomt is kopit of the number of youths in France who rach the apo of 20 in each year; this, dumer the last fow years, has
 exempt on varions epoumb, lint the remainine two thirds are liahle, and ont of thase the number required for the army is drawn by lat. All thise
 or havo any natural infirnitios untitting them for active sorvice; or are the ulust of a family of orphans; or are the maly sons of widhws, or of disabled fathers, or of fathers above 70 years of age: or are intender for the churels; or are pupils at ecrtain colleges. Moreover, if two brothers be drawn as conscripts, and the yonmer is ellicient, the elder is declared exempt; and if uf two only brothers one is already in the army, or has retiral through womels or infirmity, the other is exempt. Conprits and felons are not allowed to culist, as they would degrale the military profession. Voluntary whistment is aways very small in France; anil lunce the system of C . is decmed indispensable.

CONSECRATION is the act of solommly dudicating a person or thing to the service of Goul. It was one of the most wilely surenl relinins ceremonies of the anciont work, being practised in Iudia, Egypt, Chaldiea, Judea, Greces, Liome, Britain, and nither conutries. In the Ohl Tustament. we read of the C . or dedication of the dirst-hom, both man and beast, to the Lorl ; also the dedication of the Levites, of the tabernacle and altar, of tields, houses, walls, \&c. This custim, at least so far as regarded places and things, did not pass immediately from Judaism to Christianity, for the latter bimis more or less a persecutal religion until the time of Constantine, could not venture to indulge with safety in any public cermonialism; lat no soner was the sword of persecution sheathul than, aceordins to Fusebins, 'the sight was afformen as, sorerly desired and prayed for ly all-the festivals of dedications and consecrations of the nowly erectad houses of prayer throughout the citics.' Euseljins himself describes the C. of the churnh huilt at Jernsalem by Coustantine, $335 \mathrm{~A} . \mathrm{D}$. The practice of consecrating religious ulifices has continued to the Iresent day in the Romion and Anglican churches. The forms were at tirst very sinple, consisting chictly of payer, the celchration of the Londss Super, thanksgiving, and bencliction; but they aftwwards becance more nomerous and imposing, whilst, also, the bishops and higher dignitaries assumed the power of consecrating entirely to themselves. An important part of the C. of Foman Cathethe churches consists in the deposition of relics for a time apm the altar. In the English Church, each bishol, is left to his own discretion as to the form of C. tal le alonted, but that most generally nsed is the form sent down by the bishons to the lower honses of convocation in 1712 . The English Chureh also retains the C . of burying-grounds.
C. of Aectibisiops Ayd Bishors-Acombing to a canon of the first Nicene Comeil, there must he fome, or at least three bishons persent at the C . of an archbishop or bishop. The furm used in the Cinurch of Englam is that preparel in the reign of Elward VI. The liomanists deny the valitity of English orders generally, as derived from heretical and improperly consecrated lishops. They hand an old story, refnted by their onn historian Lincary, which is known as that of the "Nag's Tead 'consecration.' Aceorting to this story, Archbishom Parker was consecrated at the Nars Heal Tavern, Cheapside by one of the Protestant bishops present laying a Bible on his heal, and saying: "Take thou authority;' \&e. Lingard thus relates the facts:
 kins, once Nuftrazan of bedford, who hall both beer consereated awording to the loman (atholic pontilical, in the wigh of II ury V'lll, and Somery, the doprivel bishour aif 'hichewtor, and Coverdate, the dnprived Bishop of Exctor, who had been buth consearated acomine to the lioformal ordinal, proceadend
 crate hime after the form alloptal in the rein of bdwad CI. A fow hays later, l'arker, as atodlishop, wntimen the ehection of Ibarlaw to the see
 and with these for his asuistants, envenrate I all the "ther frelates wect.' The (\% towk prace in the chapel at Lambeth, as apmars ly the amhushapos register, and Lingardsays that there is mothine to comenance the supposition of the matry bund other than authentic: T'loe story prolahly alluse from a fact, mentioned hy buller, that the rommissinnors who contirmed Parker's clection dincl at the Nas Head, a tavern much frepuential ly the comatry cherg.
chisecrathon of the Elemesty, Aie Lohis Sutrer.
[ONSECUTIVE, a term in Music, alplien to wotwes and fifthe, which, acomatiry to the. rulu's of hamony, are strictly furbiden.
CONSEGUIANA, a volcano of Niearama, oceupirs a promontory on the south sile of Finscea Canlf, about ten miles distant from the I'avife Gean. The crater, at an clevation of alnut 40 mo foet abore the mean level of the survonding conntry, is ahout half a mile across, while its interion descends perpendicularly to a depth of ano feet. In 1835, a fearfal (rmption, the last on recorl, converted into a waste a large tract of grazing-lamb.

CONSE'NT. When we state that $r$. is the frimution of all contracts and lecal obligations of wery kinh, we state a proposition often in the munths of lawyers, but the vast magnitude and impurtance of which is by nomens always apmarent arin to them. The dinctrine that the free ( $\therefore$ of the parties lomal, and not the will of any earthly lecrislater, or the form in which that will is expersemb, constitutes the hinding chement in contracto. Hows as an inevitalle logical conswumee from the dortrines of personal and prolitical fremom. Aml yet we continually forget it, and mot muly spak lout act at varione with it. We talk of persmes luing
 whereas it is olvions that a valin inamace, like every other eontract, can lo mak and mmale onl: ly the contracting parties: and that all that cither civil or ecelesiastical authority cand, is to ascertain. at the instane of on or wher of thom. whether is Turs been made or monds. Fron orerlowing this puint of tiew, differeners lutween lewal syatems which are mercly external, are witen supmesel to be fumbmental. The low of sentamb, which admits setaral ways of prowing matrimonial ('. Which the law of Enchani rejosta, is on this acomunt sulpursed t" biffer from it in prioripl? The only question butween them, in reality. is. as to whether the circumstanes which the baw of satlonn abuits in
 paint of fact. If it le trie that the mly means ly which it ran has ascertainal that tran persons do agre to ine mata and wife, is by their devarine their agreconent cithe. lwhere a clewnman or betore a parliamentary resutm, then the law of En_land does right in repoctins all ather arlence. If. on the contrary, the fact can be estaldished, as is believed in secotlanl. loy other means, such as a reclaation before witnestes. or an exchanm of writings, then the dew of sentland is right in admitting theso
means of proving it，am making the question of marrives or momariage，as it loes，one of simplu proof．The ditference between the two systems is thas soen to be nut one of principle．Wit one of －gediency－a puestion，not in the lia of marriace， ur of contracts，which is the same in lowth comotries， anl in every country，but in the law of avidenere．

Fet so stramely illorical are mankinnl，that in Sontlam it is still asked whether or not a mariare ian be constituted．in cortain cirennstances，with－ wht a deelarator of the court of Sessims ；and in England，until very recently，no marriage eonlal be dissolved without an act of parlinment．The prac－ tical question as to how（＇shall le proven，is on＂ simroumend at all times with the grentest dithenlty That its alsence may le＇assmmed in the case of all persons of imperfect umberntaming，imm，conse－ quently，that the yower of ematractian shoulnd he ，leniel to iliots，malmen，anul pupils，helpos us bint a very small way．The real hifficulty vomsists in histmonklines，in the case of grown ant sam men， betwon such rath $\left(\begin{array}{l}\text { as may } \\ \text { ne safoly assmmed to be }\end{array}\right.$ a deliberate act of the ruson．taling that word in its whest sumi，and such eqporment $\mathrm{C}^{\prime}$ ．ns may have had its motive in eaprice，passiom，inmonce，in any temporary and accilental alserqation of minul．

Having gatued the sumport of a young Ehmishman, Mr Yomer, who advanced the repmimel sum of money, (? estalkisheol, 1 sisi, on a large setate in the dipartment bure et Laire, a somiallist conny or Phenlensfire: but the experiment failen. and with it The IThelemx fell to the: grome. Howeror, a new organ of co-opuratix' doctrins, the Jemmerthe Pacifiger, was smon establishes, and was ellitent hy O. Who displayed grat zeal, jerseverance, and ability, in his hopeless battio with the laws of society as mow constitutiot. Amome lis numernes writings, the chief is the /hastine sertule, undicated to Louis l'hilippe. In 1sts, C. Was acensert of high trason, and compreded to rseape into Belonitin, whence he emigrated to Toxas, returned to broussels, ant again mimprated to Texas, where he founderl a kiocietarion commonity, called $L_{\text {a }}$ Reumion, whieh as late as ISte was in a thmorishing condition. See Comutrasm.

CONSLDERATION, in Law, the thing given, or done, or the forbearing or suffering something ats recompense to another, for doing, giving, forlearing, or suffering. An obliuation incurrel withnit C . is, in England, termed vohmtary, in Seotland gratuitous: if for C., it is so styled in England, Lut in Scotland it is ealled nnerous. Considcrations are divided in Enytand into good amb valuable, the former leing affection for a near relative, the latter a pecmiary or other tangible benefit, or marriage. There is no corresponding division in Scotland. But in Neotland, on the other hand, there is, as a general rule no need for the intervention of a $C$. to make a contract valisl, while in Englani a contract withont ( ${ }^{\prime}$. is invalit, monless it be eridencen ly formal deed ( (c. v.). In this xespect, the law of Englam is fommed upon the maxim of the civil law, ammo preto non oritar actio; while the Scottish mule is fommied on that of the canon law, omne rerbun de ore frideli cudit in retritum. But the C. which in Englami is sutficient to support a contract, may le of the most ilhsory kind. Thus, an agreement to take less than the full sum in payment of a innst is without $C$. and invalin, even throgh the sum stipmaten be pain, because there is no C . to support the arrecment to give up the resilue; lut if the agreement was to take a stick of sealing-wax insteat of the moner, it is an agrecment for valualle ' ' and binding, and the transfur of the wax extinguishes the delet.

There are some eircunstances wheh, in both countries, warrant the setting aside of obligations without C. whether male liy aleed or nut. In England, they are voll as against bona fille InIrchasers, by ì Eliz. c. 4 ; and voil as against crelitors where the grantor is indelitel to such creditors at the time to the "atent of insolveney, loy 13 Eliz. e. 5. A similar rule to the latter is estat. lished in Scotland by the act I 1 inte, c. $\overline{5}$, and without proof of insolvency when the deed is erantert to a near relation, or a person in a confilential sitnation, by 162 I e. 18. And all ondirations for which the is illegal or immoral, are in $\overline{\mathrm{l}}$, th comentries wid.

CONSIGNMENT, in Mercantile Law, is the term applied to goods whieh are placed in the liands of an agent or factor, for sale, or for some other specified 1 mrpose. Where cither the consiguer or consignee hecomes bankrupt. questions of nicety often arise regarding ownership, and the consepuent rights of the parties and their ereditors.

CONSISTORI (Lat. Consistorium), froperys, a place of asscmbly, but in the later Latinity the worit came to sisnify the partieular place where the prisycouncil or rabinet of the linntan emperor met, anit after the time of Dincletian and Constantine. the council itselt. The assessnrs of this council were

117
purtly thu ortinary monkers (romites consistorima), such ass the iunprial chane illor anul semeschal, partly "xtramdnary: and their duty was to deliberate on all the impritant affars of lugionatinn, antministratim, and justice. 'The form of the imperial C. passed ww into th. early Christian Church. The hishops "stablishom tharir comastories ; and the highest eeclesiasticel court, composish miny of carlinals (the (collegre of Carlinals), which menets in the Viatican, muler the presidmoy of the 1 mo, to dotermine all such matters as the arpmintmont of cartinals, archhishops, lisheps, \&ce, sthll lary this nam. as his also the" jrixate emumils which the f"In can call at hiw pleasure, 'Ilue Protestant ' harch of fermany was imhleed to propetuate the cmasistoriat comets prineipally becanse the episeopal anthority pasmal into the hands of toritorial princes (rar. Lometrsfiesten) not familiar with "celesiastical affairs. The first Latheran ( $\because$ was estallished at Wittenherg in 15id. After 1555, whon the pean of Angsibur, secured the recognition of the Y'rotustant religion, similar consistories were gradually formed in other places. The Lutheran eonsistories exreise a supervision and discipline over religion and edncation, over the clergy and the schoolmasters, and examine the theological candidates on their trials for licenee and ordination. They have the regulation of divine worship, the administration of church property, and at an carlier perion, possessed a cortain jurisliction in regard to marriage. - In the Fronch I'rotestant churches, the C. possesses a more restricted jurisdic. tion than in Germany. It exercises authority over a circouseription, i.e., a tivision of the church eontaining b0\% souls, anil is eomposed of all the pastors of the cironscription, together with from 6 to 12 lay-elders elected lyy a certain number of the people. In that purtion of the French Protestant Church which has athpted the Angsburg Confession, the authority of the French monarch is mure recomised than in the Reformed Chureh, for it has a consistoire ginezel, compused of delegates, lay and elerical, of the varins circonscriptions, the presilent of which is a laynum nominated by the enneror.- In Bngland. the word is used to denote the court Christizn or spiritual eourt. Every archbishop and hishop has a comsistorial const, hela either in his cathedrat or other convenient place. lefore his chancellor or commissary, for ecelesiastical causes. In scotland, the consisturial courts have lapsed into the commissarycumuts. See Commissari:

CONSOLIDATINS ACTE. In order to secure unifumity in acts of parliament having reference to [ublic undertakines, and to avoid the necessity of
repeating, in cach special act, the clauses usually introluced into such acts, the deviee has heen adopted of consolidating or combining all these provisions in one act having reference to the particular liun of mdertaking. Of general acts of this nature the most imporant are, the "ompranies' Clauses Consolidation Act, 1845 ( 8 and 9 Vict. c. 16) ; The Lands' Clauses Consolilation Act, 1845 (Sand 9 Tict. c. IS), amended as to Ireland ( 14 and 1.3 Vict. c. 70$)$; and The Liailways' Clauses Comsolidation Act, 1845 ( 8 and 9 Tict. c. 20).

CONSOLS, a contraction of Consolidated anmuities. In menrring the national debt, goverument borrowed money at different priads on special conditions, being generally the payment of an annnity of so mueh per cent. on the sum burrowed. Great confusion arose from the variety of stocks thus createl, and it was thought expedient to strike an arerage of their value, and consolidate them into one fund, kept in one reenunt at the Bank of Ens. land. The Consohitated Ammities' Act was 1mssed in 1757.

CONSONANCE, in Music, a term applied to comlinations of somets, whose vibrations when heard together so satisfy the ear that no other sound is wished fur, or expected to follow. The more or less satisfying effect of $C$. depends on the greater or less simplicity of the interval formed ly the combined suands. latervals whose relative vibrations can be expressed by numbers from 1 to $G$, are considered consonant; while those which can noly be expressed ly the ligher mumbers, mot a duplication of the lwer as $7,9,11, I: 3$, \&c, are called dissomant. Sounds vilmating as $1: 1$, are mison ; as $1: 2$, produce the octare; as $2: 3$, the tith, which inverted becomes $3: 4$, the forrth; as $4: 5$, the major tharl, which inverted becones $5: \delta$, the minor sixth; and $5: 6$, the minar thirl, which inverted hecomes $6: 10$, or $3: 5$, the majur sixth. Consmant intervals are therefore the third, fonrth, fifth, sixth, and octave; from which it fullows that there is only me consonant fumlamental chand in music, viza, the common chart, ar tritis hermmich, pertath, Inting a liass mote with its third, fifth, and n'tave, which inverted pmatuces the chumbs of the fith anm the $\frac{e^{\circ} \text {. }}{}$ See Chord. The ancient Cirecks admittel of still fewer consomancus in their systom of music, as they treated the third and sixth as Rissonamees ; a prooi that their system of harmony was mit the same as ours. Their name for ( $\%$ was symhony, and for dissonance, Diaphony. Early in the minho ares, only the octave, fifth, ami third were trated as eonsmanees. Franco of tohnone was the first who divided $C$, into perfect, scmi-perfect, and imperfect. In the writines of Mareluettis, and of Janmes de Muris, in the first half of the lth e, we find alroady the important rule, that two lurfect consmances $^{\text {ner }}$ frollowing in similar progression are not allowable. The study of the $C$. was carricel still further in the 16th c. ly Zerlino, who ascertained the true mathematieal pronntions of the major and minor thinds. Notwithstamling this, l'alestrma, up to the end of the same contury, amillone alter him, all who wrote in the same style, carcfully aroinded the use of the third in the final chmol, tinishing always with the forfect whanances atorrling to Francos. Of lab years, the importance of the 0 . has attracted the attention of many eminent themesist in masio, ass well as philoserphical writers of mondonted julponent, sime of whom do wat he sitate to consider the interval of the seventh a G. because it diflers from other dissomances in not ropurine preparation. There caunet be a dombt that the chome of the seventh, 1 : li, (i, and If that, comsidered individually, and mot in connection with enther chords, is as cuphonions and
satisfying as the common chord; and when these intervals are placed at the distance from the fundamental note they harmonically arise at, the consonant mature of the combination is still more olvious. A scientific organ-buikler in Scotland has long been in the practice of introducing the seventh as an interval in his mixture stops, forming with the fumdamental stops a union of sound decidedly consonant, and prolucing a remarkally brilliant effect. The exact limit of C ., or the point where dissonance hegins, seems not detinitely fixed, if fixed it can lee. To define C . to be agrecable sounds, and dissonance to be the reverse, as some do, is clearly absurd, because they luth essentially belong to harmony or concorl, or as the Germans more properly call it, Die Kumst dis Wohtklangs, in which there can be nothing absolutely discordant.
A perfect C. canses a musical effect known as Tartini's Grave Harmonic, it having been first observed by the eminent violinist of that name. Along with any two mnsical notes sounded continuonsly, there may lie heard (if the notes are in accord) a third deeper tone, cansed hy that number of vilurations which is the greatest common measure of the numbers prolucing the primary notes, and upon this Tartini founded his theory of harmony (now obsolete), by assuming that the grave note is the natural lase of the chord producing it. The note thus somded may be too deep to be appreciated ly the meducated ear, although felt as a succession of beats, and these should not be confounded with the 'heats' resulting from the sound of a discordant interval, a sluccies of jar or thutter known to tuners as the consequence of the imperfection of a consouance. The subject is treated at length ly Professor de Morgan in a paper published in the Transactions of the Cambrilge l'hilosophical Society, 1855 .

## CO'NSONANT. See Letters.

CO'NSORT, literally, one who throws in his lot with another. In English constitutional law, the term is applied to the husband or wife of the reigning sovereig, viewed not in a private but a piblic capacity, as participating to a certain limited extent in the prerogatives of sovereignty. The extent of these precogatives in the case of a queen$\therefore$ are stated by Blackstonc. She is, he says, a public person, exempt and distinct from the king, and 'not. like other married women, so elosely connected, as to have lost all legal or separate existence so loug as the marriage contimues.' For this, Sir Elward Coke gives the curious reason, that the wishom of the emmon law would not have the limy (whose contimal care and study is for the Imblic, and circe ardua regni) to be troubled and disquieted on accont of his wife's domestic affairs.' In addition to this peculiarity in her domestic fusition, the queen-C. enjoys screral exemptinns and minute prerogatives. She pays no toll, and is not liahle to amercenent in any court. But where mo such exomption is expressly recognised hy law in farmur of the royal C., she is on a footing of "Iuality with other subjects, and the privileges which the tithe convers are chictly those of preconlonce. and lolong to court etiqucte. Up to the year 1si7, the lustand of (Ducen Victoria possessed ino distinctive linglish tithe, and no phace in cout combonial excopt such as was conceded to him by conrtesy. In that year, the title of Prince-C. was conforal upon him ly letters-patent.

CONSDRAAOS, a mombination hetween two or more persons to perictrate an mblawful act, is callen a conspinacy Nec Combisation.
cosspliader billi. In eonsequence of an attempt to assassimate the Fmperor and Empress of the Prench whilst gring to the opra on the evening
of the: 14th Jamary $18 \%$, hy the Italian refugee Orsini and others, loy munans if "xphasive sholls purtly manufactured in Enchand. a hill was intro. dued into parliament by Lard l'almerstom, derdatine comspiacy to murder, which the law of Enelam had hithorto treaterl ins a mishompomer, to lna a felony, punishathe with fromb servitule ame applyo ing that prosision to all perseng whether Enerlish or foreign, and to all conspivains to mortur whereever intented. In plaed of latist rearded mopoly as a piece of law reform, thu (') Ii, whtaned a prititioal character partly from a dispratoh from the lrench minister, Count Walwosk, demanding some such chang in mor law, and patly from expersions eontaned in certain addrosses which were presenteal to the limperor by the Frouch army, aml malished in the goverument organ, the Monilus, which were rogated as insulting to England. The minsatry wero acoused of truckling to France; and though on the motion for leave to bring in the hill they hav a majority of 200 (290 against ! 1 ), an amemhent by Mr M. Gibson on the secomed readine, virtually amounting to a vote of consurn, was carried by a majonty of 19 against them (231 to 215).
CO'NSTABLE (Lat. constalulus). Whether this oflicer was called originally comes statoule, the coment of the stable or master of tive homese (as alleged by Uucange), or the Konimy-sturut, staff aul stay of the king (as lown, sidhon, and others, with less reason, hase mantaineth, the C., both in l'rance and Englam, was a military personage of the very lighest rank. The C. af France rose gratually in importance from the eomparatively molest pusition of an officer uf the homsemold, till at last he became, ex officio, the commamber-in-chief of the army in the absence of the monard, the highest judse in military offeuces and in all rhestims of chisulry ant housur, and the supreme regulator and arbitrator in all mattors comected with talts, tomramments, amd all matial displays. The office of $C$ ', is traced lack lag Anscme to Allieric, who heth it in I (60); but the tirst $C$. of France who alpeared at the head of an army was Hathew, the secomel saiguenr de Montmoremer". The otfice was suppressel hy Lonis Xlll. in limin. Among the offices of the ancient monarely whech were restured ly Sajuleon for mere parpmes of stat", that of 1 . was ome. His brother, l'rince Lumis Napoleon, afterwats king of Hollame, was cratal tramed (b, the Tice-C: lemis Marshal herthiar. The ntfice was again abolished on the resturation of the liourlons, and has not since been reestalishent. But hesides the C. of France, almusf all the great vassals of the crown had constables who fillem aualogors offices at their minor courts. There wowe constables of
 latter of whom may lee regarded as the progenitor of the C. of England.

Shortly after the Couquest, a Lorl High C. of England appears, with powers and pivileges closely corresponding to those of the ( $\%$ of France ( $1:$ ) Lich. 11. st. 1. c. 2). His pasition as juige of the conet of chivalry, in conjunction with the Earl Mareschal, and the limitation of his power, which fullowed on the statute 13 lich. 11. c. 2 , are explainel under Chwalry, Coter of. The office was aholished by Henry Vill. on the attainder of Elward Staford, Duke of Buckingham; and a Lord High ( 1 . is now appointel omly on the necurrence of great state ceremonies, e. g., n voromation. The High ( $\because$ of Seotlaud was an ollicer very similar to the (. of France and Englimd. After the Foblellion, the offices of the inforion constalites deprencent on the High C., such as the ( ${ }^{\circ}$. of the Castle ( $\mathrm{I} . \mathrm{r}$. ), were atholisheh, but that of the Hirh C. himself was expressly exempted, aul still exists

CONSTANCle Lake (ralled by the Cermans Bolensie on Bumbenser, from the ohl castle of Bonman-the Lucus Imipantinus of the Romans), lies on the north sinte of the $\lambda$ lps of Simitzerland, and foms a montin-pmint of the five territories -Falm, Viortmbere, lasaria, the Tyrol, amb switzrland. It has an clevation sammsly estimated at from 12.n feet to 1355 feet above the sea. Wake 6 . is traversed by the Rhine from enst to west; its greatest hength is about $4 t$ miles, utmost breadth 9 males, aud depth 964 feet. It is disided
into the miler aml lower lakes, the latter of which extends from Constance to Stein. Anciently, the hake was nore extensive towari the south than now. In the the c., it is said to have extended as far as Theineek, now some miles distant from the shore. The shores are formed by lilly lames, with low tracts at the months of the Phins and smaller rivers. Corafielels, vineyaris, bastures, orchards, and wooded eleclivities, with here and there the ruins of old castles interspersed, surronnd the lake. The water has a dark-green hme, witen rises sndilenly some tell or twelre feet during a thaw, and rolls in high waves during the prevalence of a strongs south, nortl-west, or east wind. Withont visible cause, it sometimes rises and falls to a eonsiderable degree. In one hour, in 170 , it rose luetween 20 and 24 feet above the ordinary level. It is seldom frozen, cxcelt in very sesere winters. The lake contains sixty kincls of arpuatic fow ; twenty-five species of fish, ineluding fine salnuon, and salmon-trout; anl several species of shell-fish. Siuce 1824 , steamnavicration has added to the facilities of comancre aeross the lake, and its commereial impurtance las been greatly inereased by the obewing of a railway from Friedriehshafen, liy $[\operatorname{lm}$ and stutgart, to Heilbronn.

CONSTANCE, a city in the errand duchy of Baten, formerly a free eity of the German empine, situated on the Lake of Constanee, at the place where the Rhine connects ly a very short course the uprer and lower lakes tongetluer. C. is one of the most ancient towns in lremmany, lout it is very much decarel, its momation, once 40,000 . being now not more than 50010 or 6000. Its catherlral was erecterl in the 1Ith century. C is notable in history for the ecclesiastical conneil beld in $1+1+1418$. The aliject of the Conncil of C. was to put an end to the disorders in the popedonn and in the election of 1 mpes, and also to prevent the spread of the dnetrimes of Huss. There assemthenk, with the Empern Sigismund amd I'one John SiXIT, 26 princes. 140 counts, more than 20 cardinals, 7 patriarchs, :0 archbishops, 9] bishalns, 600 prelates and toctors, and ahmont 4000 pritesta. The three rival lopes. Tohn XXIll., Gregory XIL., and Benerliet Xlll . wore deposed, amd Bartin $V$. was elected. Huss and Jerome of I'ragme were eondemmed and burmed. The emperor was disappointed in his bope of a thoroush eeclesiastical reform, and the Comeil of Basel was afterwands called to eary on the work which the rouncil of $1 \therefore$ lauf failed to accomplish. The hall in which the comell not is now the market-hall of Constanee. (1. has mama factures of silk, cotton, and watches, active tislewins, and the cultivation of vineyards and rimalens employs a considerable number of the inhahitants.

COASTAN'T is the name given, in mathemation amalysis, to a quantity which remains the same for all cases of the problem, in obresition to a varibla. Thus, in questions about the fall of lmalies in given times, the force of gravity is a anotiont guatutis: ln the integral calculus, the name of comstate in given to those puantitios which, alitur intornation, are amexed to the integral.

however, two years after, dismissed aml banished him for the spirit he displayed in resistiner the First C'nosul's eacraachments on liberty. Juring his hanishment, he travelled for some time with Madame de Stael, and afterwards settlud in (iermany. In 1813, he published his eelebrated pamplet, On the Spirit of Conquest and $I$ surpation. In 1814 he returned to Paris, where he wrote seweal pamphlets in farour of constitntional liberty, which he maintained was enjoyed umbr Louis X'V111. Napoleon's government he described as a 'government of 'Jamelthes,' anl the emperor himselif as 'a Genghis Khan,' Iet dming the Hundred Days be beeame a comncillon of state, and assisted in framing the Acte Additionme. In 1819, le was elected a deputy, became ultimately learir of the opposition, and in this eapacity samed umbumded popmarity. C. de F. was a true patriot. Hu loved liberty better than monarchies or mobs, and therefore, while he opposed the despotic measures of the government of Charles X., he devlured the revolution of July 1830 . He dien December 1830. As a pullie speatier, C. de R. was in his day the dearest and most persuasive adroeate of constitutional principles in France. As a political writer, he was even fully more effeetive than as a speaker. Among his works may he mentioned, Discours Prononcés d la Chamlne des Deputés ( 2 vols., Par. 1828), the Cours de Politique Constitutionntle ( 4 vols., l'ar. 1817-1820, 2d ed. $15 \% 3)$, in which are collected his minor works on representative gorernment. Among his most ambitious works are Mímoives sur les Cent Jours (Par. 1820), De la lielifion cunsidérée dans sa Source, ses Formes, at ses I) étoloppements (5 vols., Par. 18241831), to which josthumons wrork his Du Polytherisme Romain, consicleré ilans ses firpports arec la Philosophie Greepue et lu litligion Cleretienne, forms a kind of supplement.

CONSTA'NTIA, a district of Cape Colony, in South Africa, lying on the eastern and north-eastern slopes of Table Momtain range, and distant from Cape Town about 12 miles. C' eonsists of only two estates, Creat Constantia and Little Constantia, Which have lony been famed for the quality of the wines prodnced upon them. Nany attempts have been mate in other parts of Cape Colony, as also in France and the south of Emrope, to produce a wine similar in quality and flavonr to the G., but all hase failed: and it is now known that not only to the quality of the $C$. grape, but also to the character of the soil, is well as to the Peculiarly genial exposure of the district, the characteristic excellouce of the $C$. (proper) wines is trivetable. The soil of the estates is rieh in alkalies to an estent prerceptible in the grape itself, and the bineyards hatue very equahle exposure, being sheltered from all suden changes of temperature by spuns of the great granite mountain. The grapes muler this shelter ripen rery miformly, so that the earthy taste, which spoils the charater of other ' 'ape wints, ami which is produced by using mapieked grapes of different degroes of rijuress in tho sume famelh, does mot attinelo to the (! wines.

 the wine-trale of this settlement shem also that not
only in quality lont in quantity great and stranly alvancement is being made-the exports of south African wine for 18 s 0 being in round numbers abont 700,000 gallons, nearly threm times as much as for 1850 . C. supplies about zon grallons.

CONSTANTIN A, a town of Span, in Amalusia, situated in a momotainous district, abont $\mathbf{F 0}$ miles north-north-east of Seville, to which city it sumpliws much froit and ice. It has mantifatures of leather and soap, distilleries, Hour-mills, \&e. I'up. 7000.

CONSTANTI'NE, the capital of a province of the sume name (the enstermmost province of that Fiench colony of Alperia), is situated on a hill with tlat summit, three sides of which are washed by the Jimmmel, flowing through a deep and narmow ravine, aml the fourth is connected by a matural momal with the surounding mometains. Lat. $30^{\prime} 2 y^{\prime} \mathrm{N}$., long. $6^{\circ} 37^{\prime} \mathrm{J}$. It is 830 feet above the river, and 2162 feet above the sea. It is surrommed by walls constricted loy the Arahs out of Tioman senlptured stones, aml $a$ tine old lioman bridge spans the ravine on one side. The strects, as in the other towns of farbary, are very narrow and dirty, and the houses mean. In old chureh in the byzantinc style is meluded in the citalel. C. was anciently one of the most inmportant towns of Numidia, called Curta by the Carthiginians, Cirta by the Jomans, tut was long a royal residence. It was destroyed in the wars of Maxentius against Alexanler about 3ll A. L., but was soon reluilt by Constantine the Great, from whom it derives its present name, and continued to sulosist, and was a Hourishing town in the 12th century. Subsequently, it shared in general the fortunes of Algeria (1. $\mathbf{v}$.). C. has manufactures of woollen cioths, sablulery, and other articles of leather. Population about $2 f, 000$, of whom some 2000 are Eiropeans.

CO'NSTAN'TINE I., Flavits Valetites Atree Lus, surnamed 'the Great,' it loman emperor, was born $27=1$ or 274 A.D., at Naissus, in Nlesian Ile was the eldest $\operatorname{son}$ of Constantins Chlorns, and first distinguisherl himself by his military talents moler Jiocletian, in that monarch's famons Eryptian expu, lition, $\because 96$; subseguently he served uneter. Galerius in the l'ersian war. In 305 , the two emperors, Diocletian and Maximian, ablicated, and were sucerecled ly Comstantins ('lhorus and Galerins. Cralerius, who could not endure the lrilliant and encrgetic remius of $(\cdots$, took every means of exposiner him to danger, and it is beliceed that this was the gerionl when he acquired that mixture of reserve, cunning, and wistlom, which was so conspicumes in his couduct in after- rears. At last (1). Alel tor his father, who ruled in the West, and joined him at Boulogne just as he was settine out on an expodition against the lets in North Britain. Constantins died at York, July 25,306 , having proclamed his son 0 h his successor, The latter now wrote a eanciliatory letter to Galerius, and requested to be acknowledged as Angustas. Galerius dicl not dare to cuarrel with G. yet he granted lim the title of C'asar only. Political complicatious now increasent, am in a short time no less than six emprors were "in the field"-viz, (ialerins, Licinims, ant Xnsimin in the last, and haximian, Maxentius his sun, and Comstantine in the West. Bos A. I\% Naxentins laving quarvelled with lis father, fored him to flee from liome: he took refuse with $C^{\prime}$., lut wins marratefnl emonish to plot the destruction of his bencfator, This lreing discoveres, he fled to Marseille, the inhationts of which city gave him up, to (... who put him to death, bing A.  folt it wisest, amd pmonhly alson concerved it rionf. to probect and i.worn it. Sut lee continued to the last whdectad to many paran superstitions. As an empuror. hworer, ho ranks very hirh. He was belowed by his pemple for whose welfare he semems to have hometly laturured. Sevew and even sanminary towarals indiviluals. lee was just ansl moderate towarls matimas. ife conquered every ebemy, organiscel a new ami letter amole of guvernment for
his rast lominions, enushed all conspiracics and revolts, and passed the close of his life in peace.

CONSTANTINE, Paulowtche, a Filssian gramdituke, born Sth May 1779, was the second son of the Emperor Paul I. He early listinguished himself by activity, intellectual ability, and a gallantry liordering on foolhardiness, of which he gave renarkable pronf at the battle of Austerlitz. After the congress of Tienna, the government of Poland was intrusted to lim ly his irother, the Emperor Alexamder. In January 1830, he executed a private deed liy which he resigned his clains to the throne in the event of Alexander's death; and when that event took place in 1825 , he adhered to this resiguation, although he hal meanwhile in his absence been proclaimed enperor in St Putershurg. The succession thus full to his younger lirother Nicholas. The character of C's ailministiation in Foland was not such as to conciliate any class of the neople, and a widely ramified conspiracy was formed. The French Fierolution of 1830 surplied the spark which set all in flane, and ${ }^{\prime}$. was obliged to llee for his life, lut he returnol in commanif of the army of reserve. He died, however, of cholera at Titelusk, on 27 th Jume 1 s 31.

CONSTANTINE, Nimolamiter, mand-duke of Russin, born 21st September 1827, is the second son of the late Emperor Nicholas, and the: brother of Alexamler II. He is srand-admiral of the Russian fleet, and hohs lesides imumerable military oflices. During the Crimean war, he commandel the liussian fleet in the Baltic, and directed the defensive preparations which helil the English and French armaments in cleek before Cronstadt. The leader of the oll Russian party, he strenuously epposed the concessions made to the Western Fowers. In 185, howerer, be paill a visit to France, which was regarded as a sign that he was disposed to assume a conciliatory attitude towaris eivilisation. C. married, in 1845, a danghter of the Inke of Saxe-Altenlurg, by whona he has had issue one son and three daughiters.

CONSTANTINO'PLE, ealled he the Turks Stemboul or Istamboul, was (rininally callet Buamtium (q. v.). In 330 A.D., the Emperor Constantine made it the eapital of the Roman empire, ans called it after his own name, Comstantinngle. From this period dates its importance. It contimuel thenceforth to be the resilenee of the loman, ant afterwarls of the Byzantine emporors, till in 145.3 it was taken by the Turks. Since that time it has been the capital of Turkey, and the principal residenee of the sultans. It is sitnater in lat. $41^{\circ}$ N., and long. $-8^{\circ} 59^{\prime}$ E., on the European sile of the Channel of Constantinople or Thracian liosphorns, near to its opening into the Sea of Mammora, i narrow arm of the sea, called the Gohlom $110 m$. extemds about five miles into the lamd, and forms a safe and most commolious harbour, with water of sufficient depth to float the largest men of war. C. proper lies entirely on the smathern side of the Goldun Horn, and is protected by a wall built Ahring the time of the Byzantine empire, and par tially restored by the Turks. The wall is almont 101 $\frac{1}{2}$ miles in circuit, and is pherced ly 29 gatios. amonest which that of Top-Kapussi, fommery that of St homanus, has a historic interest, as leing the one through which the Thales antoren when they stemend the city, ame whore the liast of the loalainghi then in the fight. The sulmiths of Galata, l'era, anl "hipshanth, are situater on the northern side of the Guhlon 11 orn. On the A intic side of the busphorms lie Noutari and kialikiii (the ancient (Halcedon), and to the morth-wist of the city lang the town of Byub. The city itswif is hilt on lilly groumd, ancl
from this circumstance, and its numerous gardens, cypresses, mosques, palaces, minarets. and towers, it presents, especially as seen from the side of the Goblen Horn, a very splendil arparance. The scenery of the Thracian Bosporus is of almost unrivalled lueanty; and the panorama, of which C. forms the principal part, is such as is perhaps nowhere else to be seen in the world. But a nearer alproach reveals the usual characteristics of an eastern town-narrow, croubed, filthy streets, and miseralle honses of woul and clay. It is only of late that dretling-honses of stone have begun to be erectect. The city contains, however, many fine buiddings, among which may be mentioned the Seraglio, occuprive the position of ancient Byzantimm, and measuring about three miles in circumference; the former Church of St Sophia, now a moscue, a most magmificent structure, paved with waved marble to imitate the rolling of the sea, and hasing $10 \%$ columus of the finest porphyry, markle, aul granite. This structure is in the form of a Greek censs, 209 feet lons by 243 broad, and has a Hattened dume, greatly admired for its lightness, 180 feet alove the ground. At each of its four corners there is a tall minaret. The interior is covered with the richest Turker and persian earpets, and along the walls are recesses with white curtain sereens, where the devout Tuk ean retire for prayer ; while scattered here and there are small raised pulpits, where learned doctors expound the Koran. The other important mosques are those of Solyman, Achmed, Sultan Mohammed Il., and Eyub. The two oleelisks of the ancient Mippodrome, ealled by the Turks the Atmeidan; the Castle of the Seven Towers, now in a state of dilapidation; the aqueducts erceted by the Emperor Valens; the eistern of Philoxenus, with 424 columns of marhle; and the numerous fonntains, are among the other most notable objects in c'onstantimople. The eovered hazaars of $C$. are very numerous, and the goods are displayed with wonderful attractiveness. One feature of C . is its vast number of lean and hunsry dogs, which hanat the streets, rendering it difficult to cobtain a passage in sume places. The dogs are the common property of the city, and they do a consileralle portion of the scavenging. ln the suburb of Khassim-lasha are the rans of the former palace of the Capitan-Fasha, the Lord High Admiral of the Turkish fleet; and mot far from it is the great arsenal, where within recent years immense ships, earrying 140 guns, have been built. Galata, which was foumbed ly the Genoese as a republic in the liyzantine times, is the residence of European merchants and the 1 mincipal place of trade. It contains many great warchonses, shops, and dwelling. hmses, lout is, if possible. even more filthy than $G$ proper. Britges of hoats connect the opposite sides of the Golden llom, Futher eastward, on the busphorus, lies Top-hanib, with the imperial canmon fomblry, a leantiful mosique, and an interesting fonntain. On the hill belind Galata and Top-hanel, is sitmated Pora, the residence of the foreign ambassalnes, whese palanes are consphicuous from a great distance. 11 ere all the convenienees and luxuries of Burupem life are now abundant. Many Grecks and Armenians inhathit Pera. Eyab is inhalited only lay farks, and here are preserved the sernjek-shorif, or the inmmer of the prophat, ant the sword of Osman, with which each sultan is girded on his arcessinn, a ceremony equivalent to cormation.
( $\therefore$. inchuting its sulmus, contains about 500,000 inhahitants. 'The propertion of Turks, Grecks, Armonians, and dews is very varionsly estimated. The mosynes ary more than "in in number. 'lhere , are several lireek chaches, muder a patriareh wath

## CONSTELLATION-CONSTIPATION.

twelve synodal bishops. The patriach is not only the spiritual, but in part also the $t+m$ moral ham of the Greek sulhects of the Porte. $O$. is the residence also of an Armenian patriarch, ani there are several Foman Catholic and Protestant places of worship. There are in comection with the musques alout 300 medresses, or sehools for the memas; thare are also some 400 mekteb, or 'lurkish chen'ntary schoohs: and among the other chlacational institutions is a school of medicine conductod liy Germans, which hiss been the means of much grool. Among the benevolent institutions are mumerous imerets, where fool is provided for the poor, and hospitals for the sick of several European nations. "Facre are puhlic Iibraries, hoth Turkish aud fireek, of which that of the Suraclin is prorticularly rich in the treasnres of oricntal literature; and there are several Tmkish anel Europan printing-presses. In 185.3, two Turkish, one French, one Greck, one Armenian, one Bulgrian, and several Italian joumals were printed; aml within the last two or three years an English newspaper has been establishel. The publie laths and coffechouses are excedingly numerons. Some of the peculiar manufactures of the East are carricd on in leather, carpets, weapons. \&c. But all the manufactures of Western Europe ahound in its markets. Notwithstanding the want of fostering care on the part of the goverment, whose measures have rather been adverse to commercial prosperity, the trade of C. has been steadily increasing, but is by no means so extensive as miglit be expected from its population and situation. In 1850, 17,568 vessels of $3,702,407$ tons burden cuterel, and 18.406, with a tonnage of $3,676,302$, cleared the port of Constantinople. Very nearly half of this commerce, however, scems attributable to the war, which had not been coneluded in the beginning of that year. In the following year (1557) the number of shils entering C. was $855^{\circ} 7$, with a tomage of $2,093,50^{\circ}$, and the number clearing 5455 , tonnage $2,120,550$. In 1859 , however, the commerce had greatly increased (and this increase does not appear to le owing to any extraordinary circumstance), the number of vessels entering being 15,558 , with a tomnage of $3.051,229$, and the number clearing 15.23. with a tomnage of $3,002,066$. The trade is chictly in the bands of Greeks, 1talians, Austrians, British. French, and Germans. The liberal reforms of sultan Mahmoui II.. and the intimate conmection now subsisting with Western Europe, have of late years given to the Turkish capital a much more European appearance than it formerly had. C. has at various times suffered dreadfully from tire. It has also been snbjected to no less thina it memoralle sieges, is of which it withstood.
CONSTELLATION (Iat. con, tomether, and stolle, a star), a group of stars. The stars which stim? the firmament have, from a time earlier than authentic records can trace, been formed into artificial groups, which have received names borrowed from fancy or fable. These proups are called constellations. Though quite deverk of anything like systematic arrangement, this tralitional grouping is found a sufficiently convenient classitication, and still remains the Lasis of nomenclature for the stars among astronomers. Before the invention of almanacs, the risings and settings of the constellations were looked to by hushamimen, shepherds, and seafaring men as the great landmarks of the seasons, and consequently of the weather which each season was exyeeted to bring with it (see Job xxxuiii. 31) ; and it is not surprising if the storms or calm weather that usually accompanied such seasons were connected in the pepular imagination with the iufluence of the stars themselves, or the beings with whom superstition or fable identifical
them. Thus, the risums and settiogs of Bisutes with the bright star Aruturus, which tomk place near the equmuxes, portendul great tempests. So Virgil's Ceporgios, i. ent. The great hat in July was ascribed to the rising of 'anis the long, with
 helincal lasing. The appearance of the twins, 'astor and Dollux, was hailud as the hatbinger of fair sumner weather.

Almust all mations have, from carly times, arranged the stars into constollations, Int it is chichly from the momonclature of the (irceks and lomans that riur own is derived. Euloxus, a contomperary of ['lato, about $3 a^{0}$ years p.c., grave a description of the face of the heavons, containing the names and characturs of all the constellations recoctuisel in his time. Thouch this proluction is loot, a pretical baraphrase of it, written about a cestury later ly Aratus ( $\mathrm{l} . \mathrm{v}$.), is still extant. This frem descrilues twelve zonliacal constellations (sce Zannac), with twenty in the uorthern hemisphere, and thirtem in the southem. The next enameration necurs in the Almagrest of Ptolemy, which includes the preceling, with three allitimal, one northem and two smathern constellations, making in all 48. These are the ancient stellar groups. Large accessions lave been mate to the nomenclature in modern times, in consenpence of maritime diseovery laving male us aequainted with constellitions in the southern hemisphere which never rose uron the world known to our ancient authors. 141751 , Lavalle went to the cape fur the purpose of making a catalugue of the southern stars, and formintr them into constellations-an undertaking which he prosecuted with great ardour for nearly four years at the expense of the French govermment. Flattery has also contributed towards the stellar nomenclature. Upon the restoration of Charles 1 ., the evening before his return to Louton, Sir Charles Scarbormgh, the court physician, was gazing um a star in the northern heavens, which shone with greater luminosity than usual, as might be expected from a loyal star on such an oceasion. This, in connection with a few others, was fromed into Cor Caroli, the Heart of (charles II., by Halley, at the doctor's recommendation. The chief constellations will be woticed under their several names. Nice Aries, Ursi Majof, \&e. The fanciful digures from which the constellations are namm, are depieted on celestial clobes and mapls of the hearens. In the older writers, Cunstellation sinnities the relative poritions of the planets at a given moment. See Aspact.

CONSTLPATION, a state of the system marked by an irregular and sluggish action of the bowels upon their contents, lue ether thinfective sucretion of the juices of the intestinal mucons membraue, or to an imperfection of the peristaltic movements (see Digestiov). Sedentary bahits fredispose to C., as also dues the use of animal forl in ton great a relative amount. The nse of brown breal, or of lentils, oatmeal porridere, of creen secetables and salats, or of ripe fruits: the phoniful emploment of salt, or of saline drinks, or wi many natural mincral waters; and active exercise. espucially by walking or riding on horseback in the pren air, tend to atrert this disease. A favourite romedy with some is the use of a eluth wrung out of cold water, and aphtied to the abdomen; this, as used at lydropathic estahlishments, is callod an 'alndoninal compress,' and is worn under a bandare of macintosh cluth, to keep the moisture from escaping, during the earlier part of the day. But to many persons atfected with ( $C$, and unable from eircunstances to, follown out the plan of life here indicaterl, and to many others in whom the disease does not yiell] to these in ans, the use of laxatives, or mild cathartics ( $1 . \times \mathrm{r}$ ), is almest a necessity; and it is
satisfactory to know that these remedies，if judi． ciously selected，and not employed so as to produce over－action，may be taken dmring very many years withont any of the bad effects often ascribed to them．

C＇onstipation in the lower animals depends，is in man，on imperfect secretion from，or motion of，the intestinal walls．In the horse，it is nsually accom－ panied by Colic（q．v．），and when long contimmed， leads to Enteritis（c｜．v．）．The apropriate remedies are soap and water clysters given every two hours； smart friction and clothe woung out of hot water aplied to the ablomen，with three drachuns of aloes， and one of calomel，given in gruel，and repeated in sixteen hours，if no etfect is produced．Gives， besides，walking exercise；restrict the amount of dry soliel food，lont allow phenty of thin gruel or other fluds，which may be rendered more laxative by admixture with treacle or a little salt．Similar treatment is called for in dogs，cats，and pigs．In cattle and sheep，direstion principally takes place in the large and quadrisected stomach；the bowels， accordingly，are little liable to derangement；and $C$ ， when occuring in these animals，generally depents upon impration of dry hard food letween the leaves of the maniplies，thirl stomach，or fardel－bag．The complaint is hence called jordel－bound．It results from the eating of tough and indigestible food，such as ripe vetches，rye－grass，or clover ；it prevails in dry seasons，and on pastures where the herbage is comse and the water scorce．It occurs amongest cattle partaking freely of helge－cuttings or shoots of trees，hence its synonym of woont－cill．From continuons cromming and want of exercise，it is frequent in stall－feeding anmals；whilst from the dyynu up of the natural secetions，it accompanies most felrile and inflammatory diseases．The millev cases constitute the ordinary form of indigestion in rumninants，are accompanien by what the cowrinan terms luss of cul，aml usually yitll to a dose of salts giver with an onnce or two of ginger．In more protracted cases，rumination is suspended，appetite gone，constipation and fever are present．There is a grumt woticealile，especially when the animal is mused，and diflerent from that acompanying chest． complaints，ly its weerremee at the commeneoment of eppiration．Liy jorsoing the closed tist upwarls and fowarls beneath the short rils wh the right side，the romul，burl，distemmal stomach may be felt．This state of matters may contime for ton days or a fortnight，when the animal，if murclieved， becomes manseated，amd sinks．Atrum sometines precedes death，whilst in some seasms and Iocalities most of the bad cases are acempanimed hy exeite－ ment and freney．In this，as in other resprects，the
 the lemer．

Troutment．－Five margatives in large doses，com－ linines sevaral tue ther，and exhibiting them witls stimulants in plenty of dhid．For a modium sisod wx or cow，use $\frac{3}{4}$ ith e each uf common and Ejusnm falts，ten croton leans，and a lrachm of calninel，with three ommes of durentine；and amminister this in ladf at cration of water．Ii no ctleet is produceal in fwenty hours，repeat the dose．Withheded all Folid fomil：ebonarace the animal to drink grand，
 －lyators，and vecasiomal low lonmentations to the leilly．

CO'NSUISSTANTINTION. See ThansubstanTIATION.

CONSULTU'DINALY LAW, is that law which derives its binding character, not from the expressed, but from the tacit consent of the gencral will of the community. As it is generally trausmitted from age to age by oral tralition and universal custom, and is rarely embndied in any positive enactment, C. L. is often spoken of as mwritten law (low non seriple). The eustomary laws of Normandy, Firittany, and some other provimees of france, however, were rednced to writing; and with us mueh of the common law, both of England and Seotland, now rests on statnte, as well as on custom and usage. Even in modern practice, usage is often resurted to as the best interpreter of law. Of this a familiar example is the impurtant part assigned to mereantile usage in construing the law-merchant. In this case, the custom must generally be established by evidence, in place of being taken for granted, as are the laws of 1 rimogenitire, legitim, terce, coutesy, and the like. "The edfect of custom in repealing statutes will be cousidered muler Deseeture, See also Common Liw.

CO'NSUL, the title of the two highest ordinary magistrates in the loman repmblic. The etymology of the word cannot be mrecisely deternined; thins much, however, seems clear, that it implies that there were nore than one-that there were colleagues. The idea of two supreme maristrates, or joint-presidents of the state, seems to have been interwowen with the carliest conceptions of political organisation in lone. Accombing to tranition, there were at first two kings; an! the constitution of Servins is said to have frosided for the sovereigu power being again divided between two functiomaries. But it was not till after the expulsion of Carouin that Lucius Jumius bratins and Licius Tarqumus Collatimus wore chosen joint-lieads of the state. 'These chief-magistrates sem to liave leen at first called mortores (lealers, i. c., of the armies), and tle title of consules to have been introduced abont 301 E. C. At tirst, the comsuls seem to have dificed from the kings in little else than their limital temure of oftice, and the jower whel their fellow-citizens retained of calling them to account at its temmation. They never assumed the erollen crown. but thein dress in almost every other respect was regal, and they lad ivory seeptres smmomed by eagles. In public assemblies, they vertipiel a sort of throne (sella corulis), and in the senate they presided and sat on elerated seats. They made peace and negotiated foreign allianses, Jad the supreme command of the army, and aprointed the puhlic treasurers. They Inkcwise excreised the judicial functions of royalty. In theiv capracity of sumprme judges they eontinued to be known as purctores, until ultimately separate macistrates with that title were appointed. The symbol of their authority wos the limmle of rods (fiesces), with the axe in the cantre, which was earnied before them by twelve lictors. For a considerable perion, the consuls were chosen exclusively [rom the populus or patricians, as opposed to the plets; and during the long strughle between the patricians aud plebeians,
they sided invarially with thoir own order. At
 photis, wore apruintel] is is surt of lemocratice rivals to the aristocratic ransul⿻. To thom was assignofl the duty of presidiaif in the assomblies of the plebeinms, as the cmisula did in the rother assemblies ; and thometh they combl mot dietate, they wore: antitleol loy their eqfo to arrest monsures firecomliner on consman or somatmial anthority. 'The rosult of this rivalry was that thre consulship was
 lurion of the compirs, the consuls were fredenently fleheians. In acoordance with the omlinary enarse of political devolopment, the organisation of the lioman state buenne more complieated, in pro. prortion as it became inpossibla for the ${ }^{1}$. to hiselarge in person the siurions duties which in the legiming always centre in the possessors of supreme porver. la $44^{2}$ F. © censurs ( 1 l v.) were alpeinted. In 36 br, pators had the chier judicial functions of the consuls assigned to them. In the grovernment of tha provinces, the ail of the former consuls was eallerl in, the $U^{\prime}$. thus apprinted having the title of pro-coment. In surdien and critical emergencies, the comsuls were either superseded ly a dictator (1.v.), or aloscolute power for the occasion was conforred on them ly the decree uf the senate, which ran in the famous formula: Viblunt consules ne quild respublice shotrinenti appiat
"Luet the consuls lienk to it, that the state take no harm.' The wath which the comsuls trok mu entering oftice they were oblicel to repeat as a doclaration, nut of intention lont uf fact, on quitting it at the col of the year. 'The consuls were imanomated by a great procession to the Capitul aml an sacrifice to Jupiter 'apitolinus. Thu sladow of the consulate surviven the downfall of liberty; but the elsetion of the eomsuls was taken from the people and eonfermed on the senate. Then their number was inereased; they were divided into classes- I. ordinurit, suffiefi, honoreria, sec-till at last the vitice lrecame a mere honorary appointment conferred liy the emperar.

The title of ( ${ }^{\prime}$. was revived in the Frencl rebublic. See Consulate.

GONSTLL, MERCAstile, the mame rimon to those offieers whom the state maintains in foreign conntries for the proteetion of its trank, and vimelication of the rights of its medeliants, ame to whom the [unther duty is assigned of keviner t]e home gosermment infommed of all fatets hearing on the commarial interests of the eommtry. 'The practice of appointing such wficens urigimated among the trading commonities of laty abmot the midelle of the 19th e., anl madnally extomedel itself: and in the lbth co, lail loun inlopted liy all the cuntries of Eurojue. In alilition to their cmmmercial duties, others of a more strictly folitical kind were frequently emonted to comsuls in places in Which there was nu imblassarlur "r $]^{n}$ mitical agent. In almost all the comotries of Empule wosnls are dividal into comsinls-beneral. comsuls, vice-cmsuls, amt eonsular adents. The $\because$ 's tirat duty ow his arrival, is to exluibit his commission to tha anthorities of tlee conantry to which be is accocelited. in ordra that lue may ibtain thair sanction to his apowintment. This sanction is commanicated to him in a docmanent ealled an capuator, which secures to hime the enjoyment of suble 'frivilewes immunties, amh examptions as have hecn cnjored lyy his prente cessms and as are msually manted to consuls in the country in which he is toreside.' The general ctuties of Enulish consuls are commmonated to them in rinted instnactions. In these the ( is ordered to $^{\text {is }}$ mak" himself embersant with the laws and reneral primedpes which relate to the trade of Great Britain with foreiga parts, and with the language and
muricipal luws of the conntry wherein he resiles. Further, it is his duty to 1 notect his comutrymen in the lawfin exereise of their trade, to quict their dificrenees, to wain the redress of injuries done them-falling which, to report the matter to the Englishambassadm at the conrt of that mation-and to forwarl to the secratay of itate for Forcign Allaiss an amnal return of the trade carried on at the diffurent prorts within lis comsulate, as well as a quaterly accomat of the marliet pries of arrienltmal Itwane Inring each weak of the puarter, the conrse of exchange, de. The 0 . mast aftom relied to Eritish seamen or other subjects wrecked on the const, and emlenvomr to prowe them the means of returaine to Eugand. 'The commanilers of Chuen's ships tomehing on the const are catitled to call on lim for intelligence, and and in promring supplies of water, movisions, and the like; and it is his duty tu entenvom to regurer all wrecks and stmes, ke, of Queen's ships, whether fomm at sea amblunint into the port at which he resides, or thrown on the const. As regrarls the 'privileges anl immunities' of a C.. it is dumbtenl whether he is in any ease exempt from the civil jurisuliction of the state to which he is aceredited; amb in the case of a tratiog C... it is at anymate plain that he is not. But a!. sent out from this conntry, incl not cowaging in tranle, has always been exemptel from the tixes of the eountry in which he resules. He is generally promitted to call in a grand when le requires it fur Ins uwn safety, or the peservation of disciphine: and in contries not inhabited by a European population, he has all the privileges of an ambassador. A (. can peromm all the acts of a notary-mblic; all remis exeeuted by him lowing acknowlediged as valid hy our couts of law. The fiction is, that the consulate is the territory of the country from which the $\mathcal{C}$. is sent, and, eonsiamently, that decels and acts dune within it, or maler the ( $\because$ 's seal, are done in Englaml. Hence the mariage of British sulijects recrided im the hooks of a British C. is a valud ceremony.

Consiflering the marmificent name which they bear, and the real importance of their oflice, buth the rank and remomeration awarled to consuls by this conntry are certaindy inaleytate. Eyen a consul-general ranks wnly with a $\mathrm{p}^{\text {wst-captain in the }}$ navy, or a major in the army: a $($ a, with a commander in the nayy, or a cattion in the army. The more important matter of renmuctation is scarcely more satisfactory. A few consuls-gencord liave f1500, $£ 1600$, and even 21700 a year, lut consuls, on an averare, prolahly do not exced $\pm 400$; whilst vice-cmasuls as often receive under as over dotu, sumetimes 2.51 , and consular arats even $\mathbb{E} 40$ a your. "The unsatisfactory condition of the comsular scrvien of this comntry has been a sulijuet of frequont romark aml diseussion.

ministers, ambassadors, members of the Council of State, military and naval officers, and all civil and crimiual judges, except justices of peace and members of the Court of Cassation. His income was fixerl at 500,000 francs, and that of his inferior colleagues at 150,000 francs each. Bonaparte took up his residence at the Tuileries, and held a splendid crmet. By resolutions of the seaate, in May 1802 , Bonaparte was re-elected for $I 0$ additional years, and in Augnst of the same year was made First C'misnl for life. In the appeal made to the nation, ont of $3,577,2,9$ votes, $3,568,885$ were in farour of Bonaprote. 'Ilve arlulation of the senate and people now knew no limit. Nothing but the inperial name and insignia were wanting to complete the picture of absulutism, and these were supplied, May IS, 1.4nt. when Napuleon was ande emperor.

CONSU'MLPTON, in medical language, Phthisis, Talies. Marasmus (4.v.), and more particularly l'hthisis P'umonalis or pulmonary C., is a disease of great frequency and severity, which, in the civilised bations of Enrure, rranices from one-sixth to one-tenth of the total mortality in ordinary times. It is uncertain whother there is any part of the word, on any race of men, exempt from C. ; this exemprion having leen at diflerent times clained for the inbalntants both of hot and cold elimates, as fou India, Anstralia, Canarla, Iceland, \&c., but in most instances in consequence of imperfect knowledge of the facts. On the whole, C. appears to be one of those diseases that lave a tendency to increase, unless great eare lie taken to remove conditions unfavourable to the public bealth, with the increased argregration of the lmman family, and with that extenderl intercourse which is one of the conserquevees of an alranced civilisation. Hence it is must fregment and most fatal in towns, and most of all in those that are near the great centres of intercourse; while in remote mountain districts, in islauls cut wil by a wille ocean from the general strean of human communication, it is commonly stated to he, and probably is, comparatively rare. As a rule, however, the presence of this dreadful scomore has almost invariably been discovered to a grater or less extent, wherever the canses of mortality have been carefully examined under enlighttomel medical smperintemlence: and we are still very far from having acpuired such an insight into its laws of dithiom, as to be alile to deduce from them any exact loctrine as to its causation. C. affects buenliarly the young, especially thoso in the first perion of adult life; though it is nearly cortain that the secis of the lisease are commonly somm in the constitution in youth, aml even in infancy. Its relation to sex is rariable, being apparently determined in part loy the preduminating nceupations, and the hal hits of living. of the promation. It is often wserval to be plainly inherited from one or other prament, most fromontly the nother: and it is one of the discases which has heen stated to be frequently divelund as a conserpence of the marriage of consins or wher near rilatives, especially when the parcutal stack is itself tainton? or not free from suspumat In life-insurancon all these circumstances ar usually carefally wougheil by the medical onficers uf companios, as the urnumes for almission or rejection of a candidate for insurance: and nothing is more cortain to canso rejaretion, than a well-grounded suspicion of a consumplive terndeney, either persunal or derixal from the pravests, or sliewn in lowthem aml sistore. It is therofore a fair subject for comsiluration, "n rrmumb of urdinary pruslence,
 tions, whother those afficeded with this malaly, or strongly forlispusel to il, maght to enter into the marivi state, thul to incme the probable atlictions
and responsibilities connected with the maintenance of an unhealthy family. It has even been proposed to lerrislate on this sulgioct; but sober-mimerl political economists will probally always eonsiler that it is in vain to constrain hy liw:s the stronerest instincts of humanity, especially when the applica tion of the law must depend upon such refinal distinctions as in the present instance. "lhe sulpect is clearly one for an appeal tis the reason and comsciunce of individuals, liuthor fhan for an attempt to lay down theoretical rules of conduct; hat those who would gnide their lives ly principle, and who would not rush into marriage from the infurior motives alone, would do well to take it into serions consideration.

Among the determining causes of $C^{\prime}$. in large populations, the best ascortained are those connected with overcrowding and band ventilation, supecially when connecterl with all the depressing influmes inherent in poverty, or associated with :u zekless and abandoned life. It is certain that sumch might be done to improve the public health in this respect, by more attention on the part of the employers of labour to the comfort ant habits of those who are, in more senses than one, their 'hands,' and the somrces of tbeir prosperity. A certain amount of improvement has, modech, already heen effected by the improved living of the workingclasses during the last twenty years. Stall it is well known, and proved by careftu inquiries, that the workshops of tailors, printers, bakers, and other Jusinesses carried on in close, ill-ventilated apartments, by large numbers of workmen, are, in a very aggravated sense, murseries of consumption. Cotton and linen factories have also been shewn, when ill regulated, to be largely responsible for the death of their inmates from this disease. The finest regiments in the army were proved, some years ago, hy evilence before a royal commission, to be decimated l,y this disease in time of peace to a frightfu? extent, in consequence, probably, of the bad rentilation and deficient comforts of the barracks. The cutlers and needle-grinders of Sheffid aquear to owe their notorionsly short lives to C. , bromerht on by the inhalation of metallie particles in the close and stifling atmosphere of their workshops. The stone-hewers of Elinburgh and Glasgow, and the colliers of the Lothians, were some years ago in a similar predicament, from the inhalation, in the one case of stone-dust. in the other of lamp-smake mot sutficiently diluted with air. And even agricultural labourers, in many parts of the cometry, suffer from C. to an extent that is quite appalling, owing to the discomforts, and particularly the cluse and overcrowted condition of their dwellings. It is lamentable to think that such evils as these exist, and that they might be to a great extent avoided; but this conchasion appears to follow legitimately from the evidence that has been alluced of the intimate connection of C . with overcrowting and a diminished supply of fresh air in workshops and dwel. lings. Some years ago, Dr Guy published the cletails of an inquiry into the bealth of the journeymen printers of London, from which it appeared, in the clearest manner, that the liability of these workmen to spitting of blood, and other well-known sympitoms of C ., was in exact pronortion to the degree to which they had been subject to the evil influences of itlventilated workshops; and the marked improvement in the bealth of our prisons in the present day, has likewise been shewn to be do a considerable extent due to the diminished prevalence of C . among the inmates; which, again, is attribnted, on good evidence, to the improved construction of the edlls, and the increased facilities for wholesome exereise and occupation given to prisoners under confinmment for
lemgthened puriols. It has even been panasibly mantammal, that in sume of our monlern jals 6 is less prevalont than it is among the general population of the dilusu's from which prisoners are chiotly talsin ; so that the fact of confinement, and the depressing iniluences of a peral discipline, are more than comoterbabned by the effect uf a rugalar life, Wholusome lont phain ford, and a suffisinut amount of occopation to maintain mind and hody in a sound statr. K以"n umitting, therefore, that the causes of $1 \%$ may he in part pactically irremosialla. thate suems mu reisom to doubt that very much mingt be done to diminish its frevalence, as well as to arrest its course when already formed, by tan. attration to the comfort of the labouring fopulation, buth in their dwellings and in the prosuit of thoir datly ocorpations.

The in meral symptoms of C. are patent to every eye; the more accurate apreciation of them, how. ver, and the use of the more strictly medicial means For detcetiog the disease, and jutging of its pooress and probable issue, are amoms the nore dilicult of the duties of the physician. 'The disease often escapes attention in its early stages; yet not so moch from the alosolute difficulty of its detection, as from the insidiousness of its invasion, and the small alarm which its early symptoms excito in the mind of the suflerer, and even of his friends, when much occuphid with the business of lite, or when naturally not crifted with the faculty of refined abservation. Whenever a young person appears to luse thesh and strength withont known counse; when the colsur changes much from day to day, and from bour to hour; when shiverings are comphaned of, or even a sense of too great chilliness, alternated by flushings and an oppressive warnth, or too copious perspiration; when with these symptoms there is congl, however slight, or pains between the shoulders and about the shmuler-blarles, or below the collar-bones; when there is an occasional tembency to spit up small quantities of bloom from the chest, or when the patient is suljeet to rejeated attalis of catarh (q. v.), or when the lownels are habitually loose or very irregular, or When with any one of these symptoms in the female there is diminution or suppression of the usuad periodic discharges, it is not too soon to apprehend the vecurrence of $(\%$, and to place the matient muler melical antrice. In some instances the alam mas alpear gromalless, and health may rapidly return under alproriate treatment; lut a far areater. danger is that these symptoms, being ovorlooked or neglecter, may prove only the procursurs of a more apparently serious attack of disease, and that the first suspicion of C. may arise thly after irrebarable mischief has taken place. In enomal turms, it may be saill that during the feritul of andescencei. e., before the boly has assumen! its full developro ment in reqarl to strength and wejeht-no consilerable check to its arlrance in throse respucts ought to pass unnoticell, more especially if attendud with babitual feverishuess, cough, or other symptoms of impaired health.

Attempts have been made to sher, that a neenliar halnit of bonly or flyysical conformation. arart from disordcred health, is to be regardel as predisposing to C.; aml this has been called the mhthemal diathesis (i. $\%$ ), lut little or no depundence can be placel on any such inlications, for this disease unquestionally occurs with nearly equal frequency in all the physiolofical parieties of the homan cace, when expused to its exciting and predisposing causes. 'I he experienced eve of the physician, huwerce, will often discover the larking germs uf this insidious malary. even when active symptoms have been long absent, or have recurred after a lons
period of ermparatively grod health, ly the effect of furmer disease uron the development of the frame in the geriod of childhood. For a similar reason, the use of the stetheseope ( $q . v$.), and other means of minutcly examining into the state of the chest, wilt sometimes detect a wholly unexpected attack of pulnomary C . in persons who sulppose their lungs to he guite sound, wr who have forgotten that they were ever subject to disease. As a rule, however, the sympitms mentioned abnre are ןretty safe griules as to the commencement of C ., if care he taken that their gralnal progress does not cause them to lie overlowked. In a few eases the disease legins otherwise, the form being that of an acote attack, such as fever or inflummation of the chest; bunt such cases are of course at once detectell, as being serious enough to require medical advice.

The further medical history of $C$. is very complicated, aul can harilly be treatel of with alvantage in a work like the present. Generally speaking, the progress of the disease is marked ly the following symptoms: progressive emaciation, with halitual fever and frequent sweating at night; cough and pains in the clest, with expecturation of mucus, and, in the cmul, of pminulent matter in large quantities; diarrhea (1. v.), and sometimes obstinate romiting, oftener failire of the appetite, with oecasional siek. ness; gradually increasing weakness and indisposition for active exertion, often with more or less difficulty of breathing on exertion, but rardy with extreme distress or pain of any kind. This remarkable freedom from achte suffering is padally one reason of the self-deception nsually attrimutell to consmptive persons, liy which they are led to belice in their curability ny to a very adranced stace of the disorder.
The degree to which © ${ }^{6}$. is curalle has been a fruitful subject of discussine of late years. Pruperly Speaking, there never has becm any dount that cases marked ly all the symptums of $C$. occasionally, and ewen pretty frequently in the carly stages, get well; lout it was arguel that these were probalily not gemine instances of what is now alune techmieally called 4:-viz, tulerenlar disense. In France. where numbid anathny was extensively cultirated in the leginning of the present century, ther incuralifity of the twherevar form of 6 , was a general doctrine of the sclumds thll the time of Laemuec (I. w.), whe, ly multiplied instances, and careful ohservations on the dead bonly, shewed beyond all question the neensional arrest esen of alrancel 's, anm the frequent cure of it in the carly stanes. The appearances in the luncs, and other organs of persons affecten with C., will he dischssed umder Tr perere.

The treatment of $C$ is a rery complicated sulpeet, and one much misunderstond, partly owine to the uisergeresentations of quacks, and partly frum the preat innaml for palliative remolies on the part of fationts an! their friends, temting to msenre" the trme primplas of treatnent even to the mim of the physician. It is, hawerer, now well ascertane d thit tha sreater part of the cure emsists in leyminnie mantues i. e, the ragnation of the monte of living the nexpmpation, the dhet, the clathing, the fomb, the lemers of repnse. de., if the vonsmptive aul all tratmont hy drass is manally regarded ley weil. infuranal physigimes as sulmerinate to thiat jurt
 "atent, and in a linnate whicll alnits of the onjerylume of such is life even in winter, is the lesest

Moreover, to many men a regular occupation is really a necessity in more senses than one; and to hreak will the asseciations of halit in a person debilitated by disease, and not capable of seeking new sources of excitement, is to poison the springs of enjoyment, and render the remainder of life a lurden. Many consumptives have been sent abread only to die, and in all probability to die more miserably, and at an earlier period, than if they had remained at home. On the other hand, the farouring influences of climate are by no means to be rejecten, when they can be obtained in accordance with the patient's previously formed habits. and with due regaril to his means of occupatiou and prospects of exentnal cure. A varied and wholesome, lont light and unstimulating diet, including ahundant dairy produce; flannel coverings next the skin, and cluthing which is warm but not oppressive; a well-ventilated sleeping-apartment, with a molerate lire in cell weather; bathing in tepid water; the use of a respirator or of a light weollen covering for the mouth and nose in excessively cold weather; avoindance of late hours, crowded roons, and crery kind of dissipation: avoidance also of drunghts of cold air, and of sitting in damp clothes or with damp feet; these are the principal circumstances to le kept in view in the ordinary regulation of the life of a consumptive patient. The use of coll-liver oil bas been very popular of late years in the treatment of $\mathcal{U}$; ; lnit may he reasonally doubtell whether the reputation of this remely be the to its powers as a mediciue or simply as a fattening fool. Oceasional small opiates, and other medicines to arrest irritating cough and suluhe fererishness, and in special cases the treatnent proper to the complications, such as diarrhon ( f . $\mathbf{r}$.) and breathlessness, are generally admitted as nseful aljuncts to the neans alove mentioned; but they ean hardly be disconssel in this phace with atrantage, and shomld lue in creneral used ouly nuder merlical advice. Sce Ancell on Tubereulisis - on l'hthisis (translated for the Sidenlam Nociety).

Consumption in the foner Animals.-C. rarely occurs in horses, the health-depressing influences which promuee it in man and sther animals inducing in then filanders ( q . v ) and Farcy ( q . v .). It is also rare among dogs, but is common in oxen and sheep, ans still more so in pigs. It is one of the chicf canses of death ammust the apes and other denizens of onr zomlogical cardens. It is proluced, as in man, ly mercrowhing damp lalging, laul food, neglected indrs, mul the like debilitating canses. It is notorionsly hereditary; is frecquently develoged ly lreching from parmits nearly related to each uther, and mostly affects animals of fanlty conformation, preailins, for "xample, anonst cows with motll thin necks, marrow carcasses, hollow flanks, and lirty muhalthy-lowking skins. Snch animals are, monnewer, sulpect to dysuntery: impeul, the two
 in scrafuluns stato of systhm: they oceur in the same stomse and uften s.,place each inher in lifferwit praprations. lu all iminals, the wellmarked symptons are bery malumens, In enws, appetite and rumination hemerne irremlar; the enat stares, the skin is dre, and firmly allorent to the rits; the animal is dull, hases thesh, is sumptimes feverish, and if in milk, the sucretim is diminishen, hues and pon' : a timbline conch is cossily excited; and diarther is randily set up, and une: established, is arrestorl with diftionty. As the disasse advances, 1h. Lympatice alinds about the neck ame neswhere
 Uhe pulsw is wak ami quick; the exerctions are fintisf; and purwhent lischarges trickle from the "yes and nustrils. (\% in the lower animals is
certainly curable, especially in the canlier stanes. 'The treatment consists manaly in attontion to reginam and aliet, with careful protection foon slandp sold,
 be groul, assily thgestme, and morishong, ant the capricious appetite toaxal by frequent varlety. l"ur cows, linseed on other eomveninat oleagimons articles shemal be freely used. Irremularity of the horsels maty be remedied hy an occasional a dose of treacle, or by a small quatity of linseal or of eastor nilf lat active purgatives, and, inlecd, all powerful and irritatiog Arous, most be avodid. A fow simple tomies may sometimes be whisable. ( $\therefore$ might be greatly limitad by rejecting. for brealing prorones, all aminals having any tuberenkos taint, anel by grater attention to tha foching, shelter, and warmath of Foung stock. Neglect of these latter preantions is the canse of its unosual pevalonee amongst the young cattle of the more expusal parts of war cobstern cuast. Its connection with overerowiling and fibulty sanitary arrangements, is evident from its frequent ocenrence amongst the cows that have for several months been inmates of our badly manayed town-dairits.

CONSUMPTION, in Political Eennomy, is the converse of Production (q. v.). The word is of very frequent use by political economists, fut it has newer had a definte meaning att:uehed to it. It may lw generally said, that everything which is produced or made by human labour is to be eonsumed, or to crase in its turn to exist. Dut there is not only a great difference in the rate at which things are consumed-some going rapidly, while othor's last for centuries - but there is a 0 . which is amihilation or loss, and a C. which is in reality gain, ur an adrlition to the wealth of the world. Fuod is an article of production destined to be immediately consumed, but the food of the working-man sustains him while he is prodncing more than he consumus. A thousand poumels spent in improving a thonsand acres of land, or in bailding a house, produce smate thing which lasts for many years ere it is eonsmmed or rendered valacless. The same sum spout in rasing a wheat crop will secm to be immediately consumed, hat it may have in reality been laid ont more beneficially than the othem, through the mocess of reproduction. If the thousand prounds laid ont on land inereases the value of that land so as to make it worth eleven humbed ponmas, while the wheat rased by the expentiture of the rither thousand is sold for fifteen hundred pounds, there is less $($ : in the latter expenditure than the former. If the thousand pumuds, on the other hand, be expended on squils and sky-rockuts, the $($. is greater still. The makers of the squibs and skyrockets no doubt live, lut it womblend less to $($. if they lived by maling something that would last.

CO'NTACT. In Ceometry, two lines, one of which at least is curvel, are said to be in (! when they have a common pront from which they recede. in such a way that the deflection of the one from the other will, if a sutliciently small departure be taken, become as small a fraction as we please of that departure A complete fiscussion of the nature ind order of (. can be obtained only ly means of the differential calenlus.

CONTACION, the communication of a lisease from the sick to the healthy, wither by diaect contact of a part athecten with the disease, or throngh the medium of the exeretions and exhalations of the looly. Sume authorities have empluyd the term infertion ( 1 . . . .) to designate this latter metlom of commmineation, and have correspondingly limeted the meanimis of the word C . : but no practieal emul is servet ly this retinement, amb it has indecd led

 has come umber its immediate olsorvation, or loy
a summary complaint at the instance of the public prosecutor, where, thongh not committed in the immerliate presence of the court, it has relation to a matter which is, or has lieen recently, in dependence luffore it.

## CONTEAPT OT PARLIAMENT. See PAR-

 LTAMENTARY I'HiNLEGE.CONTI. Hotse uf, a branch of the House of Conde (q. r.). Armand de Bombm, tirst pince of C ., and brother of the mreat Comde, was born at Paris in 1629. The twok his title from the little town of Conti, situated five lagnes from Amiens. Of a feeble constitution and defumed shape, be was eanly destined for the chumeh, but the fame of his brother inspired hime with military ardonr. II commenced his martial carect as the opponent of his brother, but soon enterel into alliance with him. Aftel 16.5 , he retirel from the world, and gave himself up, without reserve, to devition. The died at Pezenas in 1666--Locis Armasd, Prince de Conti, Comte de Fezenas, and peer of France, eldest son of the preceding, was born in 1661 . After a short career in arms, he diel of smallpox at Fontainbleau, ith November 1655. He left no children, and was sucecedell by his brother Fravcors Locis. Prince de la fioche-sur- Yon et de Conti, who was born at laris in 16it. This was the most remarkahle memler of the fanily. Educated under the cyes of the great Conde, he early conceived a lassion for leearing arms. His first campaign was male in Humary, where he distinguished himself; but having fallen into disgrace with the court, he was banished to Chantilly, with striet orders not to leave it. The great Conde, before his death, persualed Lous XIT. to pardor him. Sulsequently, C. served under the Buc de Luxembourg, who was warnly attacherl to him, and took a brillinut part in the victories of Steinkirls and Neerwinlen. In 1697, he narrowly escaped being male king of Poland. On his return to France, he was still coldly received by Lnuis, who, however, was at last forced by disaster to emphoy lim. He received the command of the army of Flanders in 1709, but died on the sod Felruary of the same year. Massillon pronounced his funeral oration. Saint-Simon, in his celehrated Mémoires, thus sjeaks of him: 'He was the delight of armies, the divinity of the feople, the hero of officers, the alarling of parlianent, and the adniration of the most learned sarans.' - The list member of the House of (C) was Lueris Fraveors Josepi, born 1734, died in spais $180 \overline{7}$.
co'NTINENT. Though no mathematical distinction has ever been dirawn between a $C$. annl an island, the nsage of language has generally recognised tive great masses or divisions of land as eontinents-Europe, Asia, Africa, America, and Australia. Furipe, Asia, and Africa form 1 rofurly one great 6 , the only one known to the ancients: the secom was discoverell by Columbus; and the third inale its appearance at the antipules of Enrope in the beginning of the 17 th century. The existence of an antarctic $C$. has mot yet men satisfacterily estah hishel. The aprarcut irregolarity in the share of the contincuts disappears on marer examination, and certain uniformíties laemer aphant, the canses of which havo lang heren subjects of speculation. Baena remarkel, that the. continents wo pe pointol thwaris the south pelar sira, and prescmtenl hroal combormations towarl the north. J. I: Forster fullowed up this renark fy the gram ralisation, that these sumethern fuints are the conds of namentan rames, which are continnel northwardy; :nin] that at the censt side of therse

archipelagos of islands, while the west sille of the continents is indented with large hays.
Not only have attemplts lieen wide to reduce the horizontal outlines of the continents to rule, but their vertical dimensions have been examiued with the same vier. Olservation hal heen confined to ascertaining the heights of indivilual summits, until Alexanter ton Hunboldt emriched 1hysieal gengra, hy with a new numerical element, by enteavoluring to determine the mean height of continents -i. e., the eleration of the centre of gravity of their mass. He estimatel the mean height of Eurole at 113 toises (a toise is about 6 feet 6 inches), of North America at 117, of Sonth America at 157, and of Asia at 150 trises. Laplace had calculated the mean height of all the coutinents at 1000 metres: Humboldt found this too great by two-thirds, and gives the height of the centre of gravity of all the continents, except Africa, aloove the sea-level at $30 \%$ metres, or 1007 feet.

CONTINENTALSYSTEMI BERLIN dechee; orders in council. The C. S. was the name given to Napoleon's plan for shutting England wint from all comection with the continent of Europe, and thus compelling her at least to acknowlelge the maritime law established at the peace of Utrecht. See Neutrality. This system legau with Napoleon's famous 'Berlin Decree' of November 21, 1506, which declared the British islands in a state of llockade, and prohibited all commerce and compespoulence with them; every Englishman foum in a country occupied by French troops or ly their allies was declared a prisoner of war; all mucrehandise belonging to an Englishman, lawful prize ; and all trade in English goods entirely prohilited. Xo ship coming direct from England, or from a Britisl coluny, was allowed to enter any port; and any ship seeking by false declarations to evale the regulation, was confiscated with its cargo as if British property.
Eucland was not long in makiag reprisals. By an 'order in comencil' issued January 7 , $150 \overline{7}$, all neutral ressels. were prohibited from entering any port belonging to France or her allies, or under her control. Every nentral vessel violating this order was to be contiscated with its cargo. Still more oppressive for nentral commerce was a second order in comeil of November 11, 1807, by which all harbours and phaces of France, and her allies in Europe and the colonies, as well as of every conutry with which Eugland was at war, and from which the English thag was excluled, were phaced umer the same restrictions as if strictly llockaded. These orders were fillowed by reprisals on the French side. By the Milian Decree of December 17, 1507 , strengthened by a second of January 11, 150s, from the Tuileries, any visscl, of whaterer mation, that had been searched hy an Enulish ship, had subnittel to be sent on a vorase to Englam, "r mid any duty to the English wevernaint, was to he declareld denationalisd, and treated as English. In urder the moro Affectually to atuililate English commorce, there appared, August 3. 1810, the tariff of Trianon for culmial gouls; this was extembed ly a decree of 12 th Sertemher, and wn the 1 th Oetoler followed the Decree of Fontaind dan, ordering the burwing of all English grents; an order which was to be carrimel nut with mare or less modification in all comentries commertel with France.
The consequene of the ${ }^{2}$ : s. was undoultedly the springing up on the continent of mary lranches if matmarthree to the prejuntice of England; on the other hatm, the price of fureign produco rose to an extramplinary lugint on the contineut, mabling a few commercial mon to make fortunes, but seasitly aftectug the dauly comfort of tho
middle classes. This vinlant intirruption of luman interoonse and sociability was in monatmal condition, which conld not last lonif, and comld only serve to strengthen the hatred of liuron against French tyraniy. Aceordinerly, with ther lireak ing up of Napoleon's puwer, the ('. S'. Fell ta the grount.

CON'TI'NGENCY, in Law, 211 (vont, 13", ofar rence of which, though macretain, is sulliciontly mrobable to he provideal for. 'Thus, cuntincut debts, loy the law of seoulamd, are takon into account in estimating the clains un the cstate ot a bankrupt, though in eomtingent croditot is ant entitleal to concur in a petition for serpastration, as to vate in the elcotion of a truster, until his daim shall be valucd.

CON'I'NGEN'T is the quota of tronns furnislax to the conmon army by each member of an alliance of confederation of states. It is especiatly aplilical to the proportions contributed by the several German states to the army of the condederation. Sce Gehmany.

CONTINUED FRACTIONS. See Frictioss.
CONTOTRNIATE (Ital. contorno, Fis. contom ${ }^{\circ}$ ), a term applied to a class of antipue medals, which have a deep line cut round the edge, like a furow.

CONTO'RTED STRATA are beds wheli are bent and twisted, so that in a section their erles would be seen to follow crooked and curred linus. often doubhing baok and ruminer altomether out of their former course. An acount of extensive ('. S. will be found under the article AepsLachidss.

CO'NTRA, a term in Music, meaning opposite. lower, and applied to the alto ami temor parts when they form the lowest part in the harmony. When a purt Jower than the usual hass is emphoyed, it is called contra-basso. $C$. is also used $1 n$ arginnbuikling, to indicate that a certain stop, or register of pipes, is an octave luwer than the usual pitch.

CONTRA BASS, or VIOLONE, the larest species of stringerl instrument, ommmunly callell the double bass. In Eritain, this class of instrument las theee strings, the lowest being $A$, a minor third bebw the low $\mathbb{C}$ of the violoncello: the nost is a fometh
 This manner of strinering is defective, as all the great masters have writton for the C. B. down to E , for which reason the (ierman instrments have all four striugs, the lowest a forath bum onr low A. C. B. is also the nume of an orean stop of 16 feet piteh.

CO'NTRABAND OF WAR (Lat. contra bemmem, against the proclamation), is a name apllied to certain commolities, or the mles relating $t^{\prime}$ thenn, during hostilities between states which acknowJeage what are ealled the laws of nations. One such law is, that nentral nations must not carry "n, for the advantage of either of the belligerent powers, any branches of commerce from which they are excluded in time of peace. Another is, that the mame of C . of W. shall he given to such articles as pertain to military or naval warfare-cums, ammunition, and stores of all kimels. Linless there are special treaties, defining exactly what articles are C. of W., the interpretation of this law often leada to much embarrassment. Another law insisted on by England during the last great war was, that each belligurent shall have a right to visit and examine neutral ships, to see whether they carry any articles which are C. of W., and which seem likely to be intended for the enemy. A neutral state may carry
on walinary trade with mither lonlignernt, except

CONVE'NTICLE (Lat. conventiculum, a liminutive of conemtus), originally meant a cabal among the monks of a monastery formed to secure the dection of a favoulte as abbot. The word consequently fell iuto dissepute. It was first given as row appllation of reproach to the assemblies of Wiokliffe's followers, and was afterwards applied to the mertings of the English and Scottish nowconformists. Severe statutes ware often passel for the supuressinn of these conventicles. See Tolerition Act, Test Act.

## CONYÉntion, National. See National

 Convention.CONVENTION OF ROYAL DURGHS, in Scotland. The hurgh system of Scotlaud is very ancient (see Itenai), hit it was by stat. 1487, e. 111, that the royal lourghs of Scotland were first ordered to hoh an annal neeting ly commissioners, at what is now the mimportant town of faverkeathing where the welfare of merchandise, the gude rule ant stataters fur the common protit of bumows,' shouk be disenssul, 'ank which shouk provide for remoil un"u tho skaith and injuries sustamerl within the homrows.' This comention is conjectured hy Mr harton to have taken the place of the more ancient court of the four lurelis Lblinhargh, stirling, Berwick, aut lowhugh. The powers conferred by this act, which were remewed hy later statutes, are still in force, and in vintue of them the C. of P. B. meets ammally in Elinhorgh on the second Tuesday of July. This court harl a partial jurishiction in questions as to the gromeral rembation of tralo, alones with legislative authority ener the constitutioms of the hurghs, which, previously to the passing of the Eurylt Reform Act, iucluded a right to abjust their "sets' ( $4, \mathrm{r}$ ). Its operations are now almost entindy limited to discussing measures comnected with trade, for which it may be proposed to aphy to parliautut, In this respect, it acts in the character of sunething like a general chamber of commerce (4. v.).

## CONYENTION PARLIAMENT. It is a hanch of the myal provative, that no parliament

 shall be convencel by its "wn antlumity, or ly any other anthority than that of the sowerign. Where the crown is in abeyance, this prerogative cannot of couse be exercisal, and the expaint of convention Parlianents has been resurted to, the enatments of which shall afterwards be ratified ly at parlanent summoned iu aceordance with the pro. visions of the constitution, 'The $C$. P. which restimed Charles If. to the throne net above a month befure his retum, and was afterwarls declared to be a wool paribiment, notwithstandins the defoct of the Line's writs (1:3 (ar. 1I. c. 7 and e. 14). In like anamer, at the revolution of 1685 , the hords :mel Commons, wh the summen of the Prace of 9 rampe met in Conventiom, and disposed of the crown and Kingalom, and this convention was sulserpuenty dendmen (1 Will. ant Mary, st. l, r. 1) to le really the: fwo IImeses uf farliandot, notwithstanding the want of writs abl othor defects of form. Under the Heme of ('oxvextox, there also tonk place a meetin: of tho Ristatus of Kontland, callal by the l'mace
 into a parliamont in the sth of fane therafter.

itself on such questions as cannot le constitutionally discussed in parlianent-e. $g$, a change of the reigning clynasty.

CONVE'NTIONAL, in Art, is that which is in accorlance, not with the absolute principles of beanty in fomm and colour, but with the opinions anl sentimeuts with reference to furms and colours, which chance to prevail at a particular time, in a particular country, or social class. Conventime ality in art holds the same relation to the leautiful that conventimality in morals does to the good, or in speculative opinion to the true.

CONVERGING, or CONVERGENT, is aphich, in Germetry, to straisht lines that moet or tend to meet in a point; looked at in a direction from the point, they are diveryent, or separating. C. and livercent are often nsul in refureuce to rays of light. See Catoptrics. In Algebra, the tem convergent is aphbel, in a loose way, to any intinite scries the terms of which go on diminishing; while a series is called divergent when its terms continually increase. strictly, however, a C. series is one whose terms diminish in such a way that no menber of them addeal together will be as great as a certain given number. Thus, however far we extend the series, $1+\frac{1}{4}+\frac{1}{4}+\frac{1}{2}, \& c^{2}$, the sum will never amount to 2, though always approaching nearer to it. Eut the series, $1+\frac{1}{2}+\frac{1}{3}+1+$ Sc., has no such linit, and is therefore not couvergent in this sense.

OONTERSA'NO, a town of Naples, in the provine of Bari, ahout 19 miles sonth-east of the city of that name. It is pleasantly situated on a hill in a fertile wime, oil, almoud, and cotton producing district. It has a cathedral and several convents. Pop. 9060.

CO'NYERSE AND CONVERSION are terms in Loric, signifying that one proposition is formed from another by interchanging the subject and predicate: as, 'Every A is $\mathbf{B}$;' the C. of which is, 'Every B' is A.' This example is termed a case of simple conversion; besides which, however, logicians recosuise two other kinds of conversionviz, limited conversinn, and conversion by contreposition. The former may be exemplified thus: 'Every A is B;' the limitel C. of which is, 'Some lis are As;' ant the latter thus: 'Some A is not ll;' which, converted ly contraposition, is, 'Something that is unt B is $\mathrm{A}:$ ' ' Some men are not wise; some beings that are not wise are men.' Of these logical convorses, the secom and thind are necessarily true, but not the first. When we say. 'Every $A$ is ' $D$,' the realer might at first sight conclule that 'Every B is A' also; lut if, insteal of these letters, to which he probahly attulnes no meaning, he employ terms denoting oljgects with which he is familiar, he will sur that a simple (1may luy very far from the truth. Thes, Every lenny is a 'om,' las for its simple C. "Wury con "is a J"mpy.' 'The reasun why a simple C. is mot nuensanily irue is, that in suht a propasi-
 lewieally-miversally distributel, whereas the predieate ' 1 ' is nent. if it were, the propesition would real an follows: 'Every $A$ is 'mpll') the simple C. of which, 'Kury lis is ery A, would be true.

CONVEYANOK, in Law, is He deel or writing ly whin pronerty is onveged an transferred from onc frsen to another. Thin tem, though strictly aphlicold, is mot summally applien to the act of

CONVEY'ANOER is a person who practises the art of preparing the deeds or writings used fore the comveyame or transforence of poperty foom ond persen to another. Conveyancers in Shatan ane genemally baristers, who in mast instance bloms to the Buluity but. There is also a special class of practitioners, known by the name of converameres, whor are members of the Inns of Court, though not called to the har. These must take out an ammal cortifiate. But although most alecds resjuceting real ustate are drawn by converancers, there is mir rule against their being drawin by an attorney or solicitor, if he chooses to take the risk, or inted liy any party.

CONVETANCINA is the art of preparing the dechls or instroments used for the transferme if property from owe person to another. Siuch writinus form the title or evidence of the right of the fursin possessing or claming possessim if 1 benerty: amb it is of the greatest importince that the combeyane employed to prepare them, shomble posscossin of a competent knowledge of the liw as aphicable to such deeds, and have the skill requirerl to frame them in such a form as clearly to express and attain the olvject intender. In the carlicst stage of sucticty, there was no call for the 1 rofession of a conversucer, property was held in right of occupaney, without any written title, and was also conveged from one to another without writing, the new nwner locise usually put in possession 11 presence of withesses called for the purpose, ly some symbelical form, such as the delivery of earth and stone th represent the land, a wand tor renesent woon, grass and com to represent tithes, amb ather apmoriate symbols to represcut mills, fishinge, or wher kinds of properts.

In the earlier period of the history of the Jews, the symbolical mone of changine the ownership of poperty was curions. 'Sow this was the manner in former time in lasul concerning rederning and concerning chauging, for to eontirm all things: a man plucked off his shoe, and rave it th his neighbour: and this was a testimony in Israd' (Ruth iv. 7). In later times, the fews yumar to have had a much mone atistic system of (C., making nse of all the safeghards that ane used in modern tincs-viz, writing, witnesses, sulscribing, sealins, and recondine the documents. There is a very distinet account of a Jewish converince in the later period in Jeremide xxxii, 9-lı: ' Am I bought the fieth of ITanamed, a w wrighed him the money. And I sulseribel the: evincmee, anll sealed it, and tomk witnesses. Sor I tonk the evilence of the purchase, both that which was sealed according tor the law and custum, and that which was open: and I gave the evileme of the purchase unto Baruch, in the sight of Hanamed [the scller]. and in the presence of the witnessus that suhseribed the hook of the purchase. before all the Jews that sat in the currt of the prism.'

The Tomans manle no distuction in prindiple between reat anl prsonal or bovalide and immorable property, in their eonveyancing. Each kimh of
porerty was holl free of any superior. Their deeds Were therefon simple, wht reyniring any rasurvation or deelarations of the sulurimes rights. They had puhtie registors in whin manamens ware remeded. After the invaidm of the sonthern by the nor thern

 enntaining the ferms of moturn crmo is in shbistance it lums of styles or furmo of demets, partly liomon and partly forlal. The wins nf the system of landrinhts harived from the harbrims was to ammitrate the poperty of lami, for the sake of indivitual power ; when the hioman laws and custums $t$ mile in the "prowite direction. for they treated lawd in recoml to successifon hae movalles, as the Frach now Als, Iividine it among the whow members of a fanily Alionntion hy sale re gitt was frcely prmitterl, a f"wn lome denied by the feudal rules. Indeed, fous or grate were miginally rewcable by the sup rior, and rid not become hereditary till the time of ('harlemagne.

Among the ancient Goths and iromes, the converance of lant was made in the presence of witnceses, whe extended the cloak of the lonyor, while the soller them a clocl of the land into it, as a symbol of the transference of puscussion. Among the Saxons, the delivery of a turi ley the seller to the buyer was necessary: Writtur tithos were, lonserer, introdnced at an early inexinl, aml at tirst were short and simple in form, hat inereased in length aut cumplexity as eivilisation alvamen, containing various conditions, provisions, and limitations, so that the art of the coureyaneer beane lonth a diftioult amb liblorions one. Ile hat met only to prepare the apropriate form of chavance, lat to examine the pror writings forming the tithe to the property, in orter to jumite whether they bum in proper fom ame malid. As a geveral rule a whiten title is now essential to the possession of real property in civilised communities; and if there is monten title, the property falls to the crown or stater. In the Roman empire, extenling over the water part of Europe the system of land-rifhts was allonhatthat is, the lands were heht imhlimment of aty superior. After the irruption of the methem mations into Italy, the fendal syentur was intronheal. hy which the prempetor has only a limitu t sicht und a superim. The introluctim of tho foudal systma tended to complicate written titles ta land sely much, as not only han the righte of the grantre on vassal to be exposen : ant defiuch, lat thise of the granter as userhert on : alperine. alise. In the perent century, asain, the t mhoner is townals simplicity:

Lurter the limman law, real prop rty dremmat ermally to all the heirs of a deceasel promatmo ench heir requiring a written title to his ma share: whik the senine of the fromal lasw was to concontrate fromerty in the heais of families, ami the didest son inherited the whole real estate of lis ancestur ; and alimation, hy gift or sate, was lemg denied to feudal propriet ins.

Tmprovement ia the science of faw occasions improvement in conveyancing. Ender the Foman empire, the art of (') hal attaincd to much precision in the hanls of the imperial notaries. After the fall of the empire, ( fell into the hamds of ecelesiastical motaries: by them it was commmicater to the conveyancers of the church, who perfomed the duties of the conveyancer for some centuries, till after the revival of letters, when the art again prassed to laymen.

The feudal system docs not secm to have been generally introduced into, Great Britain till after the Conquest, though traces of it are to be foumi earker. The inherent character of the fendal tenure is a grant of land made volmatarily ly a king or lealer, on the comblition of the fillity of the grantee and military service. While on the oue hand, the superior was a prutector to the vassal in time of trouble; on the other hand, the vassal was exposed to the cupidity and rapacity of the superior, whose fight tw easualties or fembal incidents enalled lim to oppress his vassals. The nature of these casmaltice or incidents will be
 holit, Emiffat, Whadshid, Marrilge. One of the most curious of these incirlents was that last mentioncl. A male heir regured the consent of his sumpior. ant large fines were exacted for the conscut. In the time of "larles I., the Earl of Warwiek exacted flo,noo-equal to a much larger sum nowfor his consent to a lady-vassal marrymg a husbond in every respect suitable.
solong as fenlal forms are retained, C, must be complex and expensive; and at present the opinion is lecemming grmeral, that the system onght to be abulished, ami the alloliad (o. v.) intro. ducel in its steal. In this view, the superion's rights would reguire to be valued and paill for. Nowahle property is usually conseyed by telivery, but there ar: exceptions; thus, if it has lueen part of the hargin that the sale is to be completel by writion, the contract must bet ruduced to writing; and by statute, ships mant be conreyed by a writing, which must be entom in the approprate reyster, su as th shew any change of "wnership.
"ONVaCT (from the Latin) means a person comvieted of any criminal charge. The tom cane loy cuntom to be aphicd to Furons sulpoet to punishment fon the more surions class of oflemers, and uf late its meaning has lecome alnost catirely restricted to the class' of criminals who used to be traungertol to the distant colmins of liritain. These eriminals
 shorter perions, and are usually spoken of as comivicts under penal discipline, while offichers senteneme to short perions of detention in the ordinary jails are called prisonets. The convicts are confined in sperial 6 estalbishments in lifferent parts of the I'vitel Kimatom. 'The earlier histary of the treatment of these criminals will be fomind under the.

 whe the: whants of pmaishment-the protetion of the momamoty, and the reformation of the

had been mate in prison-disciplime by arrangements which, withont sulbjecting criminals to absolnte silence or alsolute sulitule, seprated them from the contaminating society of cach other. It was maturally supposed that a system fomm leneticial for orlinary juisuners would suit convicts. liut it was discoverel that the discipline bencficially applied during a short perived of imprismment, could not be enlured for a long perionl without physical and mental deteruation; and that the depression and anxicty created loy their long sentences-simetimes for twenty vears, and sumctimes for life-made convicts lireak dusn under it within the period for which it coulit be quite easily enlured by ordinary prisuners. It is a fixed principle of prison-discipline, that while panishment angy he made to any cxtent disarrcealle, it is never to be pranitteal, if possible, to injure either the boty or the minn. It was found unsafe to subject male convicts to separate imprisonment for more than nine months; females, owing to smone constitutional difference, are fund to bear it without detriment for a few montlis longer, At the end of nine months, then, or a year, as the case may be, the ( $\because$ is gralaally, so far as is consistent with safe custody, brought back into the habits of the freer popalation. It is usnal to call the early stage of their diseipline the penal, and the hater the reformatory. hi the latter, they are ass ciated muler precimtions and careful inspection, and are occupied in trades in which they may make their bread when free linhlic works, such as the breakwater, cuarries, imm fortress at Portland, and the works at Chatham ant Portsmonth, afforl a valuable outlet for (. laimur. In such establishments may he seen a thonsimi men or more, with hammers, mattocks, axes, and all descriptions of formilable tools, working under the eye of their varlers as cutictly am systematically is ondinary labourers. There are estiblishments where, as far as possible, the same system is alministeral to females-as at lirixtom and lereth. The great hoded ly which the couriets are kept in orier, is a series of rewards for ${ }^{\circ}$ gowl endact, enhminating in the wratest reward if all-a remission of part of the sentence. The results of the C: system have yet to be seen; lut in the mantime it is undoulted that since this, the most fommilable, part of the criminal b"julation has heen kept at home, crime has been decreasing.

The pusent ('. estallishments in the United King. dom are:-1n Fingland, lortland, Portsmonth, and Chatham for males, in each of which there are puldic works; Ientonville, Parkharst, and the havalid l'risons at Lowes and Working, also for males; Hillomk, for mates and females; and lrixton and Fulhan, for females. In scotlam, the $\therefore$ depratment of the seneral prison at Perth is at present conly newpied ly fomales. In Ireland, spike Ishom (with Fonts Camben and Carlyle), 1hilipstom, Smithifeleh, and Lask, for males; and Nountjo 3 , for mah's and fommes, Tho number of convicts in the sereval chpartments of the cmpire in 1860 Were-Enghand, 6ivit mathes and llss females; feotland, nos frmales; and in 1rdame, 1157 mades, and 111 fomals.s. There were at the same time 1800 mal. convids emphowd at public work in Bermadia and (ibmaltar, and itwnat ind on tha ohl transporting system in Suath Austarlia.

In ancient times. the weeasion of a banquat alpuans chictly to have amisen in a sacritice to the enme, when a part of the vietion was lernglat the the dwelling of the samifices, and was combent for the
 celnhated in this manme. "The l'msians." says Herodatus, ' were ancustomel to hommir, above all others, that day wh which they were imon, when the rich amuliz then wonld sacritice an ax, a horse, of a cand, which thy roasted whole in ovens, while the promer class wive why the smaller animals, as sheep. Yot th. Persians were not great caters of rucat. hat consumad much sweet from, aun dill wit nac salt.' The appendases to the higher creter of hanpucts were must macrificent, so that in puint ui quantity and display they were fery expensive. Herodutios says on this herd. 'that the Gredss who invited Xirxes to supher all come th the extremity of ruin; and that, wherever
he took two meals, dining as well as suphing, that city was utterly rumed.,

The Eryptians, it is sail, were great bread-eaters. Though they possessel wheaten-flom of the finest sorts, they du not appear to have used it for their common brean, which was manle of splelt, or of the centre of the lotus dried and ponmed. Fish they salted and dried in the sun; quails, dnoks, and small birls they salted and ate maw. We read of their roasting and boiling the thesh of the ox. Large flocks of geese amt of fowls were kept by them for the nse of the talle, bence their phan for the artificial hatching of cugs. "Fish was used hy all classes except the priests, hat the staple fonl of the people consisted of regutalles, of which they hay a large supply. Herolotus mentions their making leec from barley, which they ealled lythus. We mayy still see the form in which their forme cane to table; ducks, luases male mund, ant fome biscuits and cakes, which have been taken from Exgptian tombs, are to be formel in the British Alnseum. Aprollonius, who wrote a treatise on the feasts of the Egyptians, says that they ate in a sitting fusture, using the very simplest and most wholesone food.

There appears to have been considevable difference as to the mamer in which rood eating was appreciated in Tifferent parts of Creece. The Athenian meals are ridieded ly the comelians for their parsimony. After the llomeric age of simplicity, in which roast and boiled meat seems to have suthiced the kindy talle, a diversity of preparation was oltained in cwoking and a certain epicureanism displayed in the quality, seasoning, and methenl of dressing fool. The names of many anthons of C . lonoks are preservel in the writinus of Athenevis; that of Archestratus, who is callent the guide of Epieuras in his pleasures, ant stylerl the inventor of made dishes, heing the mont renowned.

Fish was a principal article of food with all elasses of fireeks; but with the wealthier, much skill and delicacy were used in cooking it, and choice and expensive sorts were sought after. Archestratus writes of a bailed torpedo done in oil and wines and fraprant herlis, and some thin grated choese; Fish. stufted with forcement and fried, buided in pickle, bakel in tig-leaves soakel in oil, cooked in bot ashos, \&e, are annong the recipes we find reconled. Large quantities of salt. fish were lirought from the shores of the Euxine and the ILellespont; and this, with meal, cheese, and onions, was the chief fool of the armies and navies when on service. The (ireeks boilel amb roasted the thesh of sheelo, finss, lamis, and geats. They had foultry, small hires, anl grme, aul sansages made ie blond, partaking of the charizeter of haek-puminus. Thic freal mide at ithens was the most celelmated: it was sometimes houselwh, bat chicdy bomelat. in the market, and was made in great raricty, at pan-laves, rolls, swect haves, \&e. The mead - atom ly the purmer classes was made of harley, amd
 d.4. Atwnan chese-cakes were also fimous; anl they hal homey and sesame-eakes, which, With frosh and hried fruits, as time aluonds, whes, ani muts. serm to have becon birtaken of after dinmer They comsumed regetable ford also in abmutimes, ain had cabliage, minns, lettuce, and :

'To roast some becf, to carve a joint with neatness, To boil up sauces, and to blow the fire,
1s anylouly's task; he who does this
Is but a seasoner and broth-maker;
A cook is quite another thing. His mind
Mnst conprehend all facts and circmustances:
Where is the place, and what the time of supper;
Who are the grests, and who the entertainer;
What fish he ought to buy, and where to luy it.'
Qrotcd by Athencus from Dionysius, a comic poet.
In the carly days of Fome, a gruel made of barley, anil called puts, was the principal food of the people, and with green and other vegetables was, till later times, the usual fare of the inferior classes-meat being used but sparingly. By degrees, hewever, a taste for better cating crept in and after the Asiatic conquests luxury was imported. Luevlhs introduced hanits of enpeareanism after his return from Asia: the goumaul Apicins earned for himself a deathless name. The wealthy komans eared for the clegant surving of their tallo, as well as for the quality of viands placel lefore them. With them, as with the Greeks, fish was a neeessary as well as a luxury: they trok mach trouble to procure their oysters, and gave large sums for other fish. We read of a mullet of six pounds sold for 8000 sesterces ( $570,16 \mathrm{~s} .8(\mathrm{l})$, and of the rhombus or turbut from liavema being held in high estina. tim. They seem to have peen as clever as the French in preparing sumpizes, and in earrying out disquises in their dishes. The pistor, who made the breat and pastry, and the structor, who composed artilicial figures of fruit or flesh, and who also arranged the dishes, sem to lave shared the duties of the cook. We read of dainties, as ring-doves and firldfares, hares, capons, ducks, peacucks, pheasants, and the livers of geese: also if such a formidable juerte de rexsistunce as a 'huse har, surronnleal with sneking-1igs made in sweet paste, whel were distriluted among the guests.' The Fiomans prepared and cooked their food with nil to a great extent. Their meals probably consisted of two courses and a dessert, the first course being of materials intended to sharpen the alpetite, and the second the "brunt of war,' that is, a joint roasted or bakel. The riscovery or cultivation of vegetables, perhaps, gave rise to some proper names, as Lentulus, Fabius, \&e. It is a Roman saying, that the number of persons at ir repast should mit lie less than that of the Graces, nor more than that of the Muses. The Greeks and limmans used honey for the purposes for which we use sugar. The sugar-cane phobably was eultivated in China, and its mannfacture muderstool there ; lut the Greeks took it for a kind ef concrete honey, and used it only for medicimal purposes.

Of anciont British C. nothing is known ; it was prohaldy of an extremely male description. Hares, ponltry, tud fish are sail to have loch forbidden as fond. We do not fimanch montion of the art of C . in the Naxom chromieles. The Dabes and Gemmans appar to have luen great drinkers, and to have prith little attention to the perpration of their "atables. 'l'he Nomans were more curious in these matters: some othees amone them were bed in right of the kitchen. $l_{11}$ early Engtish (ameh use was male of the montar. oflaml lat were used instran of hatur. surmal linglish (c. hooks hear an early date, as The Porme of "url, hy Mr legre, 1:3世) ; mul whers date as follows: Nir J. Elliont's lwok, 1539; Ahmanm Veale's, 155:; The Widhlove's

Thae (', of Jramee was probully of an imperfect amb pule kind, till the intronluetion of lialian tastes by the prineesses of the llouse of Aledici. The
ancient use of oil was montilime by the riswory mate by the Fronch, of dressing heat in its own grayy. ho ow own day, there is an draying that the French cork is a true artist. Wir may, if we phease, impute the tromble he takes with the ofressing of his meat to the inferineity of the matmal, lout this can be said of meat mily; thu preparathon of vegetables aml froits is attemond tor with equal care, although, probally, the Fradh have some of these things in geater perfectime than anmsemes. The great dillerence betwon Premeh and binglish C. consists in the fact, that they cook their insat much longer than we do. They comsiber that this renders it more digestible. They are theroly emathed to multiply dishes by altering or ammin lating the orginal taste of the meat, and making it a veliche for forcign ilawors. The variety, daintintess, and grace of fomm which dishes thas acquire, is advantageonsly made use of by us, when we amnit them at our repasts to mingle with om heavier and ralically Euglish joints. But, for ourselves, we desiderate the integrity of the form anif flavour of our meats, considering that to ho wor $r$. cooking which the Frencl think only sufficient. In the point of ceonomy, the French have a decided supriority over us. The French cork throws nothing away. Instead of golues to the loatcher for meat for stock, as our Enidish eook does, he uses the trimmings for stnck and plaze, and the skim. mings of his luiled meats for purposes to which we aply hutter or lasd; and like a true worknam, he prowluces great results from small weans. 'This requires an edueation which few mistresses demand and few cooks obtain, hat which, when achered, justilies the expression of Voltaine:

## Qu'un cuisinier est un mortel divin !

The estimation in which the services of a conls are held, may be known by the large salary attiched to the oftice in great families, hotels, and chub-houses. A visit to the kitchens of onte of these estalilishment: will teach us what a highy impnrtant past is that of
 only the necessary knowlenge how thines are to be done, but the power to arrange and direct the wom of the mumerous assistants, as $t_{1}$ the exact part they must fultil at each moment of their long and bosy day. These phaes, inleed, are excelhont schoms for cooks. Where they can minere that severe traming, withont which a thorongh pratioal hnowledre if the lusiness eamot be attainet. It is in leet to he regretterl-beeause a source of so moch disajpintment, discomfort, and waste -that a kowlentere of fhain C., at least, is not more desirul by mistresses for themselves. That aeruirement, wil houschah management generally, are important chowh to he wade part of the erlucation of all chasses. The poorer would thereby be enableal buth to lay rut their money profitably, and to prepare their foen so that it might satisfy and nourish them; and the heats of establishments in the upher classes would be more in a position to direct, ajrreciate, or, if necessary, enndemn the ferformance of the cook, A enltivatid and elegant taste is as much shewo in the arramement of viands as in the furnshing and decoration of the ehoicest bourloir.

The art of C., as a branch of fenmele equeation, has lately engragel consideralife attention in Enslant: and there are now in Lonlow, Edinlourgh, ant otho: phenes, establishnents where yound lalles receive this kind of instruction; more particularly in the art of making pastry and emfectionary. Efforts are also mate to thach $?$, to the hambler chasses of girls, lut moch in this respeet remains to be done. For any shortemangs in cooking, howerer, the taxte of the English is in some measme accountable. The

 waste, and is ohtmotive a' impormonent. 'Thom

COOK'S STRAIT, discosered by Captain Cook om his first woyage, semates the north and minhle islands of the New Zealand group. The prodf of its existence disspated the pomar helief that New Zealand, as previonsly known, was merely a salient point of a great southern continent.

COOKSTOWN, a tom in the north-east of the comety of Tyrone. Irelanit, on the left bank of the Ballinimery, 2.3 miles east-mortl-east of Omagh. It consists of one very long and hroad street, with a row of trees on each side. It lass a linen trade. Pop. 3259.

COOLERS or CONTRITVANOES FOR COOLING. are resated to by the brewer, and by the distiller of alcohol am other liguils. Se Beer and Distimlation. They are also used in warm weather for the coroling of water (9. v.).

COOLIES, or COULIES, mighally the name of one of the aboripmal or hill tritus of Itinlastan. From the circumstance that many of this tribe are employed as labourers and porters in Bombay and ther places, the name is applied by Eurpeans in Fimmstan to porters in genemal anil it is now used to denote emgrant labouters from Imbia and Chima to tropical and uther conntries. The importation of this nseful class of labourers to the Mauritius, West Indies, and Fritish settlements on the mainlaml of Simith America, has grome up as a result of neqro -mancipation. In all those combries just alluderl t", where wid land cond he taken possession of ly squatters, and from which a livelihood cond be casily obtaned, there has been, as is gencrally acknowledred, an indisposition on the part of eman ipatem slaves to beenme romar hired lanurers. Hemece as is alleged, the neewsity
 baindocs presents, perhins, the most remankable example of an alsence of such necessity, becanse being universally afmopiatell amb caltivatel, it rally leaves mo space for squattinge and the alternative is practically lalener or starration. The nocessity for importing es seems, in shot, to depont on the amone of land that may be montlumisully taken jessession of; and nowhere, ancurlins $t$ a all arcomate is this mene conspichons than in the mow ill-combtionet ishand of Jamaical.

general olservations on the introdnction of C . to certain british West India settlements. Where it is to be notel, that the immigration of $C$. is now placed under so strict a system of magisterial control as scarcely to admit of abuse. Is a general rule, the phan followerl is to cause all the lirings for a term of years to be transacteri lufore a proper tribmal at the fort at which the 6. arrive. The terms enteral on mast lie faithfully fullilled by the employer; and the laborer, at the end of his service, minst, if he wish it, lie sent home free of expense. In point of fact, large numbers retion with considerable sums, the fruit of their industry:

A retarn to the Monse of Lords, l-th July 1559, gives the following particulars conceming the immigration of C.: 'The sum expended for immigration on account of the colony of British Guima, from Jamary 1841 to the 30th Jume 185S. was $£ 446,150$. Of this sum, $2691,7 \mathrm{~T}$ was expended out of the colonial fumis, and $2154,37 \%$ by the planters. No mayment has been male liy the british govermment on account of this immigration. The planters commencal to pry some proprtion in 1851, and contiment to pay every year. The total amount of esth. 1.5 y was spent as follows: £9070 for the importation of immigranis from the West Indies, $\pm 46,550$ for the impertation of Africans, $£ 95,413$ for the importation of Portuguese and Cape de Verde Islanders, fontalu for the importation of coulies, $E l+195$ for the importation of Chinese, £103,650 interest on loans, and $£ 19,650$ general expenses. The mumber of coulies imported from Calcutta was 18,532, and from Madras, S248; total, 26.779. The arerage munler of deaths amongst every 100 immigrants from India, during the period lretween lst Jamary 1835 and 30th June 185S, was $5^{2}=3570$ lndian imnigants were returned to India from 1st: to 1855 . The mortality in the culony was 529 . The deatha amongst cvery 100 immigrants were 372 in $1855,3.11$ in 1856, 4.85 in 1857, and 181 in the halfyear ender 30th June 18.5s. Of Chinese immisrants there were lronght 647. The number of deaths was 269 . The number of deaths amonget every 100 immigrants was 1339
 and $0 \% 1$ in the halfyear ended 30th June 1858. In Jamaica there were brought, from 1545 to 1551 , 4ril conlies from India, and 42 from China. The amount paid on account of such immigration was £s:, 0 . From Calenta to Trimidad there were cmbarked 11,631 imminants from 1843 to 1858; of this mumber there dicti on the passage 740 , landed
 'Trinilal there were embarkel 209 immigrants; of these there diad un the 1 assane 22, and landed 2073. From (lanat to Thilal there were embarked 1012; dicel on the masiage of landed 988 , and sent to hospital 2.2 Prom Trinidid to India there were cmbirkind 1890 and the amment of sivings deposited

COPERNICAN SYSTEM, THE, is that which represents the sun to be at rest in the eentre, and the earth and planets tor move round it in ellipses; in other words, it is that which we now know, on mumustionable evidenee, to be the true system of the worl. It got its name from copernicus, but, in point of fact, it may be described as being a growth to which he was only one of many contrihnturs. The merit of having first formed the veneral notion of the system seems to be due to Pytharons ; Copernicus bas the eredit of haring, after the lapse of conturies, again drawn the attention of philosnphers $t 0$ it, and of having greatly increased the probability uf its truth ly his ealculations and argmments; fur the rest, the glory of having matured its illa belongs to Kepler, Galileo, and others, and to wir wwn Newton, who, throngh the discovery of the law of gravitation, demonstrated its trith eftictualdy. Nany who hawe been used to reverence the name of Copernians in conmection with this system, would be surprised to finci, an pernsing his work le Recolutionitus trbizm, how mnels of error, umsond reasoning, and hally conjecture eomlined to secure for him in all times the association of the system with his name.

De Rerolutionibus Onbium, dedicated to Pope Paal III, consists of six books, in whels Coprerniens unlertook to demunstrate his whole system. The character of the reasoning which then passed for demonstration, must be borne in min! in judging of the anthor's procedure in establishing his varmus positions. It was then thomht a sufficient demonstration of a phenomenon to make a supposition, on which its occmrnce wonld be intelligible, without attempting tu brins the supposition itself, by an induetion of facts, within the truth of nature; many abstract promsitions, too, which would now appear to be simply silly, were at that time universally almitted to be of creat weirht in scientifie arcmments.
llinstrations of both of these peeuliarities may be Gleaned from the first of the six books of De liteofuthonibus. It contains the following propositions : 1. That the universe is sharical. This is established lyy such armuments, as that the sphere is the most prrfect tiwure, \&e. 2 . That the earth is spherical, which lows from the same kind of considerations. ; That the earth and sea make one ghobe, 4. That the motions of all the heavenly bothes must fre uniform and cirenlar, or compounded of unferm and cireular motions. Iere, asain, we meet witls singular reasons. A simple borly must move cirenlarly, and nothing but circalar motion could give periodicity to phenomenis. 5. 'That, supposing the distance of the stars to be immense, there is no reason why the warth shomld not have a mothom rumm its axis as well as a motion in its orbit. G. That the spbere of the stars is immonstly distant. The proof is fimeiful, and shews he bat nor mition of a maiverse of stirs prombing space. 7 and 8 . The ancionts were wrong in flawing the warth at the centre of the miverse. 'The argunents nombe this had are as imarinary as thase which they were desigmed to refute. The falling of it buly to tha earth ho dedmees from the assmanpina, that it is only fiven to wholes to move cimoulaly, while it is of the moture of jarts, separated fron their wholes, tu move in right lines. That there must las a erotrom mompli, an entity noknown to mond win serinco, is armitted, the question being as to its pusilion. U. It is prasible fur the earth to haver several motions. 10. He establishes the order of the plinnets, mul drows a limgan of the system muth as it is now representel. It may be olserved
that, following the ohe systems, sulh the th. I'tol maic,
 Fimminmat.) It is 'lear, illsu, that he had me illa of the motions of the phanets other than that they were such as wond lue cithod lay thar lemen fixal in immense crystal spheres reviline rombl the sum.

The most brilliant and valualde part of the /h Revolutionibus is that in whin lus whainal, for tho first thene, the yariations of the sensomes, the paras. sion of the equinoxter, and tho etations and retmeradations of the banders, theneral, his "xphamations are right, amblymen as to the whem natere of the cansps of the fthenomonas. But Cupamions hand neither mathematheal mor mowhanal lanwlente suthejut to enable him to explain more than the ancan motions of the solar system. Cowament for irregnatitios, he was abliged th introunce a system of epreycles entirely rescmbling that of lithmy. Su I'rolemar srama. This arose from the false motion of his times, that all mutions must be compondea of circular ones, with the aptication of which idea, and with the invention of conveniont epicyoles, the greater part of the be le molutimithes is ocenpich. It may further be adhen, to rectify the valgar notion regardine the relation of cincmicus to the system of the hearens, that he had no answer to offer to the mechanical whactions to his system. Must of them, incleed, were suchas conld nut [ussibly le met in the then state of mechamical hmowledese. One of the commonest was that against the axial motion of the earth, that it was inconsistent with the fact of bodies falling to the points of thet earth directly beneath the points from which they are drimped; for this lee had mon answer, nor could he have, the laws of motion leing not yet diswowed. Such loing the state of the case, the manem will consider whether, when Copernicus wrute that he hell the ductrine of the earth's motion as a mere hypothesis, and not as alisulutely in fact troe, it is more likely that he made a comeessinn to the religions prejudiees of his times, or to difficulties surroming his hypothesis, which he could well alyreciate though not overcomes.

COPERNTCDA, Gee Chisamma Fhm,
COPEIRN1CUS, Nicomet, an mment astronomer, was burn at Thum, in ITusim, 1!th Fehmary 1473 . Ife was instructed in the Latin and freek languases at home; afterwards he was sent to the miversity of Cracow, where he stadien philusondy and mathematics, aml also towk the degree of ductor of medicine. lis matmal bent, howerer, was towarls mathomaties, the stuly of which he pursued with passion through all its banches.

Havine become enamurend of the staly of astronomy, he projected a jonmey to liome in lis anthusiastic admiration of Tegiommatams, who restided there, and was then the most illuntrins of the astronomers. On his arrival he was kinily veceived loy Regiomontanns, whom he som rivalled in fane. Here his reputation, and the fawsur of his distinguished friend, led to his leing chasen professom of mathomatics, which he tanght for seveml yours most sucecssfully. After several yars he left Jome and retmoed to his native comitry, where, having entered into holy orters we suppuse, he oltamed through his unche, the lishom of Warmia, a canmary at Franenhorg, in the chjognont of which he passed the rest of his life. His working-diny, it is said, he divided into three parts-one of which he devested to the dutics of his oflice, another to giving molical advice gratuitusly to the poor, anil the thiad to stomy.

Sum after his return to Prussia, he beran, in his 3oth year ( 1.015 , $t_{0}$ aply his fumb of abservations and inathematical knowlelge to correctims the

COPPHOLD, a species of estatio or rihht of property in land, jeculiar to the law of Endand, although resembling in many particulars the fenrights of Scothand. C. is exiressel technically as - temare ly cong of conrt-rill, at the will of the lorel. accurling to the custom of the manor.' This means, that it is tenure of land, lowing part of a manor. the title heins evidenced by the courtrolls of the manor, and the right of the owner being in confurmity with the immenorial customs of the manor. The allition, 'at the will of the lorl,' serses only as a memorial of the derivation of this splecies of estate from the estates granted in olla times to the lmudsmen, or I'illins (4. ©). which were of course resumalle at the pleasure of the lorl. But the will of the lund is now ahmolutely controlled hy the castom of the manor, which forms the law of the temure : and as this custom must le immemn. rial, i. e.. extending to the reign of Iiehard II., no (. can now he createl.

The custnu of each manor may vary in important particulars. In some, the C. lants are held for life only"; in snme, they descend acconding to particular rules of their own; in most, however, they descend according to the ordinary rules of succession. But the custim, whatever it may be, cannot be altered by the holler of the $C$ : he cannot, for iastance, entail his laud nnless the custom warrants him.
An important puint, also dependent entirely upon special custom, is the amomt of the money-pryments lhe ly the enpholler to the lond of the manor. Thuse are divided into quit-rents, an annual payment of the mature of the Seotish feu-duty; fines, payments ou particular occasions, such as alienation or sucerssion: and leriots, or the best piece of persmal property, to which, on the death of the complulder, the lond becomes entitled. As to fines, it may be olservec, that the custom may either fix the ammont. or it may leave them to be at the pleasure of the loml; but as the courts of law require that all customs, eren when indefinite, shall The reasmable, they hare fixed the extreme amount that can be exactel at two years' rent of the land.
The practical distinction of most importance, hoveser, lutween frechohl and $C^{\prime}$. hand, is the mode in which it must le conveyed. An ordinary convesance is inetlectmal in regarl to C ., aml indeed woulil operate, like wther attempts to break throngh the custom which forms the title, as a forfoiture. The conrec alopted is almost inentical with the sonttish rasmution. The owacr comes to the stewand of the manor, and ly a symblical delivery, acconding as the eustom may 1 reseribe, sumpeners the laml the thed of the manor. in onder that it masy laterantul arain tur such furson, and on such torins as are lesired, and as the custom authorises. The stwant, by a rapetition of the symbolical delivery, transers the 6 . to the 1 .rson in question, in tomis of the surmmir: and he then pays the chstumary finm, amd takes the oath of fealty:
 tamee. In tha :asis of th hair succowing, there is man sumber, hat there is almittance conly umen paymut of the astmany fine and it is enforece by a chatmary pmally. 1 momeme is abecten by a surembr, im un condition that the money is repaid, and tha" almittan" takns place anly in erent of

COPYIN(: a term apmoni in llostomaphy io the repoulution of pantines, ongravines, mamseripts, matp, 顺e The kimls of cuncrat and lons most suitalue for the purpse, will be frome described mater their respective heals; the quality ant comlition of chemicals mocessary are hascil upna the facts, that long exposure is almost invarially refnired, and that, in the majonity of cases, it is desired to copy black marks umm at white ammul, as in a shect of musie, for eximple. Where it is obrious that nothing that can lue called a wrildle tint is requiren, lant simply pure hiack and white, recourse should he had to argmie matter in the lath; a little acetate of sola, and an extra amome of acetic acil, may be also :unded, am an obld eollodion contaning free iodine employed.

It is important that the work or surface for for copned shonld he placed in in strone linht, wum exactly at right migles th the axis of the leus, which should be furnishal with a smoll stopl. These three conditions, it will he suen, are surh as are calculated $t$ o insure slensity in the liacks of the nogative, fredom from distortion, amb sharpness at the elges of the piotome. The copyines of oil-paintings seems to the mantere, at first sight, to present almost insuperable difficulties, on account of the reflected liglat from the varnish passing through the lens, and producine black patches on the negative. This may, haweret: be completely aroided by the omphyinent of a lens of long focus, which armits of the omprine pencils of li hat passing off withut onteriner the camera.

This will beome more intelligide bey reforence to the following liagram, in which oll is smposed th be an oil-painting, L the lens, and IM the imare. leet I lee a ray of light, incilent at li: rullection at the ranished surface will curnse it tor pass through the lens, and come tor afocus on the sensitive surface at $r$. catsing an increased action at that lumet, resulting in a black rateh. If, howewer, is lons of lonser focus le employed, and the cancra be movel further from the picture (as it monst lie to cobtain the same sized imarge), as shewa ley the dutterd
line, it will be seen that no rellectal rays ean fall upou the sensitive plate, but that they will all pass beyoud the field of view.

Attention to the laws of the reflection of light, will surgest to the realer the importane als, of avodins a pright light immediatily lenimet the comera, as the rays of light would then fall un the wrished surtwe, noarly at right anghes, and be wiffected into the camera. The oil-panting, there fore, thergh placed in strong sumshme, for the lumpe of siving rigour to the more ohscure parts, should be so arranged as to allow the light to, fall on it at an angle of about $35^{\circ}$ or $40^{\circ}$.

CoPrificilt, an auther's exehusive right of property in any work which le mrites, and which, unler cortain limitations, is transturable to his heirs and assigns. stult is the chief of general meanine of the tom, which now, bowever, cmbaces several varieties of rishat; and these. trom the importanco of the suljuet, we prope to consider seprately.

Buaks.-The illea of a right of property in literary compresition is of molern orim. Nothing is heara of (? 1 mevions to the invention of printings, nor for a lone time afterwarls. In ancient anil medieval times, bows appent to late pent trans. crinal frofly by other parties than their authors, amm as freely disposed of, oftom at great prices. Arter the intronhetion of printing, the liberty to Iuldish looks hecame tha sulject of liconces an 1 patents: and those privileres may low enil to haw constituted as special momopuly of the mature of consright. In the alsence of and lieence one protection of this limi, authers mald only resont to the common liw to cimbinate their real on fancied rights. Put the common law of Euglanl was silent on the suliject. There were sornons diferences of
 exclusive right in liturary composition, viewrine it az
 assigned. Inow, it was askel, conll inves. ur the way of writiur a narsitive, he mande property: summsing. how ver, that a certain structure of ideas aml writton worls omll he iurested with the quality of 1 mopents, it was masomate to concelude that the property slamlal be ahombte anl perpetizal to the mabur, lis heirs amb successors. such Jeing the ease, it would he poper for the heirs of Shakieare, Miltu, Iunyan, an': other literary
 works of there requectio ancestors; leaving them, of courso the right either to maintain a momopoly, un in suplress the wopks altonthers. Snch were the quastions that puzzler the Enchish jurints of the
 to have lece male. Nor lecising wais come to, as to Whether literary emmension was ferepury in the urdinary semee if the wow. Let, lowking it it as a thines on which thomits and labsur hard heen expemberl, aut prof saill: for the encouragemunt of learnine,' it was demmi wortly of leal potection for at luast a priml limital lig consinerations of puldic julley. An act of pariment was aecondinely

and write uscful looks, mily it,' \&c. The chief provisions of the act were, (i.) Tuat authors who, nifter April 10, 1710, had not soll their C . of works in print, were to lave the sole right of printing them fur 21 years: (2.) Authors of loouls not pinted and pullishet, and their assignee or assigns, to hare the sole liberty of priatios and reprintmes such book and books for the term of 14 years, to commence from the day of the first puldishing the same: (3.) After the exjiration of the said term of 11 years, the sole richt of pinting or disposing of copies to return to the anthors, if they were then living. for annther term of 14 years.

Culur this act, anthors rlisposed of the C. of their works for the specified perion, at the enel of which, ns rears at monst, the C. lipsed. Although the worls might then have been consirered public ponerty, a custom aruse among publishers of not interfering bith each other's lapsed copyrights; and in a sense each assumed a kind of perpetial monopoly of the works which he lan purchased for a terminahe period. Sis stnoil matters, when Alexander Donallson, an Elinhurgh lookseller, of whom some natice has been taken in the article Book-Trade, Troke through the courentional regulations, by issuing cheap reprants of works out of copyright. There ensued a litigation, of which it is necessary to present some details. At divers times in 1729, James Thumson sold the C. of Lis Seasons and other pems to Andrew Millar, a London bookseller, for sums amounting to $£ 242$, 10s. Thomson died in 174. Accorlinis to the Act $S$ Anne, c. 19, the ntmost length ti, which the C . of these works could be extinder was os years, which teminated in 17.57 . Millar died in 176s, and his exccutors, in 1769 , sold by anction the C . of the works in question for t.5. The purchasers were 'Beckett and others.' This sale was, in reality, an imposition: for, as jnst mentioned, the C. had expired in 1757. Aware of this fact, Jonallson, in 1768, issuel a cheap edition of Thomsun's scosons. He was now challenged for an invasinn of C. : and in 17\%1, Beckett and others applied for, anm procurel, an injunction from the Court of Chancery to restrain him from further $p^{\text {rinting }}$ and selling the work, and to make him answerable for the punts he had already realised. The only explanation of this extraordinary proceedines is, that tho applicants for the injunction imagined that at common law they hal accuured a property in Thomson's Seasons in all time conning. The question at issue was nothing less than the creation of perpetual monowelies in literature-not for the benelit of antloms aun than families, but for certain pullishers and their assigns. The notion of a commondaw right hat prevaled in granting the inpunction, and the walinlify of sum a notion was now for ever to lo detemminni. Bonathon appaled to the: llomse of lomis. The chief points messel for consideration were, whether at common law an authow had the solu righo of pinting his works ant nhother, pusiessiner it right of that kind, it was talu"n away the thentor S Ame. c. 19. The bame differel in thar "puion, hat the decision finally conle for was that any richt at common law wan Map:whent and takno away ly the statute: and tho Where of the Cond oif Chanery was accordingly reveral. S'e limwn's Popliomentury Cuses, vol iis, I. lat. by this famel deeisiom, it was settled that Hams of ": rest altomether on the statute and its
 pont amism worls wh whin the stalutury term of C. has "xpirent: on the smolde srumb, that all such

"The (', haw diel mot extemel to lramal till after the minal with that conatrys when (1:50) the whole I niterl Kinathan was inchuled by the det 41 Geo.
 ss years.
The impetus given to literature during the carly part of the present century, ly the pophar amb voluminous writings of Senti. Byron, Moner, Wumb. worth, and others, along with the growing taste for reading among the midde and less aflnent classes, greatly increased the market value of C . in esers species of literary production. As a matural consequenee, that kind of disinterestedness so strikindy demonstrated in Robert liurns, who could hardly lee prevailed on to aceeft a fuw pounds complimentarily in requital for humdreds of the most beautiful lyries, was no longer seen; on the contrary, it became a recomised principle that an author was entitled to regard the monnet of his brain as purely a mereantile commodity. At length, under an impulse communicated ly the assigns of some valuable copyrichts about to expire, and on the assumption of benefiting the fanilies of cortain popular writers, the lecristature was inducel to cxtend the term of copyright.
By the Aet 5 and 6 "Vict. c. 4.5, called Talfourl's of Lord Mahon's act, lst July 1842, the teria of C. was extemded as follows: "And le it enactert that the copyright in every book which shall aftor the passing of this act be puldished in the lifetime of its author shall enelure for the natmen life of such author, and for the further term of seven years, commeneing at the time of his death, and shall be the property of such author and his assigns: provided always, that if the said term of seven years shall expire hefore the emt of $4:$ years from the first pultication of anch book, the copyright shall in that case endure for such jeriod of 42 years; and that the coprrigt in every book which shall he pulished after the death of its author shall endure for the term of 4 gears from the first pmblication thereof, and shall be the proproty of the proprictor of the author's manuscrint trom which such books shall be first published, and his assigns." In the case of subsisting eaprights, the term was to be extended to 42 years, except when they belonged to an assimne for other consideration than natural love and affection ; in which case they were to cease at the expiration of the as years, unless their eatension were agreed to letween the promictor and author. In this act, there is a remarkable clanse giving power to the Indicial Committoe of the Priyy Comen to license the publication of looks of importance, which the jropictor refises to repulsish after the death of the author. Formerly, there was an obligation on mulishers to deliver 11 copies of new works to certain universities and other puldic institutions: the ondigation was now modifical to 5 copries. The importation of English C. Works 1 rinted in foreign comtries is prohibited. C. is reclared to he personal 7 woperty, and may he berpueathen as such; in ease of intestacy, it is to be subject to the same law of aistrilntion as other fersonal or mosabla estate. The old ohligation to recister the ( 0 . of new works at Stationers' Hall was also moditied : registration is no longer obligatory, but the practice of rusistering is still requisite for the sake of evilence in inaking gund clams of copyriglat. Froms of registration and assignment are given by the act,
but the use of them is not intisponsalle. The law of 1 '. makns ma distinction lictwern Sritish subjects and alions. A fromger may own the C. rif a work paintol first in Garat liritain; bat neither he nur any other imron could mantain a clam of 6 in a work which had burn pu-vionsly issued in a foreign conntry with which ther is no international treaty of copyright. Atwompts are sonctimes made to evale this, by issume wlitions of a work simultannonsly in the luited States and binglamon the same day so as to secme loth britivathel American opyrights.

The cromary process of etapriat the intue of manthrised reprints of ('. works, whin theceive the name of patat inlitions, consists, in the linst place, in procuring an injunction fron the Come of 'hancery (if in Sontlani, in int raict from the Conrt of Sussion), and of atterwards rasimg an action of clamages at common law. On whl that comermat prosecution, as well as for many details resuectinf C. in its ditherent waicties, we refer to (hodsion and Lurke's Truetise on the Lerer of Congright.

Such is the histury and general nature of the law of ( respecting lioks. The last-mentionat act, mare explicit than previous statutes, remains the great clarter on the subject. Uniortmately, it still leaves some defects which it would reguire a fresh law to remedy. The extension of C . for the asswom bonefit of anthors and their families, which is the lewling feature of the act, must he ponomeer? gencrally worthless. In the oreat majority of eases, anthors assing the C . of their manuscripts for a enusideration to publishers, who, looking fur remueration within a reasonable lengtl of time, canot, and as a rule do not, give a ligher price fur a 42 than for a $\because 9$ years copyright. The teudency of Talfourl's act is still more than ever to lock up copyrights in the hands of the original assigns, where they are apt to become torpid and useless. A remedy for this evil has lately been found in a practice followed by certain acute and enterprising jublishers of eleap reprints. Buying up the nnexpired copyrights of bows which have gone some what ont of notice, they issue them in a furm suitable to the natime of their hasiness; and snch reammated prolnctions constitute no small share of the cheap volumes that invite public attention-the author and his heirs being not in the slightest degree bunefited by the process of literary resurrection.

Ertructs, Abridquents, de-C. in a look entitles the prometor to 1 revent extracts heing made from it; lout in practice, short extracts for the purpose of criticism, as in reviows, or for historical illustration, are tolerated. Thantherisen alriduments of $C$. works are Acemit piracies, ami then sale can be stopped. In such cascs, however, the abridgment must shew a clear aloption of the langlage or collocation of words of the arimimal. It is now determinel that nu C can be maintaineal in mere sulject, infuruation, or ideas. A writer may hare phat himself to creat tromble to procure infurmation on a gurticular suljecet; but the law does not recornisc how infomatims is phement. If a second writur use the information of the first (thongh that may hare little regard to matters of fact). nol make mat of it a new work, there is no invasion of ${ }^{1}$. muless the worls of the tirst have been at the same time taken. See Pruface to Napher's Ilomoirs of Demthe.
 contriluted for aud ineluided in encyclopadias, mazazines, retiews, other periodical works, and of books pullifluml in a series, was reculated by the Aet 5 and 6 Tict. c. 45 . The C. of such articles, ieing paid for and assigned. belongs to the fulaisher, but he cannot publish them separately
withont the consent of the anthor. The anthor, however, may raserve the right of separate pulbication, anil momy sull the rifle to use the article; lut, showh he recubilish any such article or articles. it may aly be hone in such a mamer as not to prejudiee the risht of the origimal publisher.

ID'enntic P'ucesumt Mresical Compmitions.-These with mult of representation and perfmance are, by the het or and 6 Vict. c. 45, subject to the same ( 6 as hooks. Strictly, a C. sonne canmot be publicly sums. or a tune publicly played, without the permission of the comperser a his assings. Yerses unst mat le taken from a periodical or coprright wom, and set to mmsic, for sale, without permission. A C. work of fiction may be dramatised without the consent of the proprietor, who has no statatory power to forlid the performance.

Lecteres and Pumic Athlarsas remain the (1. of the person delivering them. Ify 5 and of William IV. c. bin $^{5}$, printers ime 1 phlishers are liable to a penalty for printing ant issuing slokno addresses withont the consent of the author. It is maderston that no me is at liberty to take down a sermon as delivered by a clerryman, and publish it without permission; the act, however (s) A) makes some exceptions: protection is mut extended 'to any lecture or lectures delivered in any miversity, or public schom, or colleste, or in any public fommen tion. an lay and indital in virtue of, or accoming to, any gift, "uldament, or fommation.' Under this pernissive clanse, it woud appear that sermons delivered by elergryen of the Established churches, in endowed phaces of public wrship, are domed public property.

Letters, and every kind of gistolary correspandmen, are the promerty of the writer. The receiver of a letter may retain it for his own use, hat, strictly, he cammen puhbsh it without the permissinn of the semter or his hoirs, neither con he sell it as a eurinsity. The sale of letters of ristinguished indivituals is illegal, though urdimarily tolemated.
 eases there puoterl. As to the mule in this respect in scotlamd, see the procedines in the case of the Scoted Thistle newspaper, in Treine's report of the trial of Madeleme smith, pp, 9: and :

Nemespaper metter is subject tos the common liw of C., lont practically, and for mutual comenience, the intelligence in onc paper is frecly copied hy the more resprectalile class of papers with, anl in the less respectalle without, acknowlengment. The taking of lealing articles in the same maner might donht. less le checked; as wond also be the manthorised aloption of existing newspraper titles.
bunmerings, Mops, Cherts.- 1 , in thesp is secured ley several acts, more marticulaty the 17 (i,w, 111. c. 57 . The term of ( 6 is 28 years. Bach mamimer or map must have on the thate of pablication and name of phblisher. Those who infriuge C., forteit the plates on which the pirated cogravings of majs were printed: they forfeit also crey maten sheet, and five shillines for every print undisposed of. There is no 6 in sulbect.  sondpures, rasts, patherns of carpets and paper-

Coburinhe in the Colomiose- liy the Act 5 and of lint. $\because$. 5 , the 1 . of hooks, \&e., printed in
the Cuiterl Kinglom, is extemed to all liritish colonies; and the Aet $S$ and ! Vict. e. 5 , comerning the trate of the colmics, absolutely pohbiteri these dependencs from importing pirated editions of C. works. Practically, this last revitel act was mavailing. Large duantitios of chep reprints of Lritish C. Jooks contimuel to he imported from the United States into the British Ancrican pussessions. Remonstrances against these imporalarites at leneth lea to some special legis. lation. It was orlaned ley the Act 10 amd 11 Vict. C. ! 1. , that the colonies minht respectively enact a law to cuable them to import liwated C. works, on the filan of cxacting a custom-honse rluty in such works, the proceerls to be handed to the pronictors of the said coprrights. Colomal laws were accordingly enacted. The materstom arrangement is, that English publishers shall furnish catalogues of their congrights to the custom-honse authorities in the different colonies, as a guide for exacting the protective duties amounting in Canad to $12!1^{n r}$ cent. arl valorem). These measures are next on inoprative, aul the whole thing is little betto than a delnsion. So little is cullected, that pmbishers semerally have ceased to give themselves any comecrn in the matter. In short, manthoriser chap reprints of british (. works may be said to be freely imperted into ame sold in the eonmies; this kind of trade in itself tending t. indispose the Uuitel states to enter into an international law of $C^{\prime}$. with the United Kinglom. Latterly, pirated reprints of British C. works have hegun to be prolucel in Canda.
'opmpight in thar C"nitol stutes is well defined. The latest act of congress on the sulject is that of Fenmary :3, 1831. C. can le secured by any citizen of the United States or resident therein, who is the anthor of my book mape chart, or musical composition. The term of 4 is : 2 years from date of reenrling; but at the end of that term, the author it liwing, w, if lewh. his widow or child, may recond 1: for in mulitional term of 14 years. In cases of renewal, record to le published in one or more newspapers. The irst stej in securing C . is to record the cham, accordines to a certain form in the look of the elerk of the slistrict kepot for that purpose; at the same time lombing a chy of the work. Within there months thereafter, a copry to be sent to the librurian of the Smithsomian Institution, and another cong to the himarim of congress Library. It is reatisite that natice of antry of (: be printeal on the title-pare, ar pare immediately following. All prated copirs of $c:$ works are to be forfeited, independently of chams for damages by actiou at law. The C. recontel in my state extends to all the states in the Cuma. - 'ice limurier's Lan Dictionury w the C'uitul Stetiss (lhalalelphia, 1860).

Compight in Crimeny has been regulated as mepects daration ly the (enfederation ; a resolution of which, in 18:7, fixed the duration of literary propraty at 10 years and amoner resuhtion in listr. extombed it to the lifotime of the writer and for :H) wars after his dath. The laws mornating the contract of an athor with his puhbinder vary in the diflerent states. In Prussia, when :un athur asinns a C. to a publisher without any special stipulation, the pmblisher is catitherl to issum maly one clition, the extent of which he may determim. 'This principle is
 in the latter conntry in tha aboner of stipulation, buing limitad to low anges. lant a distinction is made in l'pussia betwen reprints in bew jssues
 rase of the former, the pullisher is loft free, on condition that ha. shall lray to the author, on the

Decasion of exh new issne, half the sum which ho paid him for the tirst. Num whitions. (1an the contrary, can be pmblished andy with promissim of the :uther, which must be given in wrotine. This privilotes is limited to the author's lifor, thanh his "hildran
 issume after his llath. In (antha, thu law if laze
 new reprints, lut in liavaia, the fermissinu at the auther is requirel arm for this purgum. 'Ithe rights of the poldishor may he transhman and those of the anthor hescomid to his heirs. Whan the rights which have hache comsoned th the palalisher "terminates tho anther hecomes again the unlmiter propricter of the work.
("upmeighe in Freme exists in the anthm :nn in lis whew for life, in his chidtren for twonty yearto anl in his other heirs ar assignees fur tom years after his own death of that of his whew. In Ion lymm the same law preails, with this exceptiom, that the right, whelher in ehidren or in other representatives, extemes to twenty yars after death.
Intmonetional. Copyright is a mintual arrangement between two combtries to protect end wher's enpyright, translations included. The Uniter Kiughom has now an arranement of this mature with flanLure, Delgium, Saxony, Prussia, France, and Sardmin (Italy). The I'nited states have crer refusted to enter iuto any international law of (. with lireat Britain; a circumstance, as is understomi, imputalue chietly to the oprosition of the leading lublishers of piratele editions of loritish (. works.
The late Right Ifon. James Wilsun contemplated a consulidation of the ('. laws, and such a measure is certainly tery desimalde. Amongt innpovements required may be cited the following: 1. An improved system of registration. As matters arw now contueted at the Ntationers' Hiall, any persom may make any ontry he pleases, with very litthe check in case of false pretension. A refiom in this particular shomld embrace a system of renintration in Edinhargh, and alsio in Duldin, as well as in Londun, for the convenience of the three sections of the C'nited Kinglom; the registrar of each suction to get copies amually of the other rusistors fur goneral inspection. A. A clearer mondrstamtine of the pasture of articles contributed tor periodicals, chegcloperlias, \&e. It would probally answer the main purposes of justice, if the promieto of the work contribated to were beld as havinus hy his stipulated payment, aryuired the $C \because$. muless where a speeial restrvation was made. \%. A protection to publishers for literary serviees paid under a salary. It is clearly absurd to expect that each particula* article, or, say, addition to, a formerty existing book, written in these ciremmstan.es. should te matter of formal assimment; and in practice no such assigment takes dace, Yet, with anthors diepresel to take advantages, there may ho cases in which the honourable umderstamenin as to the sufficiency of salary may he no protection to the publisher from at least a lamasime liticarion. 4. A remedy for the areat mistake made in 'talfourd's act, in the extension of cmpripht. By making this extension only to the repmentatives if authors who had nut parted with their engrights, the real ohjects of the act would he semend, ami an additiomal inducement to prudence on the prove of literary men would be established. see BookTix.uns.

## CO'RACLE. See CORRACus.

COTACOID BONES. In the mammalian skeleton, the scapula or hinde-hone presents a projecting hoay mocess termed the Coracoid Process, jectiny its supposed resemblance to a crow's heak (Lat. lomar, i crow); and from the ilea that the lones thich we are now rescribing, and which exist in all binds in sumian aud chelomian reptiles, and in the anometremata, correspond auatomically witis the comparatively slichtly developed coracoil process, they have received the name which is now miversally assigned to them.

As the uses of these lones are most olnions in birds, we slall confine our remarks to this class of aximals. It is olsionsly necessary that the scapular arch should he very strong in birds, in order to form a enlid vesistius fulcom to the powerful norments of the humerus and other wing-bones. The scapula (see $b$ in tise fix.) is a long, curred, compressen lome. astendiag alouge the back on each side of the dursal vertabre, imbetited in the museles to which it sives attachment, while at its tixed exurunity it assists in forming the carity of the

Stumam of Bion Owl:
$a$, the Flemnid oi shoullex-juint cavity ; $b$, the seapalit; $c, c$, the coracnid bone, artionlating at cne end with the stermum or breast-bone $c$, and at the other with the feapula $b$, with the clavicle $d$, and with the humerty or great bone of the wing. The inion of the two clasicles, $d_{1}, 2$, to form the farcula or merry-thought bone, is well shewn in this tigure.
shoulior-joint (i). The entacnill lome (s in fles.) is the ereat support of the shomber: for white at one oxtromity it sustrins the wing at the other it is dirmly spouret to the sternm by in boad and strons artirulation; infeed, it forms the main resistance to the anpuximation of the humerns to the medim plame, and retains it fromly in its lateral pasition. 'The scapman amb coracoill bum are amaybusem. (in' buitel by ossems mattor) at their puint of unim, thas finmine onllectionly the structure pmonary hanme the simelone. The chavielar, 小, 小, wheh are companel to form the forcula. combine to add to then stability of the whole apparatus.

prolegomena, in which his patriotic zeal was ofteu very strongly disphayed. He translated into modern Greek the work of Beccaria, Jei Delitti e dofle Pene; and by rarions translations aul other publications, exercised a great influence in awakening the minds of his comntrymen. When the Grecian war of independence began, C. was too aged to take any active part in it, but by his writings he shewell his sympathy with the cause of his country:

CORAL, a calcareous secretion or deposit of many kinus of Zoophytes (4. 5.) of the class Anthozou, wlich assumes very variuns, and ofteu beantifu forms, according to the different lats which govern the gemmation of the polypes of the different species. The C-producing zoophytes are compound animals, which increase by semmation, soung polype lads springing from the original polype, sometimes indifferently from any lart of its surface, sometimes only from its upper circumference, or from its base, and not separating from it, but remaining in the same spot, even when the oricinal or parent polype has ceased to exist, and pratuciner lmols in their turn. The calcareons depositiou berins when the zonphyte is still a simple polype-nwing its existence to oxiparous reproduc-tion-adhering to a rock or other substance, to which the caleareous matter becomes atfixed, and on which the C . grows on is built up, the hard deposits of former generations forming the base to which those of their progeny are attached. One laser of the calcareous polype cells of which the greater number of corals are composed, occasionally surrounls another like the concentric circles in the wood of exogenous treus; one lajer is sometimes deposited alwve another; the whole structure sometimes lunanches like a shrub, spreads like a fan, or assumes the form of a cur, a Hower, or a mushroorn. Under the common name C. are included many species, also designated Madrepores (q. r.), and some have received other names derived from peculiarities of their furm and appearance, as Brainstone C. (I. . .), \&c. In the greater number of kinds. ]esides the calcareous plates which form and separate the polype cells, and which are varionsly armaged aceording to the form and structure of the lolyes themselves, there is a more solid internal ior central calcareous part, formed by the additional deposition of calcarcons matter at the bottom of amph phispe cell, or from the common living lart in which the fulypes are united. The calcareous framerwork is further strengthened by a greater or less mixtare of homy animal matter with the pure catearems suhstance. This calcareons framework is analoymas to the cartilacinons, hathery, in tifrous famework of many ather com. bunud zonplate as Alremnime (4- v), us Durd Ahu's Fingros, Thin pulypers of the -ammen liza ! ("'oretlikun raloma) inleed rey mach racmble those of Alcyoniun: but the condral axis in this

(ima, shering the lolypes (Comallium rubrum). and other corals forming the family Corallide is puate silid, beine pmincoi in concentric layers by the living matmms substance, which envelopes it like the bork of a tree and from which the polypes propect like lauls, ur, when their tentacna aro expundel, hise little dawers. In the Mudeporide,
the gencral structure mose nowly resombles that of Alcyomizm. Many of them, lowever, lave the whole caleareous frameworls moverel as jutho Corablider, by a gelatinums lisiner sulstaner which unites all the polypes. 'The whole heintr port soose decomposes and disappears, whent the C. js tatkern out of the water : in mane speites, alanot innmedately ronning from the catareons piot as a watry slime.
(surals chicfly ahound in the se:cs of the warmom latitures, where they form extensive brakis at am very great depth, aml their varimus and brizht colours present the apmarance of sulaname flowergardens. Numerons spuctes are usuadly combined In the formation of a single ('. red, and resperetively accury differste places in it. ('orals uf the: bumbling gemas Poxitus usually ocerty the expmend alde of the reef, and with thom is asson cinted Millepora complencter, a sleves which forms thick vertical plates, united at diberent augles loy ther edges, the onter phates only beiner twinater by living polvpes. In the stiller water within are many more delicate limes, and in the gniet sheltered depths, brainstone corals and flower-Like forms apmar.

The C. of commeree, or common Fivi ( .-so mach almired for its fine colour, susceptille of at hish polish, and mueli used for ornamental purposes -is chicfly obtained from the Mediterrancan, in some parts of which extusive comal tisheries' are carrice on. It is brought up, fron eonsilurable depths by means of a sut of grappling apparatus dragged after a boat or lowts; the pheces lexines Iroken from the botton ly keanas of womi which are sumk by weights, and then entanglerl amoner bemp, Red (. has a shrub-like branching fomm, and grows to the leight of abont one foot, with it thickness like that of the little-finger. Much of the C: of the Meditemanean is exported to Thlia, lont lied C. is also obtained in the lied Sua, the Persian Gulf, \&c.-Black (. (Antipathes), the axis of which is rendered still more solith by the preater maxture of horuy with calcareans matter, is still name highly prized.-C. Was known to the ancients, and was used for ornamental purpuses hy the Ganls.

CORAL FLOWER, or UORAL TREE (Erythrinu), a gemus of trees and slumbs, of the natimal omber Leymminoser. sub-order $I^{\prime}$ 'pilionaces: of which the species, matives of tropieal ind subtronical regions, generally produce lomy spikes of beautiful flowers of a rich didl crimson or a scanlet colunr, resembling comal. The leaves have three leatlets. The standiod of the flower is remarkain] longe The U. F. of Brazil (E. crista malli) is comunon in Jritish green-houses. The Indian U. V'. (E. Indicet) is used in the East Indies for hedges, its stem being covered with thorns. The wond is so light and spougy that it is used for the largest sizes of corks.-Jatrophea mulf: fide, a very different plant, of the natural order Euphorthacere. bas alsu acquired the name of Cural Tree.

COLAL ISLANOS exist most abundantly in the tropical and sult. tropical parts of the Pacific Oecan. The formation of coral goes on, in fivournble circrmstanees, with wonderful rapidity, for masses of coral have been foumil to increase in height severad feet ink few months; and a channel cut in the reef swomuding a comal islauk, to permit the passare of a schmoner, has been eloked nr with enme in ten yours. It was at one time supposeci that the coral jolyres began their labours at the jottom of the occun, and raared their pile from its greatest
depthe; lat it has luwn ase rtainerd that nome of throm live at depthe of mone than twonty or thirts fathons, and mont of themare inhabitants of monele shallower water. It iphears, therefore, that the foumation uf thair still narvellons structures mast loe om rews 1 hat dow mot reath the smface, poobaly in most cases voleanie rocks similar to those whind, lexiner further upheaven, form the
 Arommd these volenaic ishamk, whinh-althrush some of the:n are the larenst ivlants of the lacilic ()coan ase fin fower in number than its $\therefore$. S, , a iringing reaf of coral is often fouml inmoliatoly attached to the land; whilst in many uther censes, the rede surmumes the island, the intervonimg sace -of incegrlar, hat nowhere of rreat wilth-furnoing a lagon or chanmel of still water, protectesl hy the reef froms winls and waves. deeombine to a theory propnsent by $\mathrm{Mr}^{*}$ Inarwin, aml How siry senerally acerded, this latter kime of rece is fusmad from a reef of the fumer or merely frinaing linn, by the gralual sulasidence of the roeky lasis carryinse lown the fringe of coral to a onater depth; whilst the greatest activity of lifo in ai played loy bolyes of the limes most prabactive of lorge masses of comal in the outer parts which are anost exposed to the wares. In this mimmer also le aeronats for the formation of troue C. I., or afolls, whels consist merply if a normw reef of coral smmonnling a central laromo ; and very often of a narow deef-nerhajs Falf a mile in lrablthclothed witl luxurimet veretation, lombered hy a nurrow beach of snowy whiteness, and forming an arc, the convexity of which is towarls the prevailiner wiml, whilst a straight lime of reef not renerally rising above the reach of the tide, forms the chord of the are. There is uenerally a navigathe passage throurls the reef into the enclosma lagrom, the waters of which are still and beantifully transparent, amd the depth of water chose to the precipitous sides of the reef is almost always vory grat. The passages thrount the recofs suroumding the lareer roleanc islands are often mpposite to the mouthis of streams; lut even where this is not the case, there is it strong current in these chamels from the flux ant reflux of the tirles. 1slet: bearime at fer ewn trees often appar at intervals in the line of a low coral reef, and very generally mand the sithts of passages thoush it. When a reef hav whehet the surface of the water, sand, shells. fras mumen of coral, and uther sulstances, legin to acemmalate, and cocoanut trees often srow where the waves still wash their roots. (ORDELIERA ('cmol-wearers') was the name aphinal, in France, to the strictest lranch of the Francisan friars, un aconut of their wearing a girdle of konted cord. It ane period, this order
had no less than ost male and 123 female convents. During the Ji-volution, the name was applied to the members of a political club which assemblet in the chapel of in Franciscan monastery, and exercised (chintly in Paris, however) sreat influence on the progress of the revolution. It was instituted in 1790 . Its leaders were men of rarions olimions, including Ianton, Hébert, Camille Desmoulins, and Marat. The C . were generally (ipposeal to the Jacolins (q. v.): lut it may be asserted that in these two chuls all the great popnar movements of the revolution had their origin. In the session of the C., May 오, 170.3. the insurrection which marked the close of the Reiga of Terror was plotted. While the club was at the height of its influence. Camille Desmonlins commenced to issue his popalar journal, Le rieus Cordelier. Suon after the fall of Danton, the C. club lost its influence, and was an insigniticant affir when it was closed by the Convention.

CO'RD-GRASS (Apurtina), a genus of grasses having compound spikes, the spikelets arranged on one side; and having unly one perfect floret, and yery unerqual clumes. One species, st. stricte, found in mudly salt-marshes on the east and south-east coasts of England, although remarkalle for its extreme stiffiness and rigidity of habit, is used for making ropes, on account of the toughness of its fibre.

CORDIA'CEAE, a matural order of exogenons plants, closely allien to Borafiner, from which it differs chiefly in its drupaceons 4 -s-celled finit. It consists of trees with rough leaves, chiedly natives of the tropics, althongh some are found in cool parts of South America. The firnits called Selesten ( $(1 . r)$ ). or Sebesten Plum, helong to this orler, and to the genus Corbio; which also contains some valuable tinber-trees, particularly the Spauish Elm, Prince Wiohl, ar Buis de Cheprer of the West Indies (C. $G$ Grasacomthus). It is in lank-brown wool, faintly striped, toyrl, elastic, and fine grained.

## CORDI'LLERAS OF' CENTRAL AMERICA.

 The worl Cordillow literally signilies a chain, and is applial in Spanish Anerica to a chain of monntains. The C. of Sonth America are described under Andes. Those of Central Ameria extend from the commencement of the Isthmas of larien to the north of Mexico and Califumia, and surcad themselves, to speak gencrally, from sea to sea, presenting many diversities, and occupring the states of Now Granada, Gosta litea, Nicuragua. IIonluas, San Salvalur, Cintemala, the Mexican Cunfeluation, ant Jow hexieo. They gralually inerease in cleration from the Isthmus of Panama. where at one point they are only 260 fect ligh, until, iu Mexien, they reach a heirght of more than 17,000 foct, mid form magnificent plateans.COBDON, in military operations, is it line of sentries pholosing ur suarding any partionlar space of groumb to prevent the passage of 1 nersons other than those belonging to the amy. The sontrics wre placed within sight of each other. If int undel to ghard wainst contagious diseases, it is called it C. Suntaire.

COBROVA, or CORDORA, a city of Spain, carital uf the province of Cordowa, is situated in the milst of olives and palm-trees on the Gumblquiver, here crussed lyy a stone hridee of 16 arches, constructed by the Mowrs. Lat. $37^{\circ} 52^{\prime} \mathrm{N}$, Ions. $1^{\circ} 19 \mathrm{~W}$. Its wh Mowrish walls and couventcowned hill in the lackgomel give it quite an Griontal aspect; but its lanty, like most Oriental beanty, is morrly exterual: inside, its strents are harrow, dark, anil dirty, with a gencral appearane, of decaty. Natay garblems are caclosed within the
walls. Among the principal buildings is the cathedral, formerly a Mohammedan mosque, an immense structure dating from the Sth c., and gencrally regarded as the finest type of a Moslem temile in Europe. Internally, its columns, composed of various coloured marble, jasper, and porphyry, form a perfect grove, there being still some 850 remaining, though at one thme thare were about half as many more. The bishop's palace, an old residence of the Moorish lings now used as stables, and several of the churches and convents, are also noteworthy. C. was at one time celehrated for its manufactme of Cordovan (q. v.), but that has now greatly declined. Its siversmiths and filigree workers have still a gnod reputation; and there are manufactives of paper, silken fabries, bats, \&c. Its inhalitants are proul, above even the pride of Spamards. Popr 5n, 1000 . C. is a very ancient place, having been fommed by the Romans as Corduba, 152 в. с. Cesar. 45 г. c., put 29.000 of its inhabitants to death for having sided with Pompey. T'aken by the Goths in the Gth c., it soon after fell into the lamls of the 31 oors, and lecame the capital of the Moorish mpire in Spain. From the 9th c. to the 12th c., it was onc of the greatest centres of commerce in the worl, and is sail to have contained a million inhabitauts. It was taken by Ferdinand II1. of Castile in 1236, and never afterwards regained its prosperity. In modern times, C . was taken and plunderel by the Frencl under Dupont in 1508. C: is the birtlplace of the two Senecas, the poet Lucan, and the astronomer Averroes. The province of Cordora has an area of 4159 sfuare milcs, and a population of 802,535 . See Andaltsia.

CORDOYA, the capital of a state of the same name in the Argentine Confederation (q. v.), is situatel on the Rio Primero, a tributary of the Parana, in lat. :3 $96^{\prime} \mathrm{S}$, and long. $63^{\circ} 55^{\prime} \mathrm{W}$. It was fonnded by the emruerors of Tucuman in 1573 . It has a cathedral and several churches, with a population of 25,000 . The state, of which C. is ciuital, is situated near the centre of the Confederation, and contains alout 57,255 square miles, with it poplation, in 1535, of 130,000, who occupy chietly its western section. Cattle, sheep, and enats are numerons; ann the soil is much fitter for maize aml fruits than for wheat. The shirface is mustly mountainons; and the ranges, which here and there are 900 feet above the sea, are interinersel with barren flats of stone and sand.

COT:DOVAN, a suceles of leather prepared from goat-skins. It was oripinally, and at one time exclusively, manfactured by the Mours of Cordova, and hence its name. The bost C . still comes from the Levant. It is used in hookbinding, and in the there kinds of bout and shoe making.

## CORDELINE. See Tr.

Colied (bative name, Tiocom-kod:; modern uflicial name, Choosyen), a peninsular lingdom of Whaterm Asia, tributary to China. It is home E. by the siea of Japan: N. by the Strait of Cimea; W. by the Vollow sia: anil on the N. Wy Manteluria. Inclueling the subject territury to the north of the peninsula 1 wopro it extembs from $34^{\circ}$ to 4 N. lat., ame lics between $121^{\circ}$ and $131^{\circ}$ E. long. French missionary amals, as well as the voyuters of Captains 1 Iall and Mixwell, our knowledge of this remote and unsocial state is diviven. The wat coast of the peninsula is studbed with hamberds of small rocky islauds-the Corean Arhipelace so that one of the titles of the soverign-King of 'rom Thousand Isleg-is somethmer more than an "axtom
 West coast, is 60 miles in circhmfornce, ant has at central mountain, booo fect abose the level of the Sca. C. is separated form Mantchuria by a lofty range of momatains, the Sherenf-uroden; and another range, the Chim-tai, branching ofl from these in a sonth-south-east direction, skints the east side of the peninsula, to the Strait of Chea. The gemerall slone of the land is towards the Yellow Seat.
'The Irele-kiang and the T'unen-kiung are the langest rivers known to buropeans; both are deep, and rapid, and have their source in the Shansshan range. The former takes a western coilme, aml cmpties itself into the Vellow sea; the latter flows to the east, and falls into the Sea of Jaman.

The climato of C. is severe, especially in the northern parts, where snow falls in great quantities; and we learn from Itamel that at Kiny-kituo or Kin-phe, the capital, in $37^{\circ} 35^{\circ}$ N. lat., the river Ham-kiang was frozen so hard by the end of November, that loaded horses crossed upon the ice.

Gold, silver, lead, iron, rock-salt, and tonazes, are said to be amongst the minerals uf Corea. In the south, agriculturil productions, such as rice, wheat, cotton, Hax, ginseng, and tobaceo, with fruits of many kinds, are raised in abundance; silk is also produced, and cultivation is diligently carrica on; but the northern contiuental districts are mountainous, barren. woody, and thinly inhabited. Here wid animals, such as sables, martens, bears, deer, and boars, are plentiful ; and the royal tiger is also a native of the country. IReptiles are mumerous, and crocodiles, which sometimes attain the lenoth of 30 or $\mathbf{4 0}$ feet, infost the rivers. The commerce of U . is confined to China and Japan.

The inhahitants, believed to Ire of Tartar descent, have been described as a fine, well-male mace, with agreeable $\quad$ unnners and prepossessing apparance. Their civilisation has been derived frum China, and the Chinese langrage is used by the literati, who study the Confucim philosophy. Of the veruacular tongue, little or nothing is known, except that it belongs to the monosyllabic class of languages. Chinese Eudhism is the prevailing religion, and its temples and priests are numerous. The Frencb Roman Catholic missionaries have made numerons converts. The population has been estimated at 10,000,000.
C. is diviled into $S$ provinces, and contains some 360 citics and towns. The goverment is a despotism, and all the lands are held from the sovereign, who claims one-tenth of the agricultural produce. He presents an annual trilnite to the emperor of China, but the latter does not interfere in the interual administration of the country. The Corean sovercign appoints one of his sons as his successor, and his title is confirmed by the court of Pekin.

Annales de la Propagation du la Foi; Hamel; Captains Hall and Maxwell ; Williams.

CORE'GONUS, a genus of fishes of the firmily Solmonidu, having the first dorsal fin further forward than the ventrals, and higher than it is long. the scales large, the teeth either minute or wanting. The species are numerons, and some of them inhatit the sea, others fresh-water. To this gemus helong the Guynial of the lakes of Wales and Cumherland, the Powan of Loch Lomond, the Pullan of the lakes of Ireland, \&e. From their herring-like aIpearanec,
the (iwyinal an! Powan are often callend Irowe arter Herring. Siome of the speceics foum in the lakes and rivers of Nonth America are also known as Itroting Suflem: but a more valualde specios, recrarlen as one of the finmen of all fi-h, is the Whma Fisu (Cosetpidus or ullmes) of Sirth Imerica. Othere suches are fonm in the rivers and latso of burone,

 with Mathoo Simomoli, and the violin with latomin.
 where le was well recorval. In the follensins yon 1s. returned to Italys, and fixed his abole at fomo, where in $165:$ he phblushel his Tuthe sonntus, for, Trua I'iolins med as Buss. In l685 appared and ther sct, bearing the title of binletfille Cumen. A thired
 ant 169t. In 1700 apheared lis somation for violing aul bass, or hatesichond. 'Ilise work is one of $\because \because$ is master-pieces, amm has $\mathrm{I}^{\text {daced lima in the first ramb }}$ of instrumental composers. (O's greatest effort wiss his Conemti cirnssi, which appeared unly six weds. lufore his death. The style of ('. is me of the vary lest, and his works contimue to the presunt lay models of classical study in instrumental music.

CORENTY'N, a river of Guiana in South Amorica, rises in lat. I N., haviner its head-waters 25 minh to the cast of those of the Essequilo. With a generally nowtherly course, it separatos the Duteh and hititits portions of the country; and at its month, in lat 6 N. and long. $5^{\circ}$ W., it forms an estury of 2.5 miles in width. It is narigable for boats alout 1.50 miles upwards, measured by its windings; and at a paint still higher, where furthor exploration was imperded by a scries of cataracts, it was found to be bo yards across. The C . is one of the streans ly whith Guiana possesses comparatively easy moans of commmication with the basin of the Ambazon on the one site, and that of the Orinoce on the "ther.

CORFE CASTLE, a village in the minde of Purbeck isle or peniusula, in the south of Dursetshire, 24 miles east-south-east of Unchester. In the vicinity are stone and marlle quarrics, and clayworks for the potteries. I'o, 1906. A castle, wivme its name to the village, stands on a neightaming hill. It seems to have been foumben in the loth c., aml was long one of the strongest firtiosses in the kinglom. Here king Elwatil the matyr was murderel ly his stopmather, Elirika, alnut !so, and Kiner John. during his disputes with his barous, kept his regalia here for safity. Here also, in Ibia, Lady Pankes hefended the castle for six weeks against Charles 3. It was dismantlul hy Fairfax in 1645.

CO'RFU , the most mortherly of the Ionian Islands
 It has a lemuth of about $3 s$ miles. with a lireaith varying from 3 or + to 2 bailes. Area, 27 square niles. Pop. (1S5S) S5,2(2). Like the jest of the lonian Islands, it is momentansus, aml the mountains are generally naked aud iry, the highest
 feet above the sa. The valleys, however, are very fertile, and yield divenil, winc, honey, wames, firs, \&c. Salt is also produced in sume quatity. The climate is gencrally midd and healthy. The principal town, Corfu, is the capital of the lomian lshuds, the seat of the parlianmutary senate and highest judicial court. It is also the residence of the British Land Hosh Commissioner, aml of the archbishop of the Greck latin Church. It is situated in an elevation, has some good streets. and an efinate commanding a tine view amd
forminer a fishonalde prmmade. The governmes palace. the miversity fmmeded ly Lord Citiford in $15=t$ and the cathedrat, we among the princibal Duldines. The tawn is chefendel by two fortresses, and sarrismed ley British tronges. It hat a purmlation if about 20,000 , ani a consicherable trate. Steaners Ily regularly leotween the port ani Malta, l'atris, Dlexmmia, and Trieste. The lanmuace spoken is considered the softest of the moderis Greve kiakets. The anciont nome of the island of $(\mathrm{C}$, was friodote It is sail to have been weenpich firse lig the lhatachoms, and then by the Limmmians: lat the acconato of it axe sonewhat anythical until its settlement by the Corinthians
 after acturest a consilerable importane . It soon quarrelled with the mother-enustry and after many vieissitures of fortume. passed mater the dominion of the Romans aloont oze E.C.

CORIN'SDER (foricnotrom sotivem), an ammul plant of the natural moler F mbollifiole, with hranchings stem, 1-2 feet high, the lower leaves bipimate, the nper leares mone componme, and plobose froit. It is a native of the sonth of Eumpe and of the east, and las Lonir lien enltivated for the sake of its fruit; and has this become naturalised in some parts of Emeland, althomgh its froit ( ${ }^{\prime}$. seed) is much less used in Eritain than in Ciemony, and swme uther Furopean comitries. "Jise whole plant, when fresh, has a very offonsive smell : lat the ripe and perfeetly dry frnit has an acreeable aromatio smell amd it sweetish aromatic taste. It is used in medicine as a carminative, amo as a correetive of ecotain jurgatives; alsu in domestic cermomy as an aromatic, bemg vory "ften mixel with lirend in the north of Europer: spiritums licpors are flavaned with it amd emfeetomers cover it with sugar, to make a well-known Lime of comfit. In the sunth of Englami, it is common to sow C. and caraway torether. the 1 '. fichling a ery in the first yea, ant the varaway in var's fullowins. (A. delights in a rieh soil, ame is moll coltivated and used in lmatia.

CORIGLIX'N, a town of Naples, in the province of Coblabia Citra, about 4 miles from the linlf of Taranto, heautifully situated on a hill, romed which it is lonilt in the form of an amphitheatres a tine all] eastle crowning the summit. The hase of the manemee is clad witi lamon and orance groves, amis which rise sume clenant villas; the whole remblering $r^{\circ}$. one of the most arterthle places in the C'alabrias. It has extensive Iupurice manufice turies, and a trade in wine ans fraits. I'ope ls, ouns.
(i)lil'NG: a maritime town in tho distriet of F:ajalmamely and pesidency of Mulats, stmme wh the sonth side of the estuary of a river of its when name, one of tho brawhes of the dimburys. Its harlunar is burasted ley a bar, which at sprimether shews a clepth of 12 or 14 foect. Pesinkes harimit a considumble semeral trade, it is the lest place an the coast for the lmiliting and reparing of small
 of the son. In Way 1750 , dwing the motheenst monamot, the tile iverwhemed the eity and the

 lwhind it, besbitos the mone oribimary traces of its
 1he wationarlanal.

 Jowentia, 'llat date of her lirth is not Jinown, lent

 S"lian states that on five dillerent oceasions shas vanguisherd her contomporary, limdar, in a pretic
contest, but Pansanius alludes to only one victory of hers. Her tuwnsmen shewed their apmrecation of lux genins by pacing a statue of her in their gymnasium. She was surnamed IUiu ('the Fly'), probalily on account of the tenderness and softness of her $\mathrm{p}^{\text {wems. }}$ Of her numerous proems, which were comprosed in the Anlic dialect, only a few framments remain, which have been pulbished by Sthnedervin, in his Delectus Poetomen Grecormit (Gintt. 1539). and by Bergk, in his Lyrici Puete Grarci (Leip. 184.).

CO'RINTH (originally called Ephene), a famous city of anticuity situateri om the isthmus connecting the morthern division of fireece, or Itellas proper, with the I'elopunesns. Its citadel was the Acro(arinthens, an isolated hill 1886 feet high, separated from the Gncian range on the north of the isthmas ly a ravine, and forminc, in the opinion of Colonel Wure, the most risantic uatural citadel in Europe, nelther the Aeropolis of Athens nor the fortress of Iilmaltar boime alle even remotely to compete with it. It the norchern forat of this hill lay the eity of C.. on a broad level rock nearly 200 feet above the level af the isthmms. It was pobahly founded by the l'homicians, who had various settlements on the Grecian coast, and who could harliy have failed to notice the extraominary maritime advantages of its situation. Iccordinu to its legendary bistory, however. it was fommled hy Sisyphns, the Eotian, about Inho b.r. It was then conquered hy the Heracleide, who ruled as an ohtarehy for twelve geuerations, when they were expelled liy Cyselus, the father of leriamier. with the lelp of the populace, 657 B . C . After a period of 75 yoars, the Spartans-the great (wnemies of demucracy in Greece-established again a sort of aristocratic govermment, and C. now limares in history as the close ally of Sparta. In the Pelommesian war, it at first furnished the greater part of the the et employed against the Athenians, Int afterwards lecante jealons of the Lacedamonian fnwer, and was imhned to league with other Greeian states agamst it, $395 \mathrm{~B} . \mathrm{e}^{2}$. The war which eusued is known as the rempinthian Wrer, and lasted till the peace of Antalciulas, 3S7 r.C. In the strife whicl broke ont lotween Thebes and Siparta, (. ramained faithonl to the latter. After the battle of Chreroneia, :3n r. f., in which the likerties of breece were erushed by the Macedonians, it was sarrismal and hed lis the latter. Subseymently, it was the centre of the Achean league formed irainst the Lumans, and in rerenge was utterly destroyed (Itic v.c.) by L. Alnmmins, the Roman generil. Wor a wholu century it continued in ruins. In 46 n. Co. Julius ciesar rehailt it, and make it the eapntal of Achaia; amd althongh it never asain attaimed its furmer importance, it became lioth porsperoms and pworful, st Pand planted a ('hristian chureh bore, to whioh be also addressed two lopistles. l'manims, who visited it in the olde. of the ('hristian era, states that it them eontamed mumaras publie buiblinss. At al later periond it ranme into the jussassion of the Western rmperors, fron whon it priser intw the hands of the Vemetians. In lfas A. 1\% it was compured ly the larks buler Nhblammod Il.. reworeral hy the Venctians in llist, and rotakoll los the Turks in 1515 , who
 inlablitants, whan arry un a little trale in dried froits, wheat, mil, houms, and wak.

 is sairl to have lexem invonterl hare and at the time of its eaphture by the liomands, it passessend summe of the fincst pictures in firacers. Among these, Wats the pieture of Panchat, by Srintides, for which Attalus ollered 600,000 sestarees. Areluteeturns statuats. and fronze-work also fontisled, and eatior, during the reign of Periander, poetry was endtivated, Arini having either invented of impmone the dithyramh in Corintlo. Jiterwards, lowever, no attention wals paid to literature by the inhalitants, and it las breen noticed that amoner the illastrious writers of Curece not a single Corimhian apruars.?

CORINTII, GULF or, or CULF OF LEPA'NTO. An arm of the Menliterranean extending from west to east through the centre of Greeet, from the Lomian to within about 5 mides of the Egean lioa, thas almost dividing the lingalom into two parts, the Norea forming the southern portion. Its greatest length is about 75 miles, with an avorage brealth of 15 miles. The outlime of the coast is exceedingly varied, and the scenery is everywhere as attractive as it is rich in comtrast. The narrow nock of laml, separating the Gralfs of C . and Egina, and mitiner the Morea to Attica, is ealled the Istumes of Corinth. It is variously estimated, accorling as it is measured from different points, at from 10 to 20 miles in length, ame its lueatth varies from 4 to 5 miles. The project of cutting throngh this istlimus, in orelor to unite the Ionian anul Aerenn Seas, was one early entertained, and attempted to be carried ont hy Nero without suceess. 'Io protect the Morea from land attack, however, a strons wall, flanked with towers, was built acooss the istlmus, aml traces of it may still be seen, as well as of other remans of antipuity. The celebrater Isthmian graces were contested ulon this traet.

CORI'NTIIAN O'RIURR. Sec Columa.
CURINTHIANS, Epistles to the, were waitten by Nit Paul, 57 or 58 A. 1. The first was compused at Ephesus; the scoond, accurdinis to senural pinion, at l'hilipli, lont this is dondotful. The gemuincosess of both is all hat maversally recognised." From the contents of 1 Cor., chap. 5. verse o, it luas been coneluted hy many theolnigians that Paul must have written a previous epistle, now lost.

CORIOLANUS, Cuts or Cnaes Marmes, a Foman patrician, swnamed, according to the halffabulons legend, C., on accomet of lis capture of the town of Corioli, belonging to the Vulsei (f!? म.c.). Of a proud and hanghty spirit, he was strongly olposed to the plebeians, whom he looked mon as the 'encmies' of his order ; amt on one occasion, dutins a time of famine, he argued in the senate against a gratuitous distribution of the corn which hat arrived from Sicily, and insisted that the plebeian tribunes, lately institutel, should dirst be diseharged from "ffice. For this he was impreached, and lanisherl. He took refuge among the Volscians, whom he aided in their waw with the Romans. His rictories at the heat of his Volscian troops alamed the liomans, who, on his aproach to their city, sent a variety of deputations to plead with him. He was aleaf to every eutreaty. At last, the noblest matrons uf liome, healed by his old mother and his wife Volumma, lealing her two chibiren, came to his tent. Ilis haming dusire to be revenged on thase who had dishonoured him was cooled by the tears 120

market is generally stripled off a year ur two lefore it wouk haturally come away, atm the provecs is repatel at intervals of six ur whit sears. The bark of yomnerg trees and laranclues is wither useless or of very inferior quality ; it is only after the thind peeting that grond ( 3 is fromberl. The removal of the (c, being not the ramesial of the whale bark, bat only of extumal layets of sumby cellutar tissuce, all wr greator part of whimh has cuased to, have any true vitality, and las beente an incmabrame to the tree, is so far fion homas injurioms, that when done with proper come, it rather promotes the health of the trees, whish continuestulill crops of (1. for alonost 150 years. In tripinas ofll the C., lomgitudinal and transiverse inci-iness are mate to the proger depth, and tach pinex is than out away from the tree by a chured linife wath two hamlles. The pheces are suaked in water, fresest il it, hrict, and supurficially charred, to remove deayed parts and coneal blemishus, bufore they are parked in hales for the market. Buides the nse of $\mathfrak{C}$ for stopuing bottles, casks, de. it is much used, on acoomt of its lightreos, for tloats of nets, swimminebelts, de. ; and maccomut of its inmurmealality to water, amb its leeiner a slow combuctor of heat, bumer soles of shoes are made of it. All these uses are mentioned 91

## CORK,

by Pliny: hat the general employment of corks for fliss luttles apmears to ilate only from the lyth contury. The A"monish Blach wed ly painters is mate ios buning C . in close vesscla, and the parmes of \& are carefully kept by (C.-cutters for this furnuse. Thore are many ather applications of this Valnahle sulistance in the arts, which cannot here le ictailed.

The U.-tree is oceasionally fanted in the sonth of Luphad, hut the climate is not suficisutly wam.

The wood of some trees pussesses the celhuar sponginess, lightaess, and elasticity of $C$ in such a degree as to be sometimes substituted for it in many of its uses, as that of the Anome pretestris (Corkwood, or Alligator Apple) in the West Indies, \&e.

Conk-cetming. The lark. after leing cat into square pieces or shects, is 1 rossed, to remowo its natural curvature and hatten it. If it is foud that simple pressure las mot flatemed it sulliciently, it is heated on the convex side, and the contraction thas produced straichtens it. It is then cut into slips, and these slips intosynares, acoording to the requireil size of the corks. These are rumded by the corkcutter by means of in brom sharp kuife ; the cork is hehl in the loft ham, and rested against a block of woud, and the knife prohed forwarl, and at the same time its edye is made to lesmine a circular curve by a skilful turn of the mist. The linife requires continual sharponing; the worman has a board before him on which the knife is rulhent on each side effor cuesy cut.

Many attempts have been male to cul corks hy machinery, A patent C. conpmory was estallished a fuw years since, hut it failed. The chine ditionlty in ajplying machines to this purpose arises from the necessity of continually sharpuming the knife ur cotters, for it is a curions faet, that so soft a substance as cork blunts the touls used in cuttinu it far mure mapielly than do the hamest or ton chest of metals. A combenter's kife requires shamuning every secmat, while the torl that is uscil for Jlaning, tuming, or luring sted will wark continuonsly for homs withont sharenening. la most of the machines, the corks, after luing chet into syoures of the required length, are made to wordue an amp
 revolving catter-wheels, hollow cones with interand enters, recipmeating blaikes, tontheal catters, de., are hrought to bear unon the wheming cork.

## CORI, Rock. Sco Asbestu's.

CORK, a municipal and parliamentary loranh, and river-port of Treland, capital of the county of the same name, is sitnated on the river Lee, where it divides into several lanaches, 11 miles abose the entrance of tho noble landlocked hardmar, hato the ithantio. The eity stands in the centre of the valley of the lece, mind high gromels and hematial pemery. The entual part of it is built on an islam, formerly a swam!, which the word conk, Cownh, or Conowh imply. The rest of the city lice on the borth amp sunth slemes of the riveranks. The
 the fronte often weather lated. Nime hrikeremess the river to the conerel idom?: ']'we humbed :and forty arres if lual raldinal from the river form a juhtic perk, anl thare is a puhlis walk, a milo laif am limal by maha elns, on the west of

 and lows: and lawn's rollow, a tine Tulor-

banks of the Lee above and below C. are richly planted, and studded with villas. C. harbour, noted for its size and safcty, could contain the whole British navy, and has been the main souree of the rise and progress of the eity. It is a basin of 10 square miles, shat in by hills, and is formed by the estuary of the Lee, which is navigable to ahout a mile above the city, the tide flowing up thus far. The estuary contains several large isles, rising abruptly and high above the water, with narrow chamels between them. The entrance is by a chanuel two miles lyy one, defended by batteries. Sjike, Hawllwhe, and Rocky Islands, which are oceupied by convict and ordnance depots, artillery barracks, and a powder-magazine, are within the harbour, and are strongly fortified. On the shores of the estuary are the towns of Passage and Queenstorn, formerly Cove of Cork. C. harbour is much frequented by wind-bound ships and ships waiting orders. Vessels of 600 tons reach C. quays. In 1853,4370 vessels, with an aggregate hurden of $753,62,5$ tons, entered and cleared the fort. The chief manufacture 3 are leather, iron, gloves, ginghans, fricses, and dom. There is also much distilling and hrewing. The chief exports are grain, provisions, butter. live-stock, and Ginen, valned at several millions sterling yealy. Pup, 90,022 , of whom about fire-sixths are Roman Catholies. C. returns two members to parliament. U. seems to have arisen in an albey founded in 609 by St Finbar, and having 700 scholars. The Danes in the 9th c. built the city walls. Dermod Maccarthy, kime of Cork or Desmand, surrenderel it to Henry II. in 1172. ('romwell hesieged and took it in 1649, and Alarlhorough in 1600 . James IT. landed at C. in 165s. In ©., William I'em, the founder of Pemsylrania, lecame a Quaker, with several of the soldiers of the repullicangervison.

CORK, a maritime comity in the south-west of Treland, in Munster province, the southmost and largest of the Irish contutics. It is bounded on the N. Ly Limerick, E. hy "liperary and Waterford, S. ly the Atlantie, W. ley Kerry. Greatest length from cast to west, 110 wiles; greatest breadth, 70; average, 34 . Area 2585 square miles, ahont two-thirds of which are arable. C . is hilly, with great varicty of surface. The west ]rart is rocky, momatainums, wihd, and bocey; the east and south, rich, fertile, and pieturesulue. The ranges rum east and west, except the Boghra Mountains, which spreal unt with a derp logsy surface letween the Lee and Blackwater. The coast is bold amd rocky, and from its iudentations, 9.00 miles long, the bays, which rum 3 to amiles inland, admittiog large ressels. The chief brys are Bantry, Dumnanus, Clonkilty, Kinsale, Cork IL:mbour, and Youghal. There are many isles off the enast, the chiof lome Whibly, Dear, lmisshorkin, Freat Islam, and Cape Char, in lat, $50^{\circ} 25^{\prime} \mathrm{N}$. amd long, 90 30 W., ant, with the exception of a rock 4 miles to the sumth-smeth-west. the somblumst pint in Imani. In the west, 1 ' is diviled from kerry hy a rathe of Nilurim elpyate, rmaing nowheast and noth, the rhicf points luine 120 to wem feet hich. distributed speins. It was fommerly sometimes tamed in Englanl. to le enployed in catching fish. and is still traned to this use in Chima.

CORN (Ger. Kom) meant minarily any small, romm, ham lerty, like a sed. 'This general hatang is still scen in its application to concretions on the feet. It is allien to the Lat. g/rmom, grain: and to Gier. Krm, kernel. Is usually aphlied, C : is a generim name for all seels used in makiup loreal, especially the seeds of cercalia. But it lias alsu a sureitic sense, and denotes ila any comatry that grain which furnishes the prevalent ineal-stintf of the people. 'Thus, in Englami, $(\cdots$ means arbont: in America, it means maize; and in Seothad, outs.

CORN LAWS, the name f"pularly given to certain statatory cmactments which hat for their object a restriction of the trale in grain. The English C. L. date as far hack as the year 13Ba, in the rejgu of Elwarl IU. Before this perionl, there sems to have been a genemal rule carrient into effect lyy the crown against the expmation of any grain ; aml the act of thto macts the prohitation, but at the sume time excepts C'ilais ind Graschine, with any other phaces whinh the king may aproint by licence, from its operation. In 1303, the arrangement was reversed, and the right to expont was made remeral, mokes to those phetes to which it was prohilited ley royal proclanation. An act of 1435 pernitted expurtation when the price of wheat did mat exeed bos. Sel per quarter. Hitherto, there seem to have fren no pahnitions against importation; lout in 1463, an act was passed photihiting it so long as the price at home was bolow the 6i, Sol. at whirh there was free expertation. Thw next change was in the mign uf lifenry VIlI., when an aict of 15:34 prohilitenl all expurtation exeepet ly liconce specially srambed bumber the great seal. This act wis not found to work woll; and twenty yeas later, the previone armanement was ablated of iflowingexpertation when the pice had
 for some time mevely changed the price at which exportation misht fersin, ecomedly conarsins it. After the bustanation, the policy of inereasing the duties on importation, for the partention of agriculture and the lamben interost at bumbe hawims to lie ferecptible. it the same thme, the atiect "f that went on the condition of Sontand ami Fhoglant tuwards each othor forms a curinus illustratimu of such tiscal rembations. Prubr ther I'rutwomato. they wore ome comatry, with fre interemmmmank of trading brivileres. sonthand was merosines in Wealth muler this arrancenent; bat the comatrios werw separated hy the resturatim of tharles II.. amb fucane the same to buch "ther as furimu mations.

to the prolucer for what he exported, so that if the price in the foreirn market might not indnce lim to send corn alroad, the boment, in addition to that juice, might. For upwarls if a century, the numerous daretments in this department will be fomm to I stinces, of the incidence of the bonnty on the one hamb, anil of the impurt dnty on the other. In 1723, a pomment adjustment was sulposed to be reachal ly Burke's act, which removed the bonnty, and frohilited exportation when the price reached 4s., and allowed impertation at a nominal duty of Gol., at a price of 45 s . Afterwards, and especially during the ereat war of the French Revolution, it becaute nsual to profess that the chief object of this kimd of legislation was to have always a suffieient suplly of cran at home for our own wants, and to rendur us cutirdy inderement of foreigu nations for the find of the perple. It was maintainerl that the lumaty effecterl this mject, since its tendency was to promute the froduction of more grain than was necessary at home, and it thus suphied a granary to he drawn uron in case of famine. It was other. wisc, however, mantained. that the prohibiting, or, at all events. restrainines the introlnction of foreign grain, would give a much grater impulse to lome pronetion. Lenking at it from the agricnltural interest solely, this viow was well fommerl; for, as the temblency of Britain to be an inporting rather than an exporting combtry was increasing, the expertation, eren with the enconragement of the lumuty, was hkely to he small. It could not, however, escatu consideration, that to increase home proluction ly a messure on importation, was firtmally to agramalise the landel interest ly a pressure on the fow of the peopde. With these views, the price at which impurtation might hegin was raisonl in 1804, amd was a gatn rased in 1814. what the lomity was abamimed as worthless for its purposes. There had hema a temency to what is calley 'it sliding seale' in the duties on impertation. This arrangement was brought into systmatic sham liy the are of listh, ani sulse.
 what was comsiomel ly its supmenters a state of 1"utections.

Thronghont these varmas changes there were not wating writers and preakers who denomed the (. Amadou (q. v.) or soft leather: or the lardened cuticle may be sofiencl by the aphication of some alkaline lotion, and then scraped or filed away: or it inay be extracted, as before menticined. A lotion of soda or potash is often found very useful. The cuticle comporsing is soft corn should be clipped off with scissors, and a small riece of cottonwoul be placed between the toes, In all serions eases, application should be made to a respectable chiropordist.
C. alfect lurses as well as men. In the foot of the horse they occur in the angle between the bars and outer crust, aml consist in a bruise of the sensitive secreting sole. Two forms of feet are especially subject to them-those with deep narrow slanting heels, in which the sensitive sole beeomes squeezed between the donbled up crust and the shne; and wide flat feet which, by the senscless entting away of the bars and onter crust, allow the delicate interior parts to be pressed with all the furce of the animal's weight on the wayiching iron shoe. Sorm and blood are poured ont, whilst the secreting parts being weak and irritahle, produce a soft, scaly, unhealthy horn. C. eonstitute unsouminess ; cause a short, eareful, tripping gait; are the most frequent sonree of lameness amongsi radsters; ahound in bady-shom horses, especially those with the lind of fect alluded to; and usually oceur in the inside beels of the forcieet, these being more especially suljected to weight, and henco to pressure. The discolomed spot indicating the recent corn must le carefully ent into with a five drawing-kuife ; any semm or hood is thas allowed free vent. If the bruise bas been extensive, a poultice will hare the twoflll effect of allaying irritation, and relierins the sensitive parts by softening the harn ungiuhing hom. When the injury has been of some standing, and soft faulty hom is secreted, a drow of diluted nitric acid may be applich. On 110 account unst the hars or outer crust be removed; they are required for bearing weight, which may be further keit wh the imjured part hy the use of a har-shoe. In lorses suljeet to $C$, lieep the feet soft by dressing with tar and oil way suitable emollient; hare out the 6 every fortnight; use a shoe with a wide wed on the iusile quarter, and nailed only on the outsinte; and, if the sole is thin aud weak, empluy leather pails.
CORNSTONE, a peculiar-often mottled-limestme of the Ohl Fich Sandstone formation of Hereformshire, shripshire and South Wales.

Somm. Greategt lenoth in a straightine from Wel-
 from Welcomb to lame llaud, 16 milos. Area, 1330 sq. miles, of which seven- mishtis are arable, meadow, or pasture. The surface is irrenalier, with rap in aseant and deseents. A rid se of mogen, heak, moory hills, rising to the leight of from som to 1300 fome ren
 this ridge the country shanes, and the streans daw on each sile. "he hill vallegate longer aml wider on the south than an the anth wifle of this riblen and some of them are picturnspe with corn, woml, orelards, rivnlet, and mealows. The coasts are bohd and rocky, and indented with many hendiands and bays. The chicf indentations are l'lymouth Itarbour, Filmouth Itarbemr, me of the linest in Britain, and Monnt's Bay between Lizard Point aml Laul's Eud. Twenty-four miles off the latter point are the Sicilly lsles. On the north-west coast neenu shifting sands, often in hills seycral hundreal feet high. The chicf rivers are the Tamar, which runs 59 miles along the east border, 19 miles heing a tidal estnary, ending in the noble romistead of Plymonth Sound; the Fal, which runs 26 miles south, 10 miles beiner tidal, and ends in the fine harleour of Carriek Pinal, near Falmonth; and the Allar or Camel, 29 miles long, 8 being navigahle. Woods, mexlows, arable land, and 1.40 parish churches, are saill to have lieen snbmerged hetween Mount's Bay amd the Scilly Isles. Old ved samtstone, the 'Killas' of the miner, eovers above threefourths of C ., and is intersected by three large masses of gravito in the interior of the enunty, with one aromm Land's End, and by jumhyry veins and dikes, some being 50 or 80 fathoms thick, and alse ly limestome bods. The granite on the hills is often worn ly the weather into the form of prismatie, enlical, or spheroidal hooks, pilal in gigantie caims. These blocks sonnetimes form Laggine or Lagan Stones. Coppor and tin veins, generally lto 3 feet thick, hat rarying from the thickness of pare to 30 feet and of minnom depth, run theough the granite and sambintone, generally from east to west. Tin nlso necurs in the gravel; and leal, silver, cobnalt, and antionny veins in the sindstone. Lizard Print consists of mica-slate, with smamene reins, and chinastone; mal the comery aromm, of serpentine, homblonde, and diallage rueks. Chinatone, ar decomposed felspar of granito, is fomm near Limmeeston, and is a chef ingredient in ret ots and cmobless mande at the Staffordshim juttries. In $1856, \mathrm{C}$ had 135 copper, 144 tin, and 42 lear mince. $\because$ yiehls one-third of the couper and nine-tenths of the tin raisel in the british dsles. The great mining distriat extends from Darimoor, in Devon, tu Lanids lind, the veins and lohna, or hissures, chichly ocenrring in grauite, ow killas. Nearly all the ores of C are smelted in sonth Walus.

The climate is mill, especially in winter, lont damp, with almost daily rain. Snow racly lies above a fow days, Sonth-west winds preval for nine months in the $y$ car, and frmons gales are frequent. Sime plauts of the scoth of Enrope, as the myrtle, tomarisk, and lalat of Gilat, flomish in the open air: lont fruits do not ripen well. The smil is litht, grevelly, or slaty. The land is generally larren in the mining tracts, liut frositfol in the valloga and on the const. The chinf rman are harley, whent, wat, amid potatenes ; lnt hamest is genorally later than in the indand contica, Near Penzance, however, two crops of potatnes are got yearly. $\quad \therefore$ is far nowe a minins than an abricultural counts. The filcharl-fishery is wery profitalde, and employs a large number of p"ple from July to September. The only exports are mining produce and fish.

 it a
bassing of various enactments, by cempliance with which any society of persons may acquire for thenselves the character of a corporation. The particulars of these will be consitered under the title Jonst. Stock Comprines. A C. always receives a corporate name, hy which it cues and is sucm, ond it must posseas a common seat, the allixing of which is the only competent way of aftixing the signature of the connman. The majmity of the members of a C . are entitleal to act in its name, and may, by a bylan, even delegato-exocit in the case of municipal corporations-the prwer of acting in its mame to a certain mumber of its members. For the acts of the 1 ., none of its members are personally liable. A C. may holi lands-sulject to the statutes of Nortinain (il. y.)-and may be possessed, if a C. atgreresto of chattels; but a C. sole has not this 1rivilece, muless it fe the representative of a number of persons for whose benefit the chattels are heh. Lint no C. can be either a trastee-proper or an excentor.
Corpurations, whether aggregate or sole, are divided into ecelusiastical and liy, and the lay are subdivided into civil and elecmozynary. The ecolesiastical are such as are composed wholly of clergmen, in their ecolusiastical capacity, and are chitfy for the l $_{\text {morpose }}$ of holling ecclesiastian property. Civil corporatims include municipal corprations, the universities, tho colleges of phystians and surgeons, learned sodicties, ant many traling companies incorporated. Elemosynary corporations are for the administration of funds for charitable and pions purposes, such as hospitals, the colleges in universities, \&e. An inpmitut consequence of these distinctions, is the effect it has on the richt of risiting a C ., or exeredsing a leat surerintendence over its proceedings. The crown is the risitior of the archbishons, each arehhishop is that risitur of his suffragan bishops, and each bishop is the visitor of all the coelesiastical eorporations in his dincuse. Civil corporations have no visitor, but the Court of Queen's Bench is the anthority entitled to restrim and direct them. Elemosymary corporations are visited by the fommer and his heirs, or such persons as the fommer appointed to be visitors ; and in default of such persons, or of the fommer's heirs, the Court of Chancery acts as visitor. Huspitals, if of ecelesiastical nature, are, however, sulject to the visitation of the lishon.

A C. may lre dissolved ly the death of all its membura, or of such number as leaves not enough to mak: nuw clections in the way the charter reguires; lyy forfeiture of the charter, through breach of its conditims: by surrember of the charter; or by act if parlimumt. In all shell cases, the lamels of the $d$. ruset th their several domas, ame the debts due by or to the ( are extingislach,

## CORDSECANDLE. Sec Cdmble.

 Cambridge, was founden by bow wilds on fratemitics of townspemple-tha guil? of Compes Chriati, who haw their prayers at sit Ibnedict (lumech: and the guild of the hersest Virsin, who prayed at sit Mary's. These wre mited in l3n', and a suall college crectel hy them. Arohbishon barker adden largely to the endownomis of this collers, and beyneatsed to it his valuable manuscripts, mumest which are the only authentic mamescript eppes of the Thirty-nine Articles of the Clurch of Luglaml. There are 10 fellows, all of whom must take boly orders. There are numerons scholarships, some of considerable value, given to the students who must distinguish themselves at tha annual examinations. Among the cminent men of this college were IIngh Latiner, Archbishops Parker ami Temison, Fletcher the dranatist, and Gongh the antiquary.

CORPUS CHDISTA, Oxforl. This college was founded in 1506 loy lichari liox. Lishop of Winchester, muler a licence from Fing ITenry TllI. 'i'le statutes were issuct in 1517. The fundration consisted of 20 fellows and 20 scholars ; of whom the fellows were to be elected from the schulars, while the scholars were to be clected from ecrtain specified counties. Two prenkarities marked this foundation. First, the usual rules of life aud discipline were enfored with peculiar severity; and, second, the object of the cullege was expressly connectel with the studies of the are. Classical literature was for the tirst time ristinetly mentionct. The subjects of the lectures ware cojomet to be, not the old rontine of divinity and the two philosophies, hut divinity, hurmity, and Greek. Incessant industry in these pursuits wis ineuleated by the fommer, and the fellows were eren forbithen to acequt the proctorship, lest the arocations of that office should interfere with their Imorer duties. The object and the stringency of these regalations called forth the velebrated encomiom of Erasmos, that what Chlossus was to Thmles, whit the Mausnlemm was to Corin, that C. (?. Collewe would le to the kinglom of Great Britain. This pretiction has hardly lieen futfilled. The mbles of the fomber have been mandmally set aside by att. of parliament, by cnstom, and ly injunctioniz of the sisitur. Wi the three university lectureships contemplated by the foumder, one was never foundel at all, and the other two were mergel in the enllene fellowshing and tutorshigs. And, lastly, the college has sibfired greatly from the serere restrictions imposen by statute $u_{1}$ on the clectims to fellowships. In sirtue of the powers conferrel ly 17 and is Vict. e. 81 , important changes hase law effecter hy tho college working in harmany with the commissienters. Jouth fellows and scholars are now dected withont any restrictious as to place of bith. The followships are still 20 in mumber, value rather muse than ano a yoar. The intentions of the fonmeter remalines university lectureships are now carricel out by the professor of Latin being almittul an homeny tellow of Corpus, and receiving from its lermues is tutal sum of 2600 a jear. The scholampips are also 20 in number, tonable for five years and of the ammal value of $\pm 50$ : besides fou exhibitions of the same value, and tenable for the same periol. The election of fellows awd scholars takes flace in the week irvecding Palm Sunday in each year. There
wre sey bernees in the gift of this collem; and in the year 1 bib there were about tigo names in the callace booke.

 ath mupronr lutlery and tiknaca, are makked.

The thankless and monotonous business of a corrector or reader is more difficult than the minitiated would believe. It requires extensive and varied knowledge, accurate acduantance with the art of typography, and ibove all, a jeenliar sharpness of eye, which, withont losing the sense and connection of the whale, takes in at the same time each separate word aml letter. After the invention of printing, the $C$. of the $I$. was executed by the publisher himself, or at least was intrusted to men of ability and learning, and often men of name. Tohert stephen ( $1520-1559$ ), and Plantin (1.555-1589), lind recomse to publicity, bung out the snccessive shents of their puldications, and promised a reward to any one who would point out a typograhical reor. Some elitions of particular worlis are hold in ligh estimation from the care with which the press had lreen corrected. Amony the must famons are those that issued from the press of Alus Mamitins in Vemee, of which we may mention the works of Ietrareh (1514), corrected by Pietro Bemlio; Aristotle (I551-1553, 6 vils.), corrected ly the famons Greek scholar, J. I. Canotius; Lactantins (1515), aml Suetonius (1516), corrected by J. B. Egnatins; Plato (151:3), Athemens ( 1514 ), and Gregory Nazianzene (1516), comectul liy Narens Massurus. 'The first edition of llomer was printed hy Nerlius in Florence (1484, $\because$ vols.), corrected liy Demetr. Chalkondylas. Robert Stephen of Paris himsulf corrected the numerous works that issmed from lis press; and Erasmus had a great name as a comectur.

CORRE'GGIO, Antonio Allegisi, a celebrated Italian painter, called C. from the place of his linth, a small town near Dolena, now calleal Resgio. He was born in the gear 1193-1494, ant his father, a tradesman of some prolerty, had him carofully edncated, and instructedi in the rudiments of art, hy an uncle, Lorenzo Allemri, a printer of small nimat. Itas monch he avial to his teacher is mucortain. He was the first among the moderns who displayed that mace and gencral beaty and softness of effect, the combined excellemees of clesign and colonr with taste and expression, for which he is still umivalled. His chiaroseno is lurfeet. Almost lufore he had seen the great masters, he lecanme a master in a style all his own; and was the fommer, or rathor his imitators for him, of what is called ly some the Lombard, by others the limma selool uf bainting. On first bebluling, at Buluga, Raphael's glorions picture of Sit Cecilia. he is satid to have exclamed: "Anch' in sone pittore' (I, tuo, inn a painter). But this stary is dunhted.

boat, and grooved for the required cormgations. Small boats thus constructed require no internal braings, the requisite rigidity and strength being given entirely by the corrugations.

## CORRU'PT PE'RJURY. See Perjury.

CORRUPT PRACTICES ACT. The laws relating to bribery, treating, and undue influence at elections of members of parliament, were consolidated and amended by 17 and 15 Vict. e. 102 (10th August 1854), which was contioued and amended ly 21 and $2 \boldsymbol{2}$ Vict. e. $S T$ ( $\because 2$ August 1858). Both of these statutes were further contimued till 10 th August 1860 , hy 22 and 23 Tict. c. 48 ( 13 th August 1859 ) ; and till I0th August 1861, by 23 and 44 Vict. c. 99.
Additional legislation on this very tronhlesome subject has been attempted in almost every session of parliament. See Pallifashat.

## CORRU'PTION OF DLOOD. Sce Treason. <br> CORRUPTION OE JUDGES. See JUDGE.

CO'RSAC (Canis or Cimalopes Consore), an animal of the dogr family ( $C$ anidie), found in the deserts of Tartary and in India. In size, it resembles a small fox, but is more slemer in bouly and limbs: it las long and pointed ears, a lushy tail, and is of a reduish or yellowish colour ; the form of the head resembles that of the fux. It lives in large eommouities, burrows, prowls during the thy, and not during the night like foxes, and is believel to feed chiefly on birels and their eross, lut mot to object even to insect food. There are several Asiatic species closely allied to this.

CORSAIR (Ital. corso, a racc), a pirate or sea-robber, but generally limited in its application to the pirates who in fommer times sailed from Algiers, Tunis. Tripol, and the ports of Maroceo, and were the teror of morchantmen in the Mediterranean and the neighboming parts of the Atlantic Ocean.
$\mathrm{CO}^{\prime} \mathrm{RSICA}$, an island in the Mediteranean separated from the island of sarlinia by the strait of Bonifacio on the sonth, aud situated in lat. 41 $20^{\prime}-43^{\circ} \mathrm{N}$. , and long. $S^{\circ}: 50^{\prime}-9^{\circ} 30^{\prime} \mathrm{E}$. It forms the French department of Corse, and has an area of 3340 square miles, with a promation, in $155^{\circ}$, of 258,507 . The greater protion of the island is necupied by ranges of rugrosl mountains, the highost leing Donte Rotondo (ancient Mons Aumens), Dhbs feet high, and covered with perpothal snow. There are scveral rivers in the island, the larrest ut which, having their source in Nonte liotonde, are the 'Inrignano (ancient lihotamus) inml the Colo (ancient Tavola). They flow into the sea on the east const; the Golo is navigable for loats. Several small rivers, most of which are dry in summer, flow westwarl into the sea. The soil is generally fertile in the valleys, yieling all kinds of ecreals, and much wine is promucul. Olive, orange, fig, almond, and other fruit-trees flourish; fruit forming a consilerable item in the exports. lint C . is chielly colebrated on accomat of its marenificent forests wi oak, pinc, ehestmut, beech, larch, cork, \&c. Nany of the fines are upward of leo fect hneh, and are moln used for masts in the Freneh nuvy. The chestnot forests are partionlarly fine, fud the frut serves as an important irticle of foul fur the inhabitants. I'vickly-pear, abotus, myrthes ©e., ibound. Iron, leat, hlare manganese, antimony, mable, and grante of heatiful patility, are found (on the island. lat these somrees of wealth are nut
 fand and oncatsonally six horms, gants, and gigs are manasols, amb the waring of rattle is carrical on to a preat extent. Tumas, pilchad, and anchovy
abound along the coast. $C$. is vided moto the fire arrondissements of Ajaccio, Bastia, Calvi, Certe, ant Sartene. Ajaccio is the capital. The language spoken in C. is a corrupt Italian. The Corsicans are great inmorisatori; valour, love of freedom, and desire of revenge are their principal characteristics.

In early times $C$. was known as Cyrnos, although its native name is saitl by some historians to have been the same as that it now bears. As early as 564 e.c., a colony of Phoceans had founded a city on its east const. After successive changes of Cartha. gimirn, Roman, V'andal, Greek, and Cothie rulers, it came in the Sth c. into the hands of the Suracens, who held it until the beginaing of the 11th e., when it fell under the dominion of Pisa. It afterwards bassed to the Gemoese, who held it until 1755, When the Corsicans under General Panli male themselves in grat part independent. The Ireuch, to whom the Gonoese surrendered the clams they themselves conkl not maintain, captured it in 1768 ; since which time, with slight intermission, it has remainel in the possession of France.

CORSLET was the boty-covering of pikemen. The $C$. was made chiefly of leather, and was pistol. pronf.

CO'RSNED, or morsel of execration, was a piece of cheese or bread made use of in early times with a view to ascertain whether persons suspected of any crime were guilty or innocent. The C., according to Blackstone, "was consecrated with a form of exorcism, desiring of the Amighty that it might canse convulsions and paleness, and tiod no passage, if, the man was really guilty, but might turn to health and nourishment if he was innocent.' In this mode of divination, linley-bread appears to have hat the preference. It was one of the many forms of ordeal (y. v.).

CO'RSO (literally, comrse or romning) is an Italian word used to express mot only the racing of horses (without rithers), lut also the slow driving in procession of handsome equipages through the principal streets of a town, such as almost always takes place in Italy on festivals. This enstom has given a name to many strects in almost all tho larger towns of Ttaly. The lest known of these is the (: in Tome, which is the scone of the celcbratal diversions of the Carnival.

CORT, Cunskids, a famous Dutch engraver, was horn at 11 oom in 1838 . In $157^{\circ}$ he went to Venice, and was lospitally recerved there liy Titian. Being less of a painter than of an cngraver, he scems very soon to have been employed by the great Venctian colourist for the reproduction in eopper-plate of sume of his master-pueces; and it appears he did it so well, that he afterwarels engravel for 'Tintoretto amd onthr Venetian masters. 1. noxt settled at Romes, where he erected an engraving school, and had amony lis pupils Agass tino Couracei, and from this sehool sprither the most exechent ltalian and Venotian engravers. C.'s works hat in favomable influence on the graver's art in the Netherlands. He died at liome in 1508 . His engraviner, eonsidering his short life of 42 years, are very mumbrous, anomatine to mone than 150.

CO'R'LN is the name quen in Spain and lortugal to the assembly of representative's of the nation. As ane districe of Sbain after another was rucurard ly the (laristian prinees from the Abors, thers arose in ebela a corporation composed wf the diffureut "states' or ortars of the population, limiting the jower of thr prinese. From the union of several of thase turrotaris were formeal the two lealums linurilums of ('astile and Aramon, having voch ins (', representing the clergy, the nobility, ant the cities. In Aragn, the (. appointed a
judge: of justiria, whon dembed disputes latween the kior and his subjects, thel continall the royal pawer within constituthonal limits. In Castile the rights of the burghers were hose extensive than in Aragon, luat in buth states the king was chermonot on the Cortes. After the union of Castale and Aragon under Ferdinat and !abhella, the crown suceeeded in making itself less depordent on the (3, whose power and privilume were grabally enerwanhed upon, matil at has they were seldom assembled exeat to for homation or sametion an arrangement as to the sheerssion to the throne. Alter 1713 they din not ment till 178!, on the atceession of Charles IV. In 1809, the $\left(\begin{array}{l}\text {., as compured in }\end{array}\right.$ 1789, was assmbled ly the Jumta, and fromed a new constitution, calleal the Constitation of 1812, which, however, was sut aside at the restoration. Eudless attempts at resturation and modification of the Spanish C. have since been made, without any haypy result. See Spais.
'Ihe history of the Portnguesse C . is very similar to that of the Spanish. In 1826 , Ihm I Cedro pronulgated a new constitution after the mokel of the lireneh, calling the C. again into life, and abdicating at the same time in favour of lis daghter, Maria da Gloria. This constitution was set aside during the nsurpation of Dom Migucl, but was limally restored in IS42.

Coritles, Hervan, the daring eonquemo of Mexico, was lorn in 1455, at Melellin, a villige of Bistremadura, Spain. He was elucated for the law, but afterwards adopted the profession of arms; and in 151 l distinguished himself under ThernVelasquez in the expedition arginst Cuba. In lifs the conquest of Mexico was intrustel to him by Velasquez, who was then governor of Cuba; lut the latter had no sooner grauted him the commission than he wished to revoke it, fearful that his dashiner aml sagacious lientenant would deprive him of all the glory of the enterprise. U, however, mantainer his command in defiance of the governor. Never, perhaps, was an enterprise so reat undertaken with su little regard for its difficultius and dangers. I force of between 600 and 700 neth, only thirteen of whon were musketeers, with only ten fieh-pheces aud two or three smaller pieces of camm, were all the means at C.'s disposal to effect the conquest of the then extensive empire of Mexica, when, early in 1519 , be landed on its shores. Sailing up the river Tabasen, C. captured the town of that name, the prowess of the Spaninels oceasioniog great terror to the Tabascans, who made liberal presents to the white men, and rolunteered all the imformation abont Mexico in their power. Arrining olf the coast of San Juan de Ullon, C'. was here visited by some Mexican cluefs, with whom he entered into negotiation regarding a visit to Mon. tezuma, who then ruled with nearly absulnte swily over Mexico. Montezuma sent $C$. rich jresents, but objected to his visiting the capital. But C. hand rusolved upon seeing the emperor in his palace, and was not to be daunted by opposition. Having foumded the town of Vera Cruz, and lurnt his shipis, so that his troops could not return, and mnst therefore conquer or perish, C ., with a force reduced to 400 spaniards on foot anil 15 horse, lut with is considerable number of Indian followers, lent hime ly dissatisfied chiefs dependent on Montezuma, narchad upon the eapital. Overcoming the Tlascalans, a brawe peokle, on the way, who after became his firm allies, and taking fearful vengeance on the eity of Cholula, where, by Montezuma's orders, a treacherous attempt was made to massacre his troups, ( , on the Sth November 1519 reached the city of Mexico with his little bund, and was ueceived with great pomp ly the emperor in intson,

Thespaniad wore rerardal as thase descomants of the sum who, aremoling to a curront prophery, were to enme from the ast and sulwort the Aztee compire a travition that was worth a fromil many soldiers to loothe. An attack on C.'s colony at S'erat 'ruz ley onn of Whatezuma's fonerals, howerer, prowert the mortality of the spariands, and wond have beren the ruin of then lat for the decisiverness of "., who immediately soizert the vancom, and carrying hime the spmish puartor, forced him to surventer the whending cmatel and three other chivef, whom lee chused tolme hurnt in front of the palace, and ere lone compallal him formally to cerlo his empire to Span. One has mothimp but astonishment for this man, whose daring acts in the culuital city of the empire, containimg it is calonlated, 300,000 inhabitants, hiad nothise lant 400 Spaniards, and a few thousand ludiano, whem he Land recently conquered, to suppret them. Meanwhile Velis'fuez, emaced at Co's success. sent an army of abut 1000 mon , well provided with artil lery, to eompel his surventer. $\therefore$, unexiectedy usat and overpusered this force, and secured its allegriance. Lut in his absence the Nexieans Jrat? riscu in the capital, and C. was fimally driven out with much loss. During the disturbanec, Moutezuma, who was still kent a prisoner, apmearel on a terace with the view of pacifyine his poonds ; but he was wounded by a stone, an indignity aganst his kingly person which he tocks so much to hart that ho died in a few days. O. now retired to Tlasealia, to recruit lus fatigued and wounder men; and receiving reinforcements, he speedily sulijugatel all Anahuac to the east of the Mexican valley, and soon marched again on the city of Nexico, which he succeeded in eap,turing (Augnst 10, 162l) after a siege of fimur months coded hy a murderons assandt of two days. Famine bad assisted the Spuish arms, so that of the vast pojulation only about 40,000 remained when the ramiards entereil the city, which lay in ruins, "like some huge churchyard with the corpses disinterred and the tombstomes scattered about." Mexico was now completely suljugated, for though some attempts at recolt were afterwards made, they were som crushed liy $\because$, who had been nominated governor and caitainacneral of the cometry by Charles Y. 111.820 .1 returned to Spain, to meet sume calnmmies against him, and was received with ont distinction. On his return to Mexico in 15:30, lowever, he was divested of his civil rank. At his own expense he fitted out several expeditions, one of which discovered Califormia. In toto he came arain to reain, hut was coldly received at conurt, from which he soon retired, and died at seville, December 1547.
CORTO'NA, a town of C'intral It:dy", alout 50 miles south-enst of Florence. It is leantifnily sitnated amid vineyards un a bill rising from thie fertile valley of the Chiant, am? commaning a fince view of the lake of lerugia (ancient Thrasymene). The city is of fabmburs antiquity, older, it is sait, than Troy; and the 'velopwan walls, evected by" the Pelasgians-which in many parts remain mehanged - prove, if not a listory quite as all as tradition aftions, at all events one second in remuteness to few places in laly. It was one of the most Jowerful of the twelve citics forming the Etruscan League. By the Comans, who setted a colony here about the time of Sulla, it was called (ionthins. Aiter many vieissitudes durnen the midule ares, the town heeane subject to Florence in the lath century. Besides the walls, there are several objects if Etrnsean antiquity at Contoma. The molern town contains about $50(1)$ inhalitants. Among the principal buidings are the cathedrad, dating from the ltth wr llth e., with some fine paintings and mommonts.

Co'sulds, sumanad Imbiountostos, a merchant of Alexantria. who lived in the mildle of the Gith c . and attor havos travelled much. returned to Erypt. where he suent the evenime of his days in monastic rotirement. and wrote a "Chistian Thpography" in 12 vols, in the (ireck landore, containing much information about many countries, and particularly alnont India. An attempt to reconcile everythins to his notions of the meaninf of the bille has led him into many errors. The work (which, among oflor thinge. rivis the first account of the Momumentum Ahtelitenum, see Avole) has been celited by

Dontfaneon in the Jove Collectio Patrom Grrecorum, vol. ii. (Par. 1707). C. wrote also a description of the plants and animals of India, which was pablisherl by Thevenot in his Relations de Dieers loyages Curicur, vol. i. (Par. 1666).

COSMETICS (Gr. hosmen, I adorn) are chemieal prepratious employed for improving the appearance of the skin and hair. Several of the $\mathbf{C}$. in use are comparatively harmless, such as perfumed starch and chalk; whilst others, such as pearl white (the sub. mitrate of bismuth), are more or less prisonous, and langerous to use. At all times, the employment of $\therefore$ is not to be commended, as the minute particles tend to fill up and elog the yores of the slim, and prevent the free passage of gases and vapoms, which is so essential to the preservation of any animal organ in a thorongh state of health.

COSMO DE' MLEDICL. See Medul.
COSATO'GONY (Cr. Rosmos, the universe; gone, generation) is the (so-called) scievee of the formation of the unverse. It is thus distinguished from cosmography, which is the science of the parts of the unverse as we behold it (a science embodied in the work of Humboldt, entitled Cosmos), and from cosmology, which reasous on the actual and permanent state of the world as it is. Geogony, which confines itself to the formation of the earth, and speenlative geology, are but suldivisions of cosmogony.

Cosmogonists proper may be disided into two classes-the Theistical, and the Pantheistieal. According to Theistic C., the world of matter aud order spand at onee into existence at the Omnific fiat. I'Le chief speculations from this point of siew, have of late leen regarding the dute, if the expression may be used, of the world's formation, and, looking to the facts of geology and astronomy, the precise condition of the cosmos when evoked; how much, in short, of the evolution, smee the date, is attriIntable to the operation of secondary causes. The l'antheists hok the universe, on the other land, to he the very body and being of Deity, and as such to have been from all cterwity. Goil is all things, anl all things are Cod-a conclusion reached from pure d priori reasoning, ancl that seems to excludt all further imquiry.

Men of science, in modern times, stopping short of an actual C. or genesis of the worlh, have pasheat their inquiries into the onder of devolopment of its present state, which they, or at least some of them, aver to have taken ilace from the lirst by the divine power exereised in the manacr of naturnl law. They assume the existence of mattor amd with thom there is no proper begimang of things, lont an eternal roum, under fixed liws of growth anll deay.

In ernmogonical speedations, heat, air, atmas with rotatory motions, manbers-all in turn lave hat the honom of leing recognised as the fombtain innl canses of things. Latterly, there has lnon a fanlumey to dymamical hypotheses, not only of tha formation of our own rotatiug globe, but of our system, and of all similar systems in space of Hhess, the chicef is that of laphace, fommed on ubservation of the motual ralations of the planets, their common direction in rotation and revolntion, thein creneral confurmity to ome plane, \&c. taken in monnetion with such facta as the rines of Katurn and thue fumblumental unity of the asteminds. J'hus arosi
 asulamert fion Sin Wilham Ilerschel's observations on tho achath: of which, fowervor, the stiseoveriog by 1.and liens is tuseope in at yrat measure eleprised if. F'ollonviner up this view it a formation uf thw yhameloy natural cithos, there have becn spectations
as to the commencement and progress of organie life upon them by similar means: these are to be found in the Philosophie Zoologique of Lamarck; the I estiges of the Natural IVistory of Cration; and in the work of Charles Darwin ou the Origin of Species by a Principle of Natural Selection; all of which involve great differences of view among themselves, though all meeting in one point-an assimilation of the processes of ercation to the ordinary natural course of things presumed to be arranged and condueted loy the Deity.

COSMORA'MA (Gr. hosmos, the world, and orro, to see), an exhibition of views from different parts of the world. See Diorama

## CO'SMOS. See Cosmogony.

COSNE, a town of France, in the department of Nievre, about 30 miles north-north-west of Nevers. It is situated on the right bank of the Loire, bere crosser by a suspension-bridge, is generally well built, and has iron forces ind manufactures of eutlery. Pop. (1872)502t.

CO'SSACKS (Russ. Ǩescecks), a race, in appearance, mamers, amd language, very mueh rescmbling the linssians. The name Kasack is of Tumkish or Tartar origin, signifying, in the Turkish language, a robber, in the Tartar, a light-armed warior.

## Cossack of the Don-Ofticer in Full Dress.

The C. are not, howerer, akin to the Turks or Tintars, but are lescombants of the ancient linssians of Nusugoros ank Kiew, to whom the necessity of mantaning is constant resistance to encmies has given a peculian warlike eharacter. There are two princijal lmanches of the Cossack familythe Malo-linssian C. or (\% of Tittle Russia, and the Don Cossacks. The formere are the more wilh and rume. To this bandel beloner the satoorong A., who dwell beside the water-falla or lemogi of the Dorieper, abd are the most unserupulous robines of all. Tho Inon $C$ inhalit the great steprers to the north of the sea of Azof ame of (Gusasiat. COSSIMBAZA'R, in Emglish, 'ossim's morket, stamds on the Blamiathi, which is the tirst ar morst
 Wellinghe to form the Howely, It is in lat. "2f" $h^{\prime \prime}$ N., and long. $85^{\circ} 18^{\prime}$ V, , lreing 120 mileos by lamel to the north-east of Colentla. It contains aliont 5000 inlabitants. C. was at ofor time famous for its silk-manufacture, which, however, law, in it freat moasure, yiclued to British competition. It is now worthy of notice chielly as the river-port of Monshedabad, of which it is, in fact, a sulmots. Such is its prominence in this respect, that it uften gives its own name to the strean on which it is situated.

## (O'SSUS. See Goat Noth.

COS'I'A, Is.lac bi, an eminent poet and relimions writer, was born at Amsterdam, January 14, 1798. Ilis parents were Portuguese Jews, whol latl settled in E[ollamel. The first asjuration of his poetical wains having been shewn hy his Ihehrew teacher to Bilderdijk, the latter expressed himself favourally regarding it, and a warn and lasting friundslip sprang up between him and Costa. In his twentioth year, C. acpuired the legrec of Ur at law ; and shortly after, having embraced Christianity, was baptized. This subjectet him to considerable pursecution, which, however, subsided as lis genus gradually gained recognition. The most intoresting of his writings to the British pullic are probalily his translation of Iyron's 'rein, his Levael and the Gentiles, and IFarmony of the Gospuls, the last twe of which have been translated into English. As a public lecturer, C. specially excelled. His little of Nieuwpoort, the last of hiss pomens, is one of his master-pieces. He died, April 2s, 1860, and, though privately buried, was bonnured with a concourse mexampled, except when De linytor anl Van Speyk were interred with public pomp in the same Siellue Kerk at Austerdam.

COSTA. Sir Miculaed, a very popular musician and composer, was born at Naples, February 1810. As he early shewed a deciden talent for music, he wias sent to the conservatoive in his natise city for d dnation, where he greatly distinguishei hamself. In 18:3, his fime, thonth he was then fut 18 , laving reached England, he was invited to take part in the Birmingham Musieal Festival, an invitation he complion with; and he was so well feceived in this comntry that he resolvel to settle in it. In 1830, he was appointerl conbuctor of the inusic in the Italian Opera, lomion, an office which, in 1817, he resigned for a similar one in the Foy:ul Italian Oprera, Covent rarden. IL is great work, the matorio Eli, modnced at the Birmmerham festival of 1855 , rised hinn to a high rank as a composer. Netemen, first sung in Birmingham in IS64, was a wreat sneeess. De was knighted by Queen Victoria in 1869 ; and, in the same year, receiven the lioyal order of Frederick from the king of Wurtemberg, in tuken of his Majesty's ammation of Lili, per fonned under the composer's direction at Stuttirart the previons November. ('. is the anthor of several latlets, and of some operas, the most sucuessful of which was Don Carlos.

CO'sT Rl'CA, the most south-easterly state of Central America. It occupies the entre brealth from sea to sea lictween Nicaragua on the one side and New diranada on the other, stretehing in N. lat. from $\mathrm{S}^{\circ}$ to $10^{\circ} 40^{\prime}$, and in W . long. from $83^{\prime}$ to $85^{\circ}$. With an ared of 16,250 square miles, it is estimated
 is feremerally monntianms more so on the merth-

 Enclish anthoress, was born in 1815. Her tirst Proluetion, at least of any unte, was sjucimens of the liully l'utiy of Franer ( 15 Sis), but it was as is tonrist sle qained the rreatest popnlarity. 'The works in which she deserilues lar trabelline-tripas are -at Summer amomist the buoters ant! the Jiness (1s40): A lilypinmege to Autrome, Nc. (1st2); Buthe and the 'Pyproces (1S41); The' fialls, Latits,

 (1816). Niss U. also wrote seferal nowels, the mincinal of which are The Gum-mother (1511), aml
 shar publishad a work of a professenly histurical character, entitled Mrmoirs of Mom, the Yountl Duchess of liwrounly: and in IS.js, another of the same kint, A mene of Britton! Miss ('. wrotr in a very pleasant and phicturesque style. Sle died in 1570.

CO'STER, LAELENS JANSZOON, accorling to the Dutch, the inventor of printing, was born it llaar. lem about the yeir 1:3\%. The time of the invention ascriber to him nust have fall n letween the years 1420 anl 1429. C. at first worked in secret, because, be being a sacristan, his art, it laown, whal have lrought fim into unpleasant cullision with the manuscript-writing clergy, whose lwnhuctions he tried to mitate, even to the alolreviations: thus his name did not ippear on the profuctions of his press. As custom incrascel, C . hal to take apprentices; and whe of them, a fiermam, Johann, makine use uf the confusion weasioned ly ens death in 14:39, is sxill to have purloined the greatry prart of his master's tyles amd matricis, and to have Hed to Masence, where he loronght the himben art to light. This Johana was jrobably Tollanm tribnstleisch, a member of the rintonberir family: Sum, at least. is tlow listory of the invention of printing as siven by the jutch, and which thry support hy the testimony uf Inaliamms Junins, the histrmian of the States of Hulland. DJorenver, a celelarated printer of Colngue. Lhrich Zell, rleceased alout the year 1500 , is sail to have declared ' that Gutenhere his moster, bat derived lis art from Hulland, aftew the model of a Imontws printed there. Now, a Donatus of $\because$ s time still exists ; it was probluced in 1740 by Johannes Enschedé. also a celebrated printer of Haarlem; aml wo somer had his discovery been mate known in Necramas Dpigines Tiplouriphicer, than framants of the same work appeared in such puantities, that no one conld any mure arer that this early monument of imperfect
typography. mostly printed from indisputably Dutch types, had been struck off from Gntenberg's press. Gutenberg's works, even now, are models of impression: those ascribed to C ., at first printel on one side only, are the first proofs of a begimer. Then, all the characters of the ollest Duteh printed books resemble the Dutch handwriting of the first half of the 15th c., a proof of the independent nature of the attempts towards imitating manuscripts for sale. Other evidences are given hy the Dutch that C. was the true inventor of printing; the most eminent adrocates of his claims heing Neerman, koning, Scheltema, Van Westreenen van Tiellandt, De Tries, Schinkel, Noordzick, Ebert, Loon de Lalworle, Paul Lacroix, and Bernart. In the town-honse of Harrlen, the typograplical remants of the productions ascribed to $C$ are preserval. Sice Pristivg; and for the Cierman acconnt of the invention, Gctenberg. As for C... his momory still is beld in due bonour by the town of his birtly; the site of his house is still puinted ont with pride; and, hesides the monment of 1523 , in the 11 iardem Wood, a hronze statne of him, by lioyer, was erected with national sulemnity in the market-place of Ilarrlem, July 16, 15006 .

Co'sTMARY (i. e., cost, or aromatic plant, of the Tirgin Mary), un ALE-CUS"l (Batsamita minnive), a peremial flant of the natural order "ompositer" sub-onder Chrymbifioup, a matise of the sonth of Europe, which has long heen cultivated in gardens in Britain for the agreable fragrance of the leaves. The routhaves are owate, of a grayish colow, on long forotstalks: the stem is a-3 fect high: the stem-leaves have no footstalk: the small litarls of flowers are in loose carymbs, deep yellow. The leaves were formerly lint into ale and negus, and are still waed ly the Frencla in salads.

COSTEOMA, or kOSTHOMA, a tomm of European Thussia, capital of the movince of the same name, is situated at the contluence of the Cinstruma with the Triga, in lat. $55^{\circ} 45^{\prime}$ No. long. $41^{\circ} 1 \underline{2} \mathrm{E}$. C ., which is said to have heen limilt in the lothe e . is surrounded by earthen-walls, now comverted into walks. The town is diviled into three portions: one, contaning the eathedral and many landsome structures, excupies a lecight; and luetween it and the lower town, which is built alons the hank of the Tolga, and composed of houses of woul and stone, interspersed with eardens, is a third quarter. consisting entirely of strme honses. C. is a thriving dace, with manufactures of linen, leather. suap, and Jrusilun blue. It has also a bell-fomuldy. 1'op., 23,453.
cos'r's, the technical name in Enginh law for the expuses incurred in legal procedines. As a gencral rule, the C . of the suceessful party are pait biy the loser, lut the rule is subject to jmpurtant exceptions. 1. A party suing or defemding in formet peuprios (tu entitle lim to which privilege he must swar that he is not worth e5), does not pry ( though he is entited to receive them if successiul. $\because$ In actions in which the plantiff recowers damages under tor., he is, in certain cases, not entitled tor 's, maloss the prowiding julder cortities that he ought the hasw them: and in all ,ther cases, he is not entitled to them, if the presinlins jublere certifies that ho mhat not to have them. :: A plantiff whomeght have hamont his action in the comaty court, is mat -ntithal to 16 if he sues in the highor courts, and remevers mot mare than din inertain actions, ur Sed in whers andess the judere who trixs the case protifies that it was proper tha action shand hase
 is anderssful in the main, aul therefore whition to the 'ernoral casts,' may le unsuceessful upon some 24
minor point, and therefore bomed to pay the O . which helong properly to it. 5. A party whe has tendered the amount recovered, and whi pays the sum into court, and pleads the tender, is not lonum to pay costs. 6. The payment of money into court in the course of an action relieves the party paying from C. of subserquent proceedings, if no greater amount he ultimately recoverad.
C. Fonnerly used to be given neither to nor against the crown. cither in its fiscal, pulnic, or private capacity; but ly 18 and 19 Vict. c. © 10 , and 23 and 24 Vict. c. 34 , the crown is now entitled t" C., and homid to $\mathrm{l}^{\text {ny }} \mathrm{C}$. in the sane way as a private suitor.
C. are taxed (i. e., the items allowed or disallowed) ly the ufficer of the court appointed for the pmose nuilur the name of the master. When so asecetained, they are, if in favour of the phaintiff, meluded in the amount for which judgment is given, if it be in his favour, and recovered as part of it. If they are in farmar of the defendant, they are recovered as a jubment in his favon' and any party may have, if har chooses, his own attorney's or solicitor's bill taxed by the same oflicer hofure paying it, or even after payment in certain eases.

In crimmal cases, the prosecntor"s C. may lo allowed by the julge, and in that case are paid nut of the county rates, the county being reinlursed by the 'l'reasury.

In Chancery suits, $C$ are, in the discretion of the court, given as a rencral rule to the successful party; lut when the suit was properly institutel. and was of the nature of an mhemistrative suit, C . are oftengiven out of the estate.
C. in hatlaml, are called lixpenses (d. r.). See also Aunthui wf the Cuert of Sessios.

COSTU'ME (1tal. costume; Fr. coustume, couthme, from Lat consu-tulo, use and wont) is another form of the word enstom, and, in its wider sense, signifies the extemal appearance which the life of a people presents at a particular epoch of jts history. In its narrower and more usual sense, C . signifies the customary modes of clothing and adornmy the person, in any particular age or country, In this sense, it inclules the prevailing fashion in jewellery, weapons, and uther personal equipments. In both senses, $C$. plays an important part in art. The poet, more especially the marrative or epic poet, is compelled to resin't to jt as a means of carrying his realer back into the age which he duscribes. Homer bas it constuntly in view in narrating the exploits of lisy herves. Amongst morem romance writers, Sir Walter seott has introxiucel the fashion of perhaps an exessive attention to mare external costume. but it is in art as presented to the eye, that $C^{C}$ : becomes indispensable, and the leose and gencral treatment of it which is promittel to the novelist w the puet, is forlidede to the painter, the sculptor, and the player. Huw sorely the soulptor has been trial ly the wigs amd hreedns of fumer semerations, and by the tromsers, straps, hats, wat other monstrosities of our wan, no ane who has stem a statue of Prederich the (ireat, of of the late sir lionert l'ow, ean requipe to la toll. Two means, not of solving hat of ascapinge from the difliculty, hawe hean largly resortal to: the one consists in depmetimb from the mostern dress altogethor, and rebertine th the ancint tura: the nthor, in wrapping up tho fisure, as far at pussiblo, in a cloak. The tirst of these dumess is nother more nor less than a deliburath vidation of what artists regarl as the laws of $(\because .$, by which thry conceive thomselves
 priate acessoring; the seromi, hesides being very "ften "pron in a besser degree to the same objection, has the further disuratantage of acomplisling its

$$
\ldots
$$

object very imperfectly: The wisust cemrs for the artist is bublly ter face the dulioulty. That he maty do so successfully, many of the worls. of lianch.
 testify. In the earlier stanes of art, an execsaivi attention to C. may gemally he romarkerl, which thongh useless, and smotinus hartind to artistic effect, has proved of the greatest value for historical parposes. "lhe tembency of the barlier showh of art to exhihit C , with an allumbinman medary and minutoness, is exhihitml in the works of the older masters, both of the Italian an:l fromin schools. Buen during the jurioul of the highest blom of latian art, the molieval enstom of representing historical, saered, ind ihab charators in the (: peenliar to the time and chantry of the artist, was in a seat measure allicred to. From l'ind Veronese, Tintureto, and others, we may learn the asped which a mariage-feast in the pance of a Venctian or Fherentime grandec presented, lint can form little conception of the $C$. of that simpler festivity in Cama of Galilee, or of that supper still less sen. suons in Jernsalem, whirh they profess to represent. In the hanis of the greater masters, these scenes assumed an ideal character; and in the works of Michael Angelo, Leonardo, and liaphael, O., thongh still exlibitings something of a native trace, rises into the highest regions of portical conception. The effort to aroid amehronisus by a previous listorical and antiguarian stuly if the suliject, belongs, indeed, almost entirely to the molern European schools of art, aut many painters of late have devoted themselvis to it to such an extent as almost to forget that it is a means, and not an end, exeept, inded, to a mere painter of clothes.

But it is in theatrical representations that attention to C., particularly in its narrower sense, hecones most imperative. When the stage, in Western Europe, commenced in the religinhs mysterics of the millle ages, the dress adoptell was that which belongel to the time and the cmuntry. Tu this bress some fantastical object was generally added to judicate the character intemind to lee persmatel. In this position matters remained during the thine of Shatspeare in England, of Lope de Vega and Cahderon in Spain, and evel of Corneille, Racinc, and Moliare in France. Whetler a Greek, a Foman, an Assyrian, or a Turk was representerl, the ordinary court-iress of the thne was adhered to, and the tumbun, the helmet, or the laurel-cown was placed on the top of the pruke or the pownered hair. In like manner, shepherdesses and peasantgirls had their bair dressed in turrets like feudal keeps, and long white kidhoves which covered their hands and arms to the elbow. Towards the middle of the 1 Sth $c$, a refom was introtuced by the famous actress Clairon, who acted Blectra without hairpowder; but Talma was the dirst who introduced a C: really true to history. Garrick followed in the footsteps of the sreat Frenchman, though both he and Siddons, durine their carlier period, personated the characters of Shakspeare in what has been called the rocteo ( - --knedirecehes and periwiss. Schlegel's Hemman, and Goethe's diots ron Borlichingen, were the tirst plays which were given in Cermany with historical costume.

COSTUS' or COSTUS ARASICUS, an aromatic much esteemed by the ancients, and comerning which great dombt long existed, hut which sems now to le ascertained to be the dried rout of Aucklentise rostus, a plant of the natural order Compronith, submonder ("marocephalor. It is a uative of the moist open slopes surrounding the valley of Cashmere. The roots are there burned as incense. 'l'hey have a strong aromatic pungent odour, and
are (mplayed in protecting bales of shawls fron motls:
 day, was lum at 'liwetn, Devonshire, in 1741. II. carly doplayed a tant: for painting ame leteron his Ith and $24 t$ year carred ofl dive premimms from the sisinty of Arta As a minaturopanter, Lu was partionarly famons, and gathol abl the patronage of the mobility of his tines. His works, in fact, wor the fashim, and all attompts at risalry wore usidecs. Many of then wore distmenishat his groat dolicusy, "moctmes, and hanty, and has Trawinss were mot unworthy of a phace insida some. of the wh masters. 'The immonse sums of memey which he made anahed hion to live in the monet smoptanes style, and to vive musial partios has
 so far surpassinge all other (fforts of the kind that they firmed a foature of the time, and wore attembled hy all the rank, fashiom, and intellert of that day: ( $\therefore$ diod in 1821 .
COT, on shiphorrl, is an officer's hammone. It is male of catwas, in the form of a kime of chest, six fent longe, two iml a half wide, and whe donp. This recoptacle is kept out at full longth by mana of a square woolen frame. The lail or mattress is placed within the $1 .:$ and the arrangement is more comfortahle than that of a sailur's hammok; but looth are alike slumg from the rafters or beams of the calin.

COTE-WOR, a deproment in thr east of France, furmed of part of the old prowince of liurandy, in
 an area of 33.50 spuare miles, with a fuphlation, in 1872, of :3t, 510 . 'The surface is in general rather Whated, and is traversel loy a chain of hills fomming the connecting-link lween the cownos anil tho Vosges. A prortion of that range, callem the Cotern' (OH (* ghlden sleque), reccives its name (which it gives to the d"partment) on aceomet of the execllinge of than wines prodnced on its declivities. Soe beacex ov Wines. A great part of the derartment is comer with forests. The valleys and ldains are fertile, and there is gool pasture-lame; but agriculture is in a backwad state. ( is watered ly the some, which rises in the borth-west, and by several of its atthents; hy the same. and hy the Arroux, a tributary of the Lovie. By means of eanals, 1. has watercommomication with the derman Decan, Mediterranean, English Chamel, anl lay of Biseay. The climate is tomprate; iron, cost, marbi, gypsum, aml lithographic stones are fouml, the dirst in large guantities. ( 1 . is divided into fine arrondissements; viz., Perame, Clatillon-sur-stine, Tijom, and semur, with Dijon for al cajotal.

COTES, Fogers, a sutntifie man of mach pros mise, was born at Burbice, nem Leqcester, July Jo, 1682; lut death cut him off on the hind-rail to, fame ere he had attainoll his thirty-fourth year: mot. however, before he had loft sime marks of his presence in the history of exact scimen. Ile was the author of the anmiable preface explaining the Newtomian philosphy, and answerins olecotinns to gravitation, which was profixel to the secoud. edition (171:3) of Newton's Prinainan. Varims mathematical papers of his own, temling meatly to the deselopment of logarithms, were Fuldishem aiter lis death. Shate as his hite was, his influence on mathematios is charly traceahn. Il was hell in the highest estern ley the scholars and scientitic men of his time; and sir Isate Newton is asserted to have said of hom that, hal he liven, 'we should have known sumethinge?

COTES-DU-NOlin (northern coasts), a lepartment in the north-west of France, forming a jart
of Fretasme, ami bumuld N. hy the English Channel, in which are several small islands beloneing to C. ; lat. $45^{\circ} 3^{\prime}-45^{\circ}$ 56' N., long. $1^{\circ} 53^{\prime}-3^{\circ} 3 \mathbf{n}^{\prime}$ W.; area, 28 th square miles; pop. Ges, o! 0 . The Armoric lifls, called also the Montagnes Noires, and the Menez Monntains, cross the department from cast to west. They have a hreadtly of about sixteen miles, and consist chiefly of granite and clay-slate. These formations give a rule aud broken aspeet to the coasts. The chief rivers, which are short but navigable, are the Fance, Gouct. Tricux, (Gucr, and Arguenon. The southern district has the advantage of a considerable length of the canal between Nantes and Brest. Though a great portion of the south anl the higher plains is occupied by heath and woods, there are, here and there, fertile spots; and in the north the inthence of the meighomring sea is favourable to vegetation. The cultivation of dax and hemp, with pasturage and iron-mining, cuphly employment in the mountainous districts; while in the sheltered valleys and on the coastlevels all European kinds of grain, with pears and apples and other froits, are produced ; and maize is cultivated, but does not always ripen. The coasts are well supplied with various kints of fish. The department is divided into the tive arrontissements of St Brieuc, Diman, Louléac, Lanmion, and Gningamp. The chief town is st Brienc.
CO'TESWOLD, or COTSWOLD HILLS, a rante of oolitic and lias hills, ruming through the middle of Gloucestershire, from Chipping Comden in the north-cast, by Chelteaham and Strond, to near Eath in the south-west. They are parallel to the Aron and Severn, and separate the Lower Severn from the sources of the Thames. They are 54 miles long, and in some parts 8 hroad, and coser 312 square miles, with an average height of 500 to 600 fect. The highest pwints are Cleare Hill, 1134 fect, and Broadway Hill, 1056 feet. The soil is a claycy loam, with gravel and stonc-brash. The surface is generally lare, with little wool ; corn, turuips, and sanfoim are grown, and coarse-woolled shecp fed on them. At strond, they are crussed liy the Thames and Serern Canal, and the Swindon Junction Failway.

## Cothu'rnus. See Beskin.

COT1CE, or COST, in Meraldry, one of the diminutives of the Bem ( $(\mathrm{I} . \mathrm{i}$ ). The (: is the fourth part of the benul, and is usually bone in couples, with a head between them.

COTICE, the French tem to express that an rscutcheon is divided hendways intur many equal parts. See Benny. In Fuglish herahry, anything that is acenster, sided, or accompmied loy another heraldic object, is satid to be cotiscd.

COTILLON (Fr. under-petticoat), the namp uf at hisk dance, of French origin, performal ly wight pursurs. It was common in sootland at the and of the last and beginnine of the present eantury, whe timmerg fashouable till surneretod hy the quatrille, Wheh is only a wew variety of the cotillon.
"OTIN゙ (A (Ampulis), a menms of hirls of the fanily i mpelider, or ("hattones (o. r.), havino a ratlur fecble and dompedroft hith, and foediar lusth on insects amd frits. They are natiwes of Gouth Amorica, imhait moist placess and arr remarlathe for the sphomber of the phomare of tha
 purphe are then their provalent colones. During 1f1. rust of the yoar, they are clothend in a tam. kray in laram.
("D'olel'XI, one of the loftiest of the active
 Combllera of that colossal range, its lat. and
240
long being $0^{\circ} 41^{\prime} \mathrm{S}$, and $78^{\circ} 4 \cdot 2^{\prime} \mathrm{W}$. The sumnit is 18,587 reet almove the sea, or about 9800 Inet above the tahle-land of Quito. The upper part, a perfect cone of 4400 feet in height, is entirely covered with snow, excepting that the inmediate verge of the crater looks more like a bare jarapet of rock. Humboldt, who attempted to ascend the mountain in 1802, found great difficulty in reaching even the sunwy zone, and prononnced the top itself to be absolutely inaccessible. The scorise cover the neighbouring valleys; the flames have been known to rise 3000 feet; and the roaring of the emption has sometimes been heard at the distance of 200 leagues.

COTRONE, a town of Italy, in the provinee of Calabria Cltra 1I., built on a point of land projecting into the sea, in lat. $39^{\circ} 7^{\prime}$ N., long. $17^{\circ} 10^{\prime}$ E. It is almost surronnded by the Esaro (ancient .Usarus), which here has its embonchure. C. is very strongly fortifed. Its streets are chark and narrow, and its port of no importance; pop. ahont 5000 . C., hawerer, possesses interest from its antiquity and its historic associations. It owes its origin to a colony of Acheans, as far back as 710 b.c., its ancient name being Croton or Crotowa. It soon became prosperous, wealthy, and powerful. Its walls measured 12 miles in circumference, and the territory over which it extended its sway was considerable. Its inhabitauts were celebrated for athletic exercises, and they carried off most of the prizes at the Olympic games. Nilo was its most renowned athlete. Pythagoras settled here about the midalle of the Gth c. E.c. ; but the influence which, by means of a league of his formation, he exercised, became olnoxions to the citizens, and he was expelled. Abont 510 B.C., C. Sent furth an army of above 100,000 men to fight the Sybarites, who were utterly defeated, and their city destroyed. The war with Pyrhms completely ruined the importance of C ., and in the Qd c . P. C. it had sumk so low, that a colony of Romans hiul to be sent to recruit its well-nigh cxhausted bopulation. It never afterwards recovered its prosperity. Some ruins belonging to the old, exist in the vicinity of the motern city, the most important of which is a Doric column, part of a once mamificent temple to Juno, on Cape Colonne or Nau (the Nans of the ancients).

COTTA, the name of a very old German prob-lishiuc-house, established at Tibbingen in 1649, and still one uf the most tlourishing in Germany. The family eame from Italy about the beginnind of the 1.atl century. lts monst prominent member was Ioh. Frimb., Freiher von C., a meritorious theologian of the listle century.

Johi Frimal., Fremifer von C., one of the most eminent pmblishers that (ammany eror produces), was burn at Stutteart, "30th April 1764. He was ralucatod at the miversity of Thibingen, and for some time pratisma as an adrocate. In 1787, he motertom to embluet the family lwok-trade at 'Thithenen: and in 170.5 established the Honen, a literary joumal, mulor tho aitorship of Schiller. In the same sar, he commened two larger periodicals, the l'ultisolnen Ammith, and the delorhacher her Pantande: 111794 , lue extablished the Allgewrine Z, itung-still phlishod at Augshorg-the dhamerle find limerh, and inher wors of a similar kiml. 1: now lugre (") puldish the works of the illustrinss inemera anthors of cermany, such as

## COTTON.

portion if the mainland of Georgia, Sonth Carolina, and Flomita; the saline ingredients of the soil and atmosphere being indispersable elements of the growth. The plant bears a yellow Hower, and the seeds are small, black, and tuite smooth, and the wool is easily separated therefrom: but when sown far inland, away from the saline influences of the coast, the seets increase in size, and become covered with iunumerable short hairs. A large perentage of the erops raism in Alabama, Lumsina, Mississipli. Texas, \&e., are also varictics of this species, though, owing to clinatic influences, the wool is shorter in staple, and less casily separated from the sceds than sia Island. The commercial value of the latter lind varies from 1 s. to 3s. per lb., rare suecinens sometimes realising $5 s$ or 6 . per 16 . The letter hescripions of Egyptim cotton belmg to G. Burbulense, and loring ls, to 2. $6 \%$. per lb . in the Liverpool market. The shortstiple varicties, known as New Orteans, Molile, \&c., sell at from 5 el. to $10 d_{\text {. }}$ extra pualities sometimes bringing 1 s. per pount. G: herbucteme is found in India, China, Egylt, \&c. The nincipal commercial varieties are thone known as sumat, Malras, and short-stapled Egyptian. It is a small shonbly 1月ant, bears a yellow flower, the seeds are covered with short grayish flown, and the staple produced, though not long, is sery fine. Its price varius from $3^{2} d$ to $9 d$. per 13. A variety is cultivatal in the United States, and the C. known as nankeen is thought to belong to this species. G. herbucorm. can be profitably cultivated in colder comntrics than any other species of C. plant. The third spreies is a native of south America, and the green seed ' C. of the United States appears to le a varicty. The stem reaches 10 to 15 feet in height, the flowers are yellow, and the capules contain eingt on ten back secds firmly attached tugether in a cone-like mass. The wool is long and strongstapled, and in value stamb next in order to bea Island and lomerstapheal Eesphtian. Natanham, lahia, and Maceio are varieties which sell in Liverpool at from sd. to $1 s, \mathbf{Q} d$. per 16 . G. cerburetem is fomed in India, China, \&e., and, as its name inpurts, is a large tree-like plant. It bears a red fhwer, and prodnces a fine yellowish-white wonl. Varie ties of it lave bern long cultivateal in the Triten States, and with the requisite soil and climate, are sain to produce a wool somewhat resembling: sea Istan!.
$\therefore$ Culticulion.-The phant is a vary dodieate orgnism, and requires a peenliar soil and climate for its due development. The methoul of cultisation is much the same in the various conntries where the filire is grown; lut the most perfect system is that which Ghtains in the United Statos of America. Athough the pant is not, strictly spaking, an ammal, it is cound more protitable to destroy the shomb, after the crep is gathered, and sow new seed every year. The preparation of the land takes phace dmin! the winter-monthes. After the gromed has lnem thowonghly phoyhed, and as soon als all symptoms of frost lave disarpeared, the soil is baid of into rows varying in width from 3 to I fere, accondine to the situation and grality of the soil. The sectl is then sown alone the ecotre of the loals in a straight

date is about June 5. As a meneral rule, C. is a dry-weathur plant. For plonghing, the flanter requires just sulficient rain to give the sul at moist and slongy texture. Dming the early stages of its growth, the crop flourishes best with io warm steamy sort of weather, with an nceasional shower until blonming; too mach rain beine prodnctive of weeds and wond at the expense of wook, whilst a severe drought promees a stuntel plant, [orced into tou carly maturity, and resultine in a small and lightstapled crup. A great deal, however, depends apon the positron of the plantation; lands situated in hilly (12 apland districts obviously requiring more moisture than those lying in the phains and river-bottoms. From the date of hlownin to the close of the pieking suason, warm dry weather is essential. Picking generally commences in August, occasionally in July, and continnes until the occurrence of frostabout the end of October or beginning of November - puits a stop to the further growth of the plant. All the available hanris of the plantation, young and wd, are called into full cmployment dume the lar. vest. 'The C'. is gathered'intolaskets or bags suspended from the shoulders of the prickers, and when the crop, has leen secured, it is spread ont and dried, and then separatel from the seeds. The latter process was furmerly performed by hame-a tedious operation, ly which one haml conld clean only a pound or so a day; lant since the invention of the saw-gin, by Eli Whitney in 1793, the process of clemmes has been both yanid and rffectual. This nachine is composed of a hopper, having one side formed of strong parallel wires phreed so close together as torexlule the passare of the seeds from within. The wool is draggel through the apertures by means of circnlar-saws attached to a large roller, and made to revolve between the wires, the seeds sinking to the bottom of the hopper. This process is adopted only in cleaning the short-stapled varicties of American C., the seeds of which adhere so firmly to the wool as to require a considerable amount of force to separate them. The sea Island varicty is cleaned ly being passed throngh two small rollers, which revolve in opposite directions, and easily throw off the hard smooth seeds. In India, though the saw and other machine-gins have been intronfuced in some districts, the wool is mostly cleaned by means of the primitive roller. Both descriptions of gins are used in Egypt and Brazil. The C. cleaned by the rolleregin, being uwinjured thevely in staple, realises the butter price; but the a leterimation cansel by the saw-gin is eompensated for by the greatly incrased quantity Cleaned ; the latiou tuming coit fom or five times as much work as the fimer in an equal space of time, and threly comsidualuly rembing the expense of cleanine. The introxluction of improved gins has very laredy mereasen the proluction of cotton in Egypan amail during the past ten years.
3. Prentuction and Instribution.-The ollest (.. producing conntry is Invin. in which empire the plant has luen grown abl manfactured from time immermorial. Eirly montion is alsn made of it in the :mands of beypt, and it is beleved to have ab ligh antipuity an all parts of Africa. In the Weat wh world, it was fombl hy colmabus, hut was not so extonsivaly rultivated as in the Last ; thergh durnes the pact halferentury the eulture there has ontathitum, both in quantity and guality, the monluce il the ohd Wiand.  to $15.50,79,510,40311 \mathrm{~s}$; and 18.51 to 1 sin, $23,017,310$ lhs. In $15^{2}(9)$, whly 24 pomds-weight of ( 6 -yanu, and $14,191,177$ yaris of gomb, were exporten to lndia; lont in 15\%: the figures, including shipments via shez, were $34,000,000 \mathrm{lbs}$, yam, and $1,2-0,000,000$ yards of calico! It is impussille to ascertan the total amount of 4 raised in ludia; font we mary obseres that the filme is grown all wer the prome snla, and is used for all the purposes fir which we employ C., flax, wool, and mostly hemp. The fol lowins theures will give the reater some idea of the extent of the export lranch of the trale: they also shew the marvellons cxpansion incilental to the American war.

Prin to the American war, the suply of C. from Intia was merely supplementary to that from the United States. With a small erop in America, prices advanced, aud the inports from India increascl; but with a larse American yich, pices drognet, and the recejpts from India foll off; the surplus produce findins its way to China, of being consumed in the interior. This is in a measure still the case (as is shewn in the above figures), though not to the same extent as formorly. Ly the introlnction of impoved methods of cultivation, cleaning, \&c., the quality of Indian (C. has been greatly improved; and it is now much more generally used them it was twelve or fiftecn years ago.

Brath.-The C. trade of Drazil has untergone a most extraoninary olevelopment during the past ten years, owing to the impetus given tu the cultivation of the plant durine the American war, and to the general aloption of the saw-rin in flace of the roller-gin: this sulatitution if the American gin has produced quantity at tinc expense of quality; lat the demands of line spmuers have lewn met by mereased supplies from Erym. The subifind statemont shews the progress made hy this banch of lirazitian trade:

Ollor romentio.-In addition to the districts just 1 nssed in review, $C$ is grown in numerous other conntries. Wuring the infancy of the trade mer sumners received 7.5 per cent of the C. consuncd from the West Indies, and the remainder from the Levant; with the great expansion of the culture in America, the sulphies from the West Indies aralually fell off, the planters tinding it more prubitable to occury their labour and canital in the production of sugar and other growths. Larly in the present contury, the imports into Gieat Britain from the West indies averaced 80,000 hales per anmem; lut ly lsas the arrivals had dwindled to only binm hales of which only about 200 bales were from the West Indies, propeny so called. Indar the stimulus if the high $1^{\text {rrices }}$ which ruled dring the C. famine, the suphlies from nuscel. lameons sourees-that is, from all comtries except the Uniterl States, East Indies, Drazil, and Egynt -rose from diow liales in 1858, and !3500 in 1560, to 23,000 in 1803 , and 131,000 in 1865 . With the decline in prices, the import fell to 100,000 in 1865 . In 1s72, however, the figures reached 166.000 bates; hat the inerease was from Pem and uther comatries, and not from the West ludies proper. The developmunt of the cultivation in Peru is one of the most inturestines facts in the recent history of the $C$. trade. Twelve years aso, Peruvian cotton was almust unkmon in the Liverpool market; in 1864, thu impurts reached 25.000 bales; and in $15 \%$, nuraly 103,000 lakes. The mugh-staphed varieties rank withe lirazils, while the lons-stapled sorts vie with Amwean seal lslame, and the hest descriptions of luyphtian.

1. 'onsmmption.-One rematks monder this head will he condincel to biewne and the I nited states of America. An immense phantity of $(\therefore$. is consumed ammally in lutla, Chinit, ind Africa, but there are no means of asectaninge well an appoximation of thre cmames so usell. There are 11 spmaing and woving mills in lamlay, containing 401,004 spimelles, and $42+1$ lomens; and there are 8 mills in other tuwn of the presibney. 'These,'

 In 1862 , the arrivals fell to laz millions, owins to the storprose of mundiss from Amorica. In libio, the conshmption was estimatel at "t? millions; hat the war cat down the figures to 160 millions in 18.9 , and Jis. millome in 14.1. 1118 18, there was a mise to lat millims, These latter tivures are exchorin of
 mathing as milliun for lrauce, as she stoud hefore
the war, acainst afomillinns in 1869 . The mmber of cotton spimilles in France is abont $5,200,000$. In Alsace there are abont $1,700,000$.
D. finm. - The averace import of ( 1 . into Belfium in $18: 96-1840$, was about 39,500 lales: in 1-45-1850, 56,600 hates; in 1856-1860, 16,000 bales ; in 1570, 91,000 bales ; aml in 1572, 14さ.100 \}rales. In the last-namerl year, 75,000 liales were consmed ; part of the remander was forwarded to Germany, switzerlam, or Alsace, ane part was ahled to stoek. The nmmer of spindes in belginm is variously estimated at from 650,000 to 800,006 .

Suntarlume. - The trade of this comfeleration has flourished consilurably. In 1833, its consumption was about $6,000,0100 \mathrm{lhs}:$ in 18 t 3 , about $\mathbf{2 2}, 0100,000$ $11 s$; in 1859 , about $25,000,000 \mathrm{lbs}$; in 1522 , alout $50,010,000 \mathrm{lbs}$. The first spinning machine was set up at Zarich in 1507. In 1506 , the namber of spindles was 300,000 ; in $1830,400,000$; in 1835 , 650,010 ; in $1840,750,000$; in $1840,850,000$; in 1850, 950,000; in 1860, $1,350,010$; and at the present time, about $2,010,000$. Prion to the FrancoI'russian war, the swiss spinners received the bulk uf their raw material viat France, but now they are supplided mainly through Hobland and Germany. The manufactured products of Switzerland are well likel, and compete successfally with those of England in the various continental markets.

Hollund. - The C . trade of Lolland is chiclly a transit one. The imports in 1572 reached 268,000 Jales, ami the deliveries, 202,000 bales, hat rinly alout 27,000 loales were retainel for consumption, the remainder passing to Gemmy, Alsace, and switzerland. Fiftecn years aro the average deliveries were only about 100,000 bales. The number of spinilles in llolland is ahout 230, , mo.

The Zollowin.-.Under this heal are included the Farions pulitical divisions of Cemany. The several states of the mion have mate considerable progress in the production of U . falsrics. The C . is received chithy through the ports of Hamburg and lemen, lut a considerable quantity is also receivel rid Holland and lelgim, while a farther portion is receivel into South Cermany frem Trieste. The aserage imports into Hanhurg, Bremen. Amsterdan, and Rotterdam, in the five years emked with 1540 , reached 100,000 lates; in the tive years conded with 185.5, they areraded 23,000 bales: in the thre years ended with 150 , they averagel 600,000 bales. This deliveries in the last-named period, lowever, did mot exced 65s,000 bales-the lablance bione retained in stoek. The mamber of spimples ia demmany in 1816 was ahont 815,000 ; in $1858,2,000,000$; anil in $157:, 3,000,000$, besides $1,700,100$ in 11 sa e : making a total of $4,716,000$. The Cermans onnsume nearly the whole of their now produce, and are busilhs larse hayers of Linglish yarns and gomes. "the lealing seat of the mamfacture after Alsene is raxomy; than follow Liaviria, I'russia, Bialen, Wirtemberss \&e.

Anstris.-In the C. trate, Anstria has made the lost prugress of :my comantry on the continumt. In 1sid, there were in all Austria, ineludine lambarly and Tenire, about $1,533,000$ spindes; while in $157^{2}$ (inclading tha 1 talion provinces for the prose of - muparison) there were only $1,500,000$-in increase of only ${ }^{2} 11^{\prime \prime \prime}$ cent. in 15 years. The mannfuetmers sessim norly the whole of their raw material rial bunate. The deliveries from that port averiend abmat sognt balos in the five yours onded with
 thre gears matal with $18: 2$. The $\therefore$ trade of Trinsth has increased considerally sinee the "penime of the "w\% 'inal, by which means the spinners of
 drent wommanation with Andia, Formerly atare"
ruantity of 6 was annually exprted from Liver1 min to Trieste, but the success of 21 . Lesse 1 's' enterprise has antirely destroyed this branch of trade.

Ituly.-The statistical materials relating to this part of the emtinent are very seanty. The imports into frenor and Naples in 1551 amounted to about 31,000 bales; in 1860 , they reached 94,000 , but a gool portion of this was firwarded to Switzerland and ither places. In 1570 , the import was only 4,000 bales ; in 1571 , the figures reached 02,000 ; in 18,2, fell to 67,000 . The most reliable anthorities estimate the number of spindles in Italy as $\overline{0}(0,000$, caynabe of consuming about 65,000 bales C. per annum. The East India C. formenly imported from liverpol is now received ria Suez.

Spein.-The C trade of Spain is the oldest in Europe, but until recently has made the slowest progress of any. During the past twenty years, however, things have greatly improved. In 1850, the annual consumption was only about 50,000 bales; in 1860, it reached 106,000 ; in $1570,152,000$; and in $187^{\circ}$ 186,000. There are in Spain about 1,400,000 spindles, caprable of using abont 352,000 bales of 370 lins. each.
Iucssit.- The C. mannfacture of this empire is of comparatively recent origin. The imports of raw C. in 1824-150 (averace of three years) were only $2,700,000$ lbs.; in 1833-1835, they reached 6, $200,000 \mathrm{lbs}$; in 1845-1817, $28,000,000 \mathrm{lbs}$; in $1853-1855,55,000,000 \mathrm{lbs}$; in $1555-1860$, $51,1000,000 \mathrm{ll} \mathrm{s}$. : and in $1869-1570,100,000,000 \mathrm{lbs} .$, besides a considerable quantity from Bokhara, say from $15,000,000$ to $20,000,000 \mathrm{lbs}$. This inmense increase in the consmmption of raw C . has ennsiderably curtailed the demand for English yarn. In 18:3s, we expritel 19,311.5\% lis. yarn to liussia, but in 1865 , only $1,700,010 \mathrm{lbs}$; and in 1892 , about $3,000,000 \mathrm{lbs}$. The munber of spindes in liussia is estimated at $2,000,000$, eapble of using $120,000,000$ lis. of cotton. Excepit in times of depressed trade, the mills work night and day, each mill having two sets of hands.
Seredin, de-There are in Swoden and Norway alout 300, ,060 spindles. The cuarser sorts of yarn are produced, ant the amual consumption of 1 : is alrout $18,000,1001 \mathrm{lh}$, or 48,150 bales of 370 lhs . each. The C . is imported partly from Liverpool, and partly direct from the United States,

IThith Stutho-The first C-mill built in the Inited States was in 1791; the second, in 1795; the third, in 1803; the fourth, in 180t; followed ly dhen mare during the next three years. In 1510, there were 81,0100 spindles ; in 18:1, $1,246,503$ spiniles ; in 1550, $3,13: 3,693$; in $1560,5,035,998$; in 1868, $6,6011,0100$; wnd in $15 \% 2,7.690,600$. In 1831, The consumption of C . ammunter to 182,000 hales;

In the healing art, C. and the cloth aud wodding made from it are used for wraping up and kecpung wam, and of late much more than formerly for binding up, hums and wombs. A prejndice formerly prevailed against the use of C., as irritating to womds; but exprience lias slewn this ophinion to be unfomitel, and $a$ is now used in many hosjutals quite as freely as linen.

Cotton Manumeture.- $1 t$ has alrealy been remarked that the molurn system of $($. manufacture dates no further lack than abont $\mathbf{1 7 0 0}$. Trior to the mechanical inventions of Hargreaves, Arkwricht. ('rompton, ancl Carturight, the arta of spinniner and wavines were entirely iomestic, and the instrmments of manipulation mach the same as those which hal been in use in the East for centuries hefore by means of the ancient distaff and spindle, or the more recent spiminewheel, ouly me threal at a time was producel, and the process, as may be imagined, was
telions, and not very remuncrative; besides which, only a very inferion yarn was the result; fur whilst a thlerable threwl conde be spun from thax, the proluce of $C$ : was soft, weak, ani uneven, amb in
 with ham, woullen, of wosterl fin the wor' (or Longitintinal yarn). -1tugether, in the mildhe of the 1 th en, ithe machinery for spmane was moch more inporfect than that for weavime and the weavers of the time were often at a stand for want of yarn tis

This state of things hat lone oecupicul the attentinn of the thinking furtion of the spinners, but withont any pratial result until the invention of the 'jemy? by llarmeares, alout 106. liy this machine. cinht threads at a time could be spun against the one of the spming-whecl. Harereaves was much abosed ly the popmace of his native town and neinhboumool, who feared that the in cention
would leprive them of all umployment ; the machine was destroved, amb the insentur compelted tu leave his hirthpace. Genius, howercr, bltimately trimmplel, and the 'spiming-jenny' was patenterl at Nuttingham in 150. The year previously, Ark: wright hal patented his 'water-frame,' or "throstle,' for spiming by rullers, ly means of which a stronger and much firmer yarn was proluced. It was absut this perion that falrics composer entirely of $C$. werc woven for the first time, the 'jemy' supplyines the with, and the 'throstle' the $a^{\prime \prime m}{ }^{\prime}$. A few years later, Mr Crompion bronst out a new piece of mechanism, which he styled the 'male-jemy,' from its combining the principles of both Iharsreaves ant Arkwrights patents; hat it had an alvantage wer both, insumeh as it protuced a much finer yarn than cither. The 'mule" came into fall play in or atnout 1750, which is the periol assigned for the birthe of the muslin trade. There was now no boncer a scarcity of yarw; the fear was, that there wond be two much, for it was clear that the hant-loon weavers of the time cond not keep up, with the improved spinnins machinery. But the invention of the 'power-loom, l, y br Cartwright, in ITSe, set aside all moulets in this respect: the question now was, whether a sufficient guantity of raw C . could be ohtainal in order to keep pace with the requirements of the rising manufature. West Inelia C., which in 1784 averaged 1 s. 67 . per lis, ruse to 2s. in 1785 ;
 were male to olitam increased surplies from India; but the invention of the saw-gin in America brought the repuired succonr from an unexpected quarter. It was only ly means of this machine that the production of the short-stalual $\therefore$ of the Initend States conld be namle at all remmerative, The expont of land-cleaned $C$. in 1791 was only
 year after the ammarace of the sin-riz, 1791-the experts rase to 1,601,700 lhes ; in 1705, to 6,20,0,300 llos. ; and in 1800 to 17.789 .5183 dis.

But to return. 'The first 'muke-jemy' containeil about thirty spimdles, which, insteal of being stationary, as in the 'jemn' ame 'throstle, wern placed on a carriage, which was moved outwarts, in order, whilst twisting, to increase the tinemess of the threal, an? inwarls again, to wind the Jarn on the spindles. This rendired the constantatemance of a spimer to wheel the carriage latkraris and forwards; but subsequent impuovements have some so far as to probuce what is callone the sidf-actines muld, two or three of which only winuire the assist-
 pace it is to piece any withe thrimbs whin may Treak harius spimang. Monles of this censtraction are made with as many as 1000 or 2000 spinilles, srometimes more; and with the sulf-antor, as mow improvel, a single thean has luen problecel metsur-
 weingine bat oup pount!

A worl in two on the proerses preliminary to
 varions prolucing conntries, paelicel "ither in lows
ar sunare bakes. On arrival at the mill, the C . first enters the wiring-mom. where it is surten, an il the varions pualities, which are often contamed in a simgle purclase, laid out in layers of equal extent, one over the other, mindrodelon close together. In this manner, two descriptions of $C$ are sometimes placel in me mixing. Wher surat, for instance, is scavee and dear, and sbort-stapled low American plentiful an cheap, spinners of what are calleal coase mumbers invariably use a mixture of both gromths; the same of other kints, proviled there is an approach to equality in length of fibre. C. of lifferent shales of colour are also sometimes spun together, in miler to proluce a particular yarn. A "nantity of this limes, as it is called, is then raked down from the ton to the loatom of the sile, is pertion of each layer heiug thas secured. This is carried t.1 the semtelin! ov rillowing machine, by means of which the 6 is cleansed from all impurities, such as samb, seets, leaf, \&e. The cleaned C. is then taken to the spormoling-mothine, tbrough which it passes, and is then wound, in a fleecy state, uron a large vomble raller, to be transforren to the codidid-mochine. The latter machine is bronght into reguisition for the purpose of itrawing ont the filores of the $\mathbf{C}$. into parallel layers, so as tu facilitate the twisting of them together. Origimally, this process was performed ly banl. The first improvemeat was made hey Lewis Panl in 17 ts , and the next ly Ifargreaves in 1760. Arkwricht and sulsernent spimucrs have perfected the machine. The C. was formerly cleaned by baul. The slime is next passel through the dramingframe, which removes all inequalities, and reduces the hanels to one umiform thickness. Here also several of the slivers are joined toycther (eallerl flouthinf), so as to fomm (one continnous cord, which is still further lonethenem and increasel in fincuess liy the rurint-muctime, Whence it passes on to lomins rearly for spmany. Undar the heads Srmang and Weavina, will be fomd a full description of the wanins processes above luricfly flanced at. Other bromelies of the subject are treated of under Cilico-peinting; Calembering ; Dyence, de.

The finer tinhts of yarm are sjom from Sea Island and lons-stapled Eyyptian, and from them are
 the hetter dasses of short-staplen American. come onr cambine, calions, shintinks, sleetings, \&e., and from the inferion qualities of American and surat are spun the enarse yans required for fostians and otherheary fabrics, Lombhice mandoths are sometmes half colton. From warp of $t^{\prime}$., and wetts of wool or wonstal, are formed varicties of OMems cloths, Comura, monswelines de lame, dimasks, se. There are abob folnios composed of sills and c, limen and C., alpaca amy Co, de.

Of the tutal amment of yarn produced, from mefiffin to come fourth is exprortol in its raw state: The following tizntes will sive tha realer an inden of the powress of our caport tralu in 6 . Jams and gnouls:

 L.. was fremently comsultell hyminiders of state on

 whe duem to have the wews of the sumety of Antignarnesom the matter, he wrote al BridiAbsictet
of the Question of Precedency betwen Enylund and Symin. Kims James, by whom he was marle a knisht, employed him to vindicate the conduct of his mother. Mary Queen of Scots, and alsu to examine whether the Leman Catholics, nu accoment of whom some alum was then felt in the natiom, should be imprisoned or put to rleath. O. twok the most hmmane riew of the matter. His intimacy with the Earl of Somerset Jed him to be suspecter of comlilicity in the leath of Sir Thomas Overlary, and in conserpuence he was imprisoned for alout five months. In 1029, a tract entitled A Project how a Prince muy metke himself un Absolute Tyrant, was obtained from his library, the tendency of which Was comsilared dangerous to the liberty of the state. His library was accordingly declared whit for Iurblic inspection, aml he himself was temed all use of it. Ilis heart being bound up in his library, he pinent amd died in less than two years after, on 6th May 1631.

The Cotroniln Lifrimy, which now forms so important a part of the British Mnsem, was, after the death of Sir Redert C's son and grandson, who angmented it consinterably, investel in trustees for the use of the pullic. In 1730, the library was removed to Ashbumham llonse. Westminster, where the royal collection was; and in the following year a tive necurred in the huses, in which about ]ly out of the 958115 . volumes of which the library consisted were reported as lost, bunned, or entirely spoiled; and 98 damaged so as to le defective' Fortumately, however, moler the care and intelligence of skilful lecepers, a great mumber of these injured volumes have leen restured, so that the library now consists of nearly 904 volmmes, of which, says Mr Edwards in his demoin of Librorios, nearly 200 are state papers of the hichest value. They inchule a vast series relating to the eliphmatic intercomso between Eugland and almost every state of Earon, extending from the reign of Elwarl Ill. tor that of James I.; ant of these thecuments, no small propution consists of the miginal letters of soverigns aud of statesmen. Even thuse 1 Repers which are not origiual have a high degree of authority, as loeing, for the most part, coeval transeripts.' The Cutonian Library was transferret to the british Musenm (1. v.) in "1757. In addition to tha MSM, the Cotonian collection comsists of miny valuable coins and antiquities.

## COTTON GRASS

COTTONWOO日, Ser Porlat.
CotrTUS, a qums of acanthopterygious fishes, of the Muilond 'herk limily or stelengt huder, having a laren depressed hawl, more of loss armet with spines or tulneclas, a tapering bomly destitute of scales, and two dursal fins. Shme of the species arw marine, others inhahit fresh wator. Of the latter, the liull-Irad ( $(1, v)$ ) is an example. The marine species are mastly fomm in urthern seas. A few weme on the shares of Britain, of which the must common are the sea Sompine (focnonius) amb the Father Lashow ( $f^{\prime}$. bubelis), lwoth of which are very often leit lig the rececling tide in rock-pooks, and amongst sea-weels. The greatest sizo to which they attain on the British consts is only about If inches, lut in more northerly seas, they beome much larger. 'They form a principal part of the foot of the (ireenlanders. Notwithstambine tlwir large gill-onneming, they live long ont of water.

COTURN1X. See Qual.
COTYLEABN (Gr. the name of a plant) or SELU-LOLSE, in Botany, a pincipal part of tha
 teganons plants are icolyledunous (1.v.) ; their secels or spores have no cutyledons. Thamrogamons phants are divided aceording to their seeds into Momoty-
 ous (I.v.), having two cotylahns. With the lattor are ranked some Comigote ronarkable for having more than two cotyledons, which form a surt if whorl. The eotyledons enclose the phamule in Gromule; and ingermination the y nually come abowe gromel as the tirst leaves (sond-insws) of the youm phant-the phmule in clicntylyhonous plants, appearing between them-and they heome at the same tiuse more leaf-hke; lut in sume plants, which have thick theshy cotyledons, they reminn umbergmucl. In either case, they contain it store of nourishnomt. by which the young plant is sustained on its tirst germination. Instances of cotyludens remaining amder gromal, may be scen in the commun nea aml bean; and instances of cotylolons emmini above gromnd, in the kidney-bean and scarlet-pmmer, phants of the same natural inder. Cotyledons are sometimes very thick, sometimes very thin and delicate; those of the same seed are gencrally equal. but mot always so; they are frequently unlivided. hat sometimes ent and lobed. The contylatom of duentyle donous pllants are often simply aplied face to face; when if the radicle is foldol along their whes, they are sail to be acombint; if it is folded on their back, they are incumbent. Stometimes the two cotyledons of a seed are condupicate, or laterally fulded; sometimes they are rectimete, or folded from apex to hase; sometimes comolnte, or laterally rollen up; sometines circinate, or spiratly molled up with the apen innmost. These terman

Couchaut: are of importance in descriptive botany, as characters of high vitue are ofters turnished by the seed.

COU'CHANT. In lhemaley, a beast lying down, with his íeal up, is couchant. If the hearl is domn, he is Doblint.
 Whent rimese, Jont rimess, tuidtene, and Symith in Gemith, at drast which, altlominh of the fam: whas with What, is chidly how to liritish firmure as at trind hanme wed. It is comman in mont parts of Finrone: and North Nhurven. It grnws tu a lowight of $1!-3$ foct, and lias twor mome spikes and that spoknlets, the siluon whicls is apdind ter the rachuis. It is peremisu, and its erapent rats rember it extromely mithent of extirpation: they are arofilly yathered hat of land umer cultivation, hat they nake the plant very us ful in fixinig Iwse samely suils, su a ${ }^{\text {as }}$ to form pastare It is mot, however, astemon a way mutritime grass. The ronts are swent and inneilagimma, and are collectad at Naptrs for fording lurses: they lave also beon trial and gromel into meal. to make lowal on tinues of sarateity. A kind of heer is male from them, and in some comutrins they are much nsed in elomestic modicine. They arm diapheretic and aprent.-The $l^{w}$ milar name squith or "位ch, is also given to some nther feremial grasses.

CoUCHING. See Cambiat.
 a conrt-peret helongins to the north of Frimee. who thomished probally in the latter pant of the $1 \because$ th contury. The lowe-songs ascribe? t,: him are distinguisheil above all smilar moduc: tions of the same eruch by the great warmeth of phasion displayed. They are addressed, of eourse, U a mistress, whose name, in accorlance with the fashion of the time, is mot mentionel. From their contents, we can gather little or mothing if the circumstances of $\because: s$ life. except that ho hal beonne a crusader, iond had seprated himseli very relactantly from the object of his arkration. It is sumpssad that he atemmpanim ldialipe Augnste and lichand Gime le lion to the Efy Lumb, prualily in the service of liaml sienu de Concy, with whon, inderl, he is oftom monfombed. Like Tristan and Isolde, C. and his niatress swon moame patterns of true pat mintunato lovers. As carly as the first half of the listh c., the Fiomen if Ampure gives a very prolixand increlilduacemat of buth. The hest ellition of the 'huncus.s the Ghêthleir de C. Was colited ly Prauc. Dlielzel (E'ais, $18.39)$.

## COU'GAR. See lema.

COUGIIIN ( C , ennwinered physiolncrically. comsists, lat, in a longe inspiratron which fills the 1 mon 3 to a sreater extent than hsual; 21 , in the chomee of the glattis, or narmo ripenime in the organ of voice (see Latrys), at the commonerment if the act of expiration ; ant, 31, in the sumben foscing "pron of the ghatis liy the vinlence of the expiratory movement. In this way, a hast of air is driven neward from the hons through the month. which carrius with it any fancees of imitation that may hate hern presut in the air-1asmans. C. may "ucor from irnitation in the lack of the thront. in the laryax, tracheas, on lrondiat tulns, and may be ewoital ly acril vunnre, by irritant gases. ar by artioles of fomb whe drink-such as erom a arop of water on a crumb of hecul-making their way inta the air-massans instual of into the pharynx, or by "xeessive on morhat sucretion from the walls of the air-tuhes, or even by the entrance of cold air, when
the lining molulume of the air-passages is abnorLually irritatle.
It is not very easy to explain to the nom-profesciunal reader how congh is produced. From the wedula ohmenata, or uppemost part of the slimal corl (Iying within the eavity of the cranimm), there is given off a very important nerve eallew, from its listribution to the lungs and stomach, the pneumoaratric nerve (q. v.), which eontains luith sensory and notor filaments. The seusory filaments are distributed to the mueous lining of the laryme, trachea, \&e. Any of the irritating sulustances already mentioned may proluce an impression upon these sensory filments which being conveged to the molulla oblongata, gives rise. through the motor filanents, to the transwission of motor impulses to the various museles which are ennceracd in the aet of eoughing. Other motor nerves, espeeinlly those sumpling the intercostal muscles and the diaphragm. co-operate powerfully with the motor filmonts of the ponemogastric.
The object of C . in the animal counomy is manestionably to guard against the damer of the entrance of mechanical and chemical irritants into the air-passares ; and accordingly the monoms memframe, especially of their uper part, is endowet with a inost exquisite sensibility which, when aronsed by imitation or by a state of disease. frovkes incessant enughing until the irritation \}e allayen ar removed. Congh is an execedingly common symptono of all diseases of the respitatom. Sue 1reunonia, Constmption, Bronchitis, ('atarhit, \&

Cough oeeurs amongst the lower animals moder similar conditions. From contimuel breathing of a close foul atmosphere, the bronchial mucous memfanne beemes unthly irritable, hence the prevalence of chrunic congh amongst the cows in nur overcrowdel town-datries. Ehronic eongh also oecurs in horses, hanally as a sequel to repeated attacks of bronchitis. It constitutes unsoumbers, is lest treat d ly requated duses of lielladomar ami camphor, hat often requires fom its entire remoral a run it grass.

COUlOMB, Cfartis Atotstuy man knom by his experiments on frietion, and his mention of an instrument - the Tursion Butunce (4. 5 .) - to measure the fonce of magnetie nml electrical attraction, was Tom at Angrouleme in 5730 , and in caly life onterect the engineors.  mall, which kives thwir framone bo the

Grass (Anthoxanthrm ordoratum) ; and the Faam or Faham leaves (Angrecum fragrens), much prized among the Asiatics for their ranilla-like seent; and is probably the cause of similar fragrance in many other plants. C. may be procured from Tonka beans by digestion in ether. It erystallises in small prisms, is colourless, has the smell of the bean, and is scareely soluble in cold water, but lissolves pretty easily in Loiling water. A beverage well known in Germany as Moy Drink, and made of wine and woolruff, derives its llavom from eoumarin.
$\mathrm{COU}^{\prime} \mathrm{NCIL}$, or $\mathrm{SI}^{+} \mathrm{NOD}$, is an assembly of ceelesiastieal dignitaries held for the purpose of regulatiog the diretrine or discipline of the church. As carly as the 21 e., chureh comneils were convened in which only one or two provinees took part, the hishops and prestigters linding themselves to earry ont the decisions arrived at in their own communities. These asscmblies were emmonly held in the elicif town or metropolis of the provinee, and the bishors of such capitals-who, after the 3 d c., bore the title of motropoliten-were wont to preside over the meetings, and to consiler questions of doctrine and discipline which had arisen within the territory. Orer these metropolitan conucils were established, at a later prime the prosincial syools, exercising authority user sereral united provinces, and timally, the national conncils. After the 4th c., when the Christian religion was established in the Roman empire, we real of womente", i. e., miversal couneils, si called becanse all the hishops of Christendom were insited or summoned by the emperor. In sume early syods, we find bishops, preslyters, and others, taking purt in the teliberations; but after the oprenin' of the 4th e., waly the bishons were ennvened. According to the thetrine of the Roman Catholic Church, the mpe alone, or, ley way of exception, in some cases the enllese of cardinals had the power of convening ecmmenical comots, which, in the Catholic view, remesent the universal ehureh muker the guilance of the Holy Ghost. Questions were determinell by the majurity of rotes, and the pope or his proxy presidel and confirmed the resulutions carriel iu the synod. In matters of fath, the Holy soriptures and the traditions of the church are the guile; while in lighter matters, human reasom and expediency were consulted. In the former, cemmenical councils are held to be infullible, lut in other matters of diseiphine, \&e, the latest symod deciles questions. The ruestion of the lopis sulurlination to the leerees of the wemenical commels was lons and warmly delated, lut the recent Vatican comencil may be silid to lave s.t the (phestion at rest. Twenty acomenical conmoils are reconnised in the loman catholic Chareln - 9 eastern and 11 western.

## COU'NSEL. Sec ADyocate nd Benimister:

COUNT (Fr. come? ; Lat. comes). In classical whiters, hown to the end of the 4 the. the meaniners attached to the worl comas were comparativoly fow and simpla. At first it signifiel morely an attmmant, :and differed from secilos chiefly in expressinor a less intinate and fanal relation to the persum aceonpanierl. Suotonius usis it for an attendant on a magistrate. A little later, in Horace's time, it was aphied te those yomeg men of fimily whom it land become custonary to senrl ont as pupils under the eye of the govermer of a province, or the commanter of an army. Very som the fashion of having sindilar attemants at bome was introduced, and Horace spralis of this necessity as oue of the miseries of a high losition. The empuror, of course, had many romifes in this sense; and to these, as be manlually beame the centre of power, he transierred the various oftices of his houselmad, and even of the state. Around lis person these comites formed a sort of council of state ${ }^{2}$ very much resembling tlat instituted by the first Xipulenn. The example of the emperors uf the west was followed by the emperors of the east, thounh at Byzantium the title attached less to tho othee than the the invidual. Nost of the titles of our own court oflicials are translations of those belonering to similar oflicers in the lnwer empire. The cumes sacrurum luryitionum was the grand almoner; the comes curine, the dranl-master of ceremonies; the comes cunturins, the graml-master of the wardrole; coms equoram arifionum, the grand equerry, ice. The comes maredram. or count of the mavehes, there can be little doult, was the orisinal of the ondryuis of later times. In Frimec, the C . of the palace (comas palutia nowiti) was the hishest dimitary in the state after the maire of the palace; and in the 1 ttl c. he had alroady acquired a rank apart from that of the other counts. He presidel in the court of the sovereign in his ahsonce, anl prossessel sovereign jumstiction. The lablit of instituting comots-palatine was adofted ly Sbain aml Euslami. Thuse counts, again, who, at a later period, as ruters of provinces, assmued something anmonchiner to suvereign Inwer, arronater to the mselves the rind of aprointing counts-palatine under them-e. os. the counts of ("hotres, of Chmpagne, of Jlois, Touluase, de.; amb the ancient lunses of Chartres anm of Blais contimen to chim in prpetuity the title oi C.-palatine as that of their elinest sums. Comatio of this sovereign class onten thein origin to the fueloness of the later Corlovinian limes. unter whom they rontrived gatually to comvert the provinces and towns which they had groverned as reyal ofleers into prineipalities hereditary in thein fanilies. It was then that the enwits came tu be known hy the names of theix connties, Since the great revolution, the tithe of ( ${ }^{\prime}$. in France has been purdy homorary, and has lreen used with a licence which has almost dequred it cyen of that charater. The title was never used in Englamd. thourh its Latin equivalent las always been the commmon translation for Earl ( $1 . v$ ), ank the wife if an earl, from a very early Werionl, lass been stylerl complow. Fur the history of the. "flice in licmmans, where it was of exceat impertance. sedirins.

COUNT AND RECKONING, the techmical name given in the law of Scotlaut to a form of process, which one party compels another to aceont julicially, and to pay the halance which may be fumd to lie due. In these actions a remit is usually made to an acconntant.

COU'Ster Approa' ${ }^{\prime}$ H, in Military Engineerin's, is a trench or passage, ent liy the defenders of a fortified post from some of the ontworks towaris the besiegers, and leading to a battery in a small work. Its ohject is to enable the defenders to foil the approaches of the beniegers, ly carrying the fight further away from the boly of the , face, and enatling the besieged to entilade the besiegers' hatteries and approaches.

COU'NTER-CHANGED, or CONTERCIHANGED, in Heraldry. When several metals and colours are intermixed, one being set against the other, they are said to be counter-changed.

## COUNTERFEIT. See Coming.

COUNTERFORT, in Fortifieation, is a mass of stone or lurichwork addet to the revetment of a rampart, in such a way as to form a luttress for resisting the pressure of the mass of earth. Counterforts occur at intervals of about 20 fect, and assist in preventing the earth from lushing down the revetment-wall into the diteh.

COUNTER-GUARD, is an outwork designed to defend the two faces of a bastion or ravelin from a direct fire, so as to retard a hreach being made. The C. consists of two lines of rampart parallel to the faces of the bastion or ravelin, and separated from then by a narrow ditch. The crest of the C . must be some three feet lower than that of the works it covers, in order nut to olstruct the defence. Lest the enemy should establish a battery ou the C., the terve-plein, or dat space lehind its parapet, is mate very narrow.

COUNTER-IRRITANTS, agents apmied to the skin so as to redelen (rubefacients), to vesicate (histers or vesicatories), or to proluce pustules, purulent issues, or erea slomghs of skin and of the subcutaneous textures. The mihler '". are mustar'] (see Caraflasm), turnentine applied on wam cloths, and spirit or acetic acid in lution. The stronger are blisters of cantharides ( $\mathrm{I} . \mathrm{v}$ ) or of ammonia; croton-oil ( $\mathrm{q} . \mathrm{v}$. ) or tartar emetic ( $\mathrm{I} . \mathrm{v}$. ), in vintment; setons, caustic or pea-issmes, and the moxa; and above all, the actual cautery (i. v.) or lot iron. Fone of the stronger $C$. shoula le newl without careful consideration and medical alvite; great mischan is often done by their eareless or impoper usc. U. relieve intermal pain, and tend to promole the alsurption of morbid effusions.

Amongst hurses, C. are much used fur strains ant diseases of the joints, hat shondit never be applind, as they ton often are, in recent cases, on whilst the frat is hot or inflamed. Canthariline preparations, or ointment of biniodide of mercury, are the mosi
convenient. For cows, use hot fonentations, fullowet by the smart infriction of mustard-paste; for dogs, soap-liniment, streagthened, if reguired, by ammonia or turpentime.
COUNTERMARCHINGG. See M.afming.
COU'NTERMINE, in Military Engineering, is a gallery or chamber excarated nuder the glacis on some other piart of a defence-work of a fortress. 3ts purpose is to foil a besieger. In a fortress on a large scale, there are envelope galleries, counterscap! galleries, listening galleries, galleries of communication, and other subterranean passages, umiter various parts of the ontworks, all for the purpose of assisting the defenders in discovering and irustrating plans laid ly the besiegers. Listening galleries are sometimes pushed forward even to the foot of the glacis. In such phaces, selected men put their ear to the gromd, and listen for the approach of the enemy, as denoted by the somal of tools used in driving a mine or gallery of attack. The sound of a pickaxe so employed can he heard through the gromed at a distance of 60 feet. As there are no openings above, these galleries canuot be driven beymd a certain listance, as the sappers would be stifted for want of air'. If a mine be driven to blow up the defence-works, a C. is driven to blow up the besiegers; and sometimes the two parties carry their works so far as to meet in the subterranean passages, and there fight. If there be only a thin wall of earth left letween them, they will fire pistols through bored holes, or drive in cartrilges or smokeballs. This terrible work is mostly carried on by sappers anct miners.

COUNTER-PASSANT, in Heraldry, when two heasts are passing each other the contrary way.

COU'NTERPOINT, in Mnsic, mems the setting of a harmony of one or more parts to a melody. In the early age of the science, notation was represented by mere points on the lines. The setting of parts to a meludy alrealy represented by a row of dots or ${ }^{\text {moints was thercfure ealle I punctum coutrapunctum. }}$ In this respect C . is nothing else but the uniting of various harmonions parts. In a more circumscribed sense, it is the art or manner of accompanying a given meloly with other parts. Simple $U$. is a nnsical combination where the meloly of the parts is nut mixed or changel, and may be either all in notes of the same length or of different lengths, as for example:

If the parts be constructed in regard to one another so that they can be chamed, or transponed over on mater each other, withont alteration in the movemont, or injury to the hamony, it is then called foulle C., for example:

As 11mblu 1 : cunsists of the changing or transe follows that there mast bu as many different
 250

## COUNTER-IROOF-COUNTY COURTS.

scale. We have, therefore, dombly $r$. of the as it is mure frem in mommont, and easier to actare as above, of the twolith, twhth, ninth, \&o. recosnist. The following annits of different transThat of the octave is, however, the must useful, persitions:

The first indication of enntrapmotal writing is to be ! frume in the loth c. by Adam de la Made, who recerved a genume artistic education in the Cortherlamis, but was far in alsance of his time, for his stylo of music was forlinden to be performend in the charch by a bull of the 1 wipe, who gave I'alestrina an order to replace it with a more simple music. The lest masters for C. lave heen kirulurger amb Allorechtsberger in former times, and in moleru times, Schneider, Hauptmann, and Dehn.

COUNTER-PROOF. An impressim which is obtained from a freshly-printed promi of an engraving, by laying it, before the ink is dry, mon phain paper, and passing it through the press. liy this neans the ink is transferred from the wet proof to the plain paper, and a reversed impression is ohtained, which is often of use in enalling the engraver to juige of the success of his work.

COUNTERSCARP, in Futification, is the vertical or nearly vertical side of the diteli mearest to the besiegers, and opposite to the scarp or escarp.

COUNTERSIGN, in military discipline or mawoures, is a worl exchanged between sentinels, inspectors of posts going their romils, or persons having business with the soldiers in camp or garrison. The C . in use at any partienar time is supposed to be known only to those immediately concerned, and is generally a simple wort.
COUNTERSHAN, the signature of a secretary, minister, or other sulbrdinate, to any writing signed ly the principal or superior, as a guarantee for its arthenticity.
COUNTER-TENOR, the highest adult male soice, and the lowest female voice.
COUFTER-VAIR, a heraldic fir: It differs from Teir by having its cups or bolls of the same tinctures placed hase against base, and point against point. The tinctures are $U_{R}$ and Azere.

COU'NTERVALLA'TION, in MilitaryEngineering, is a chain of posts constructed ly the besiegers of a fortified place; it completely suromads the phace at a certain distance, and is intended to prevent sorties of the besieged. The posts are generally small redoubts, either isolated or connected by a line of earthworks. It is only during very motracted sieges that comervallations are constructed. They bear a certain relation to Cirenmavallation ( $\mathrm{I}_{\mathrm{I}} \cdot \mathrm{v}$. ).
counties corporate. In England there are certain cities and towns, some having territory amucerl to them, some scarcely any, which possess the privilege of bing governed by their own sheritls: aml other manistrates altogether indenenfently of the connties in which they are situated. The Act 3 Geo. I. c. 5 , for regulating the office of sheriff, connmerates twelve cities and fise toms in this position. The cities are London, Chester, Bristin, Coventry, Canterbury, Exeter, Gloncester, Lichtieh,

Jincoln, Norwich, Wrorester, ant York. The towns are Kineston-up"n-Hull, Nottinghan, New-castle-npon-T'yne, lorrle, suthampton. lirm forming no part if the comities with which they wer. loeally comecterl, they lan no share in the cownty dections. Tu this extent twelve of the nunher are now inchumbl in their respective comines (2) Will. IV. c. 4.5, s. 17 , selmalule (i).

COUNTRY DANCE (F'r. contre-dunse, of which the Findish term is a currugtion), a lance in which as many couples can take part as there is space to accumnolate them; at the eammener ment, the gentlomen bing rangel on one sile, and the ladies on the other. In its ficure, the dancers are constantly changing places, lading one annther back and furward, up and dinm, bartiner and uniting again. The mmerons lifferent fisures, which give an interest to this dance, are gemerally designated with a particular name. The inusie is sumetimes in 星time, and sometimes in $\frac{8}{6}$ time, and the step is more smonth than springing. The C. (1). keeps its gromed in England notwithstanling the introluction of many fashionable new dances. See Daxcing.
$\mathrm{COU}^{\prime} \mathrm{NTY}$, a term equivalent to shire. Although of the same sisnitication, the terms are apmied on no unifom principle. In England and Scotlind, the shires are also called connties; but in Irelanl, tho term C. seems to le exclusively emplevent. Such, hikewise, appears to be the ease in the british colunics and United States. See Simpe.

COUNTY COURTS. The present C. (. . were established in 1846, prineipally for the purose of aflording a cheap and speely mond of recorering sman delots. The ohl C. C., kopt hy the sheriffs, were in most cases limited to the recowry ni sums not exceeding tos., and the exponse aml difficulty of enforcing moderate claims riten armumted to a denial of justice. There were a few local courts whose jurisuliction hal a rather wicker range. but in most eases there were great alnuses comecten with their manarement. The courts now take cognizance of all personal autions where the delte or danage
 'ejectment, or in which the title to any entoreal or imeorporeal hereditaments, or to any toll, fair, market, or franchisc, sball be in ruestion, or in which the valifity of any devise, Ineruest, or limita. tion, unker any will or settloment may be disputel, or any malicima prosecution, lifel, or slamber, criminal conversation, seduction, or lireach of promise of marriare.' liut all the actions lowe excluded, excent actions of eriminal conversation, may he triod in the C. ('. by consent of the parties concerned. By similar consent, actions for any greater amonnt than $\mathfrak{L}^{\circ} 9$ may be tried.

In lingland and Wales, there are $50 \Omega$ courts. divided into 59 circuits, and presided mer by 60 judges, the Liverpol circuit possessing two. The

## COUNTY RATE-COUPLES.

julles are arpointed ly the lord chancellor, or, where the whole district is in the duchy of Lancaster, he the chancellor of that duchy. Their salaries, owins to extender jurisdiction, are now nearly all etwon, ant have, with shoht variations, Teen mane maiform throuhbout the conntry. Jutges resignin from permanent disalility are allowed a retiring pension not exceerling two-thirds of their annual salary. Each cont has a resident registrar, except in a very few cases, where othials in the old county or local conrts claimed vested richts in the first appointments to C. C. offices. The registrars are appointel hy the judge, but the lod chancellor, or chancellor of the duchy of Lancaster, may remove them for misconduct. Their salaries rejend on the number of plaints enterel in thicir districts. In comorts under $60 \%$ maints, they vary from $£ 120$ to $£ 180$, out of which the registrai provides a staff of clerks. Where the glaints exced 6000, the salary is 6600 and elerks; where ther exceed soou, woo and clerks. Each court has alsu a ligh-hailiff, whose duties are outside, surving process antl levying executions. In the smallest courts, their salaries may fall to about $£ 51$; in the largest, they may rise to $£ 700$ net. There are 23 treasurers, who superintend the accounts of all the courts. They are appointed and remorable liy the Loris of the Treasury, and their salaries are fit 00 and $£ 50$ prer amme. All the property of the court is rested in them.

In cases above $£ 2$, and in cases of replevin and interpleader, either party to a suit may denand a jury. But this is rery seldom lnue. Ont of $3,723,540$ canses tried uj, to Decemler 1859, only 11.06 were tried by jury ; and in b004 instances, the Inrson demanding the jury lost lis canse. There is no ringt uf anyeal in cascs where the deht is under £20; lint the decisims of the court seem to be willingly aceepted as hinal, as appeals are excectingly rave even in the harier causes.

There is mimprismment for ant morely, hat a defendant may be conmitted to mism fur contr. macy, fram?, ir refusal to pay his debts when alle to der so. Of 11,512 persuns imprisonm in 185s, 725 prer thonsand incurcal the renalty thrown nouappearace when smmonof, and 8 per thomsand for not having satisfied the judgment, having had sufincient means to do so. The arerage term of inupisomment actually suflered was 17 days. Nou defendant can be committed fom more than 40 days at onc time, but imprisomencont ducs not extinguish the delat.

COUP is a French word signifying 'stroke.' It is used in certain ] hrases that lave lecome current in Europe. Coup detar, 'stroke of state,' means an arhitrary encroachment suddenly effected by the governing authorities unon the constitution of the state, altering or setting aside the prerogatives of other parts of the body 1 wlitic.-Coup de main, 'a stroke of the hand,' is apmid, in the language of war, to a sudden and successful attack.-Coup l'ail,' 2 stroke or glance of the eye.' is applied in speaking of parsons who have the faculty of comprehending all the relations of a complicated matter at one survey; or, in art, it expresses the general effect of a ficture or group at first sight.-Coup de theatre, means properly a trick of the stage to moduce an effect ly surpise, and is heace applied to any analoguns proceeding.

COUPED (Fr. coupé), in Heraldry, is used to describe the head, or any limb of an animal cut ofi from the trumk, and smooth. It is distinguished from cressel, i. e., formbly tom off, and therefore maged and uneven. A listinction is also made between couped and couped closp, the latter signifying that the head or limb is cut otf close, leaving no part of the neck or trunk attached to it. When crosses, bars. hends, and the like, are cut so as not to touch the sides of the escutcheon, they are also said to be couped.

COU'PLES, the name given in statics to mairs of equal prallel forces acting in opposite directions, aud at lifferent points of a body. It is shewn iv the art. Parallel Forces (q. v.), that when two parallel furces act in opposite directions on a hody, they may be renaced loy one equal to their difference acting parillel to them in the direction of the greatest, at a point not between but beyond the points where they are apphed; and which point receldes the further from their pinints of application the nearer they arproach equality, gettiug to an infinite distance when they become equal, and when their resultant accordingly is zero. In this limiting case, the forcus constitute a couple; they have no tenderey to trenslate the body; their action goes wholly to make it rotate abont an axis passing throng its eentre of gravity, and perpendicular to the plane in which the couple acts. Such luing the case, a comple camot he replaced or comitmacted ly any single force, for such a force wouli promuce translation; it can only be replaced (ir halancel ly other couples. The length of the straight line which mexts the lines of action of the furces at right angles is called the 'arm' of a couple, and the primet of the force into its arm is called its 'moment.'
Mast of the lealing propositions in the theory of C. are readily seen to be true, as sem as they are stated. Fror instunce, as the axis romul whel a comple tends to nake a lway rotate passes through the bouly's centre of yravity jurpucticularly to the plane of the couple. it dones mot matter what position the comple वceuphy in its nwo jlane. Also, supposing thu lody to lec rinid, the comple may le moved into any phan parall, to its awn, proviled its new msitinn be rigidly emmected wath the original pesition. It is aliso whions, on tho principle of the H.wer, that the alicieney of the couple depends on it f momont simply, sif that its arm may be
 firen th increassul or diminished is the case may

at the bow aml stern of a Nhip pulline with "rual force in opmosite directims; they will matio the slip tum round an exis thanely its contre uf gravity, at a rate depmong on the fure applind
 peints of the vessel nearer midshijus, it will umly turn
 to the ropes le increasm! anm, wh wrimont, it would the found that the fores must bor in reassul sin as that its prombet into the distane luetwen the ropes shall weal the prombet of the fore in the first case into the length of the ship. 'lhomath this we can ermpromel abting in the same mane, for we can then them romat till their anns sancint, and then give them a common arm; their froves will then act in the same lines, when their resultant into the am will be the new conple. Sis two 0 . which are situated in planes inelined at any angle to cach other may be replaced by a simgle couple (sce fig.). Suppose the C. both to be monel in their respective plames till their arms coincide with the line of intersection of the planes, CII. Bring them then to a common arm in this line, AB. At each end of this arm we shall have a pair of forces, say P'and Q, inclincd to one another at the angle of inelinttion of the planes. Their resultant, by the compusition of forces, will be a force $R$. acting in a line between the planes. The shall lave then forces $R$ acting at each cul of the arm, and cridently in directions parallel and oppmsite. If $\times$ arm, Alb, then, is moment of the resultant courle. Having scen low to comprumd C'. whose plathes are inclined to one another, the theory of the composition of C. may be said to be complete, for if they are in parallel lanes, we know we can bring them into the same plane and to a conmon arm, and so into a common couple. In statical theory, any number of furcus acting on a bolls, and not in cquilibrinm, may le relluced tir a single fores, a single courle, or a single force and a single coniple. We have shewn that the C, may all be reducel to onc, as well as those forces which do not protuce conples. If the single farce do not act perpendicularly to the plane of the comple it can always le compoundel with the forces of the comple, so as to reduce the whole to a single force; if it act mormen. diculaly, then it camot he compunded sitio the couple, and the boly will have at once a motion of traslation and motion of rotation.

COU'PLET. Any two lines which rhyme together may be called a $U$.; but the term is more frequently used by crities to denote two hines which contain the cowplete expression of an ilea, and are, therefore, to a certain extent independent of what goes hefore or what follows. The poetic wits of the age of Queen Ame excelled in this lind of aphoristic versification. Pope, it has licen said, reasons in couplets. For exanple:

Tis with our judgments as our watehes, nono Go just alike, yet each believes his own.'
COUPLING, an organ register, ly whidi two or more rows of keys can be connected lyy a mechanism, so that they can le Ilayed together.

COUPON (Fr. couper, to cut), a term simifying any billet, cheque, or other slip of Iaper cut off from its counterpart. It is, howerer, applied chietly to a dividend or interest warmant, which is presented for layment hy holders of delentioes. Compons in Great Lritain must mum be stamped.
 which is ita mpaniner in Franch.
(ondilidionda a town of fanme in the bapatment of crime, situat of on tha loft lank of the rive or

 mblitical writer, was hora in faris, damary t, 1772. He was clucated for the army , hat, without neglectiug his military stulies, he shewed a spumal predilection for ancient literature. In $17!3$ he becume lingtenant of artillery, served in the Italim canpaign 17:5-179!, and in $150: 3$ was ajlmantal meforpescortron. Aftor the batth. of Watram, he tendered his resignation, which was accoptem, Ile
 to his native country in 1812. Up to this ju piod, he was known fubliely only hy his translations frome the classics. In 1510 he apprearel for the first time as a political pampleteer, and rapidly aldainel a brilliant reputation. The piece in which he mand his delmut was the Petition ane Doux elvambers. In 1819-1520, he puldished in a jumonl, called te Cemenr, a series of letters containine an exjusition of his political ideas, which were those of an ardent constitutional reformer. These letters, for keenness, wit. and elncpuene, have been compresl to those of Pascal. His simple Misenurs (1s:1) was elirecten. against the profect then antertaineal of purchasim: (hambord for the Duc be Bomeaux in the nam: of the aation. It is exceedingly vigorons, elower, and sensible, and haul a great success. Fur bis aurlacity, he was tried and condemnen to "n. month's imprisonment. In 1823 he pullished his Lidret, a kind of memorantmon-book: and in 1 sal his Pamphet des Pamphlets, which is tinely callowl by Armand Carrel Le C'hont de ''yme the 'swatn' Death-song. On the loth April 1s. F he wat assassinatel near his own house at Yerty, in the department of Indre-et-Luire, a little lwfore sumsed The munderer was nower detected. (: was th pampleter of the midule class. Manly camest ness, pleasant wit. cutting irumy, ant almirald semse are his characteristies. Time, which gene rally dims the lustre of a pampheteer's reputation. Las not touched that of C., which is still is luringt as ever.

COU'RIERS. There are two distimet classes of courjers. The first to be noticel are emancen? government to carry, securely and expeditiously important dispatche's to and from ammassades it foreim courts. Active. and anenstomed to travel sleaking several lamoneses, and with a sutberent idea of their arm consequence, the will set out at a moment's notice. pursue their way ly stemmer. by rail, by hired roiture, or on haswack, with littli, intermission by night and ly day, until they reach their destination. Acquanted with routes, (fticials, and methome of clearing the way, noul proviled with all moper cuedentials, includinis a repuisite supply of cash, nuthing interrupts them in their cager course. Such are Gumproment $C$., a uscful class of pullic servants. The other class of C. arc not alis imilar in accomplishments, hut their services are limitel to private parties, and erming more geucralle into motic. We may euter more minutely int . a descriptinn of their character.

Private Cowiers. Thew are umally persma of
midale age, natives of Switzerland, France, or Germany, who have either been at some time gentlemen's servants, or been long employed as attendants in families while travelling on the continent. In some instances, they are of Engfish migin, am have travelled again and again through Europe with emplogers who relish the dignity of having a man-servant, and dislike persomal responsibility and troulle. Of whatever country, the courier has settled down into a perfectly cosmo. politan character. With equal fluency, he speaks Euglish, French, Italian, ant German, with perhaps Spanish, Portugnese, ami Pnssian; he is acquainted with processes of gettincp passperts and visés ; knows the best routes, the best hotels, and where anything cmors is to be seen. Acting for the time as a servant, he is not intrusive. Whether ly railway or stenm-boat, he knows his place, and makes his appearance only when he is wanted. No doubt, the comrier is an expensive luxury; his nsual wares being from ©s to tlo a month, independently of travelling fares. Ilis keepat ims is nominally $\mathrm{p}^{\text {mid }}$ by himself; lut, of course, it weighs with the hatelkeeper in making out the Dill. 'A eourier, however, thongh an expensive luxury, is one which conduces much to the ease and l leasine of travelling, and few who can afford one will forego the advantage of his scrvices. He relieves his mastor from much fatigue of body and perplexity of mind, in unravel. ling the difficulties of long hills and foreign moneys, sparing his temper the trials it is likely to endure from disputes with innkeepers, postmasters, and the like. If clever amt experienced, and disposed to consult the confort of his employer, he is a most nseful person. His duties consist in preceling the carriage at each stage, to secure relays of pusthorses; lue most make arrangements for his emfloym"s reception at inns where he intemds to pass the night: must secure enmfortalle roms, clean and Well-aiue 1 hets, and ander meals to he pepared, fires to be liehtent, taking eare that his master is called and the l"st-howes ordered at the right hour. He ought to have a tharough knowlenge of ewrything that rolates to a carrige; he slombl examine it at the enm of each day's journes, to ascertin whether it reguress any ropars, which shond be executer before setting out. He shohh superintemb the pracking and unpacking of the lagsage, se. It falls to the comrier to pey innkepers and postboys; aud he ought to take care that his master is not wercharged. Iocsides this, he perfurms all the services of waiting and attendence, cleaning and brushiner clothes: and he is mot prifectly accom. phished mencss he has a smattering of the art of
 Coutinent). As amons ordinary domestics, there are honest and dishomest C ., and it is of impontano that travellers shonla not hire then withoni proner recommematimes as to chanack For places at which ('. are to bue hearl of, we refer to the work
 Gimel. In laris, infomation respecting them will be oltaincel at Menrice's 1lotel.

 and Somsall fir his family. 'The comatry was lomes

some time very completely maler Tiussian influence, and the scene of many linssim intrignes, it was finally united to Russia in 179. It contains about 10.500 square miles, with a I"pulation, in 1567, of 597,258 , mostly Protestants. It is generally a level conutry, with ranges of low hills, and contains mavy lakes, buga, furests, and downs, liat some parts have a very fertile soil. The proprietors of laud are mostly German; the peasantry, of Lettish or Esthomian extraction, are chiefly engaged in husbandry: there is little mamfacturing industry or commerce. The capital is Mitau; but the most Howishing town is Liluau.

COU PSE, in Building, is a continuons range of stones ar bricks of uniform thickness.

COLRSES, on shipboard, is a name given collec. tively to all the lower sails; above them is the group of topsails: and, highest of all, the group of topgallant sails. The C comprise the mainsail, foresal, main-staysail, fure-staysail, and mizen-staysail.
CoURSINC, a methor of lunting laves by greyhomuls, in which the dogs follow the game hy sighlt. instead of liy sient. ( 1 , is of very ancient date, having been firactisal liy the Greeks. Withim the hast twenty years, however, its popularity as a sport has ereatly" "increasml, and the breed of the grey. hound is now studied with nearly the same care and zest as that of the race-horse. The method pursued in C. is brictly as fullows:

Mectings are huld in open districts, well frequented ly hares, where the greyhomis-technically called "dogs," as foxhounds are technically called 'hounds' -are entered lyy their owners for a variety of stakes, which are to be competed for-C., in this respect, partaling of the mathre of a race between horses. The iirst thing done is to select a juige to decide unon the merits of the best dogs; second, a "slipper" is apminted to hold the dogs in leash, and start them at the hare ; and, thirl, a flag-steward is chosen, who remains near the julge and amomes the colour of the rictorions los by means of a red or white tlay, according as the competitors are aranged. The next thing done is to 'beat' the fiell for a hare. When one is found, the judge usually allows it 80 or 100 yards 'law' hefore be crics to the 'slipmer' to let the dogs 'go.' Upon the word 'ga' the 'slipner' liberates the animals by a "pring attacherl to the 'slips'-i. e., the lones strons corl held ly the 'slipper' and commmicating with the leathorin collars fixed romel the necks of the dors. The julge's duties now hegin in earnest. He follows the dofs wherever they for, calculating carefully the numlur of 'pmints' mate hy each-a 'point' being any meritionnas achievement on the part of the dogs (as when the une outstrips the other at any time, or toms the hare, i. e., canses it to 'double'): and at last he mijuluws the vidory, mut urcasarily to the lon which has killed the have, lut to the one which has made the most pouts during the course, i . e, which has exhilhited the finest qualities of speed, sagacity, molurance, \&e.

COU1RT (Fry comr, ltal. comt, from Lat. cohors or chome, chortix, an enchane or cattle-yard; allied
 arempa) was micimally apdien to the symare or space rachast ly the haikina of a fordal castle: and hence it "ama to dronte the persons immetiately surmuming a fombal chiof ur supurior. Its appliea. tion is anw embinom to tine residenee and surround. ings of sumeregn princes. In Emghand, and in other frece comatrios, what wo spak of 'the emurt,' we

 being presented at ' 1 , or intromlucen to the soveroing, is only t" ha obtane loy persms of respectable pesition, amb is a thims smoht aftor mot only for the folus of the ceremomial, hat as givines it certain stamp of character; for, having ban receivert loy the socereign, a person may with justice expect to be receivel anywhers Viluable so far as a cremential, a reception at $C$. is carefnlly wament from almse. At the ( C . of her Majesty, (Quen Vietoria, there is is sempmons and very proper exelusion of all parties, male or femake, of damaged jepratation. Those who ain at the distinction of beine presented at $C$. belong chiofly to what are ealled the higher circles-mobility am lamed gentry; othecrs in the amy, navy, and higher dearments of the civil servicu; juiges, magistrates, elnurehdignitaries, members of the leamed professions: and the wives and danditers of these respective classes. Hen of scientitic, literary, or artistic attaimments dio not gencrally attempt to aplear at C., and neither, of course, do the chasses cheared in trale. It is usual to be presented on takingontice, or on attaining some persund dignity, on on arriving from an important and distant expedition. Fonns ledies of good fanily are said 'to come out;' on being presented at court. What prrhaps eontrilutes more than anything else to seeure selectness, is the obligation of appearing in "court-dress, an axpensive and somewhat fantastic costume of old date : from which only those who assume professional mifoms ate excmatel. As is well kuow, the court-dresses of laties are superl. It will thus be swem that the notions , pevailing anong forcimers ariving in Lungan - those from the Cuiten states in pirti-cular-as to the uracticability of indiscrminate presentation at Co. are crronems. It is the duty of the Lond 'hamberlain at St James's to furnish information regarding the steps to be allyited byy thuse who desire to be prsenten at C... , ither at levees, which are restrictell to genthmen, or at drawing-rooms, which are chictly, though mot exelnsively, intemted for laties. 'The days on which these receptions take place are alvertisel in the newspapers some tays lefore, with the necessary directions for preventing confusim. ][ar Majesty's birthay is the accasion on which the qreatest reception of the year takes phace. but there are no now presentations on that day. Any Pritish sulbject who his been presented at C in England, ean cham to be preseuted liy the British anbowsuler at any foreign court. Those whe wish to be nacre spectators, can olstain tickets to the comridw, where they sce the company pissing in ant ont. by aymy inge to the Lorl Chamberlain. Fur this parjuas, howeser, an iutroduction is requirei. It is indis. prensable that the names of gentlemen desiring to be presented, and of the nehleman or gentleman who is to present them, be sent to the Lind Chanberlan's othee several days promously, in orler that they may be sulmitted for the Queen's aproLation. Cientifmen are also requestel to bring with them two large cards, with their names clearly written upon them, one of whiek is left with the Queen's page in the presence-chamber, and the
wher is Adivaral to the Lome (hamberlain, who ammoners the name ter her Majosty. The same

Soaction for delst can originate in the $\because$ ofs. in which the interest of the fursuer is less than sor. With fey exeptions, the jurgments of the inferion courts of sootind are reviewalide hy the C. at a, hat this vule doesinot aplly the swalldelt conts. The judgunts of the C . of s . may be ajpeakel to the IFonse of Lords within two years.

COURTALLUY, a town of the district of Tinnevelly. in the 1 resibucy of Madias, stands in lat. $S^{\circ} 50^{\circ} \mathrm{K}$., and lons. $70^{\circ}$ ? $0^{\prime}$ E., near the jume. tion of the Eastern and Western Ghauts. Open towards the east, at a height of 700 feet abore the sea, it is clsewhere emlusomel in lills, having, in its immeliate neighbourhood, a deep glen which athorls casy commmication between the opposite slures of Finlustan. The place is a favourite retreat for invalids, deservedy enjoying a reputation for satulnity of air, richness of regetation, and beanty of scenery. The indirenous flora comprises 2000 species, anil many cextics, such as the mutneq, clove, and cinnamon, have been introunced with success.

COU RTESY, or CURTESY, in Lat, is the life interest which the surviving hushand has in the real or heritable estate of the wife. It is remarkable that, buth in England and in Scotland, this customary right should he recrarden as a national Feculianty-that in Englane it shombl he called the C. of Englanl, and in Scutlad the C. of Scotlaudwhereas it is well known to be peculiar to neither of them. Traces of it are to he found in a constitution of the Emperor Constantine (Conle 6, 60, 1); and there can be no dount that it hal found a place, with all the peculiarities which now belong to it, in the coutume of Nimmandy, from whence there is every reason to think that it was transferred to England (Barnage, mol. ii. 1. 60; Stephen's Com. vol. i. p. 04 ; Fraser's Domestic Relutions, i. p. 6iry). The four circumstances which are reduisite to malie a thancy by ( 1 . in Englam are-marriace, scizin of the wife, living issue, and the wife's death. The rule that the child must have heen heard to cry, which at one time was followed in England, is still adhered to in Scotland. It is not necossary, hons. ever, in either country, that the child survire; it is enomech that it was unce in existence, although it should have died immeliately after its hirth. In buth countries, the child must be the mother's heir. anl it is consequently said that $\left(\begin{array}{l}\text {. is dae } \\ \text { to }\end{array}\right.$ the surviving lusband rather as the father of an heir than ans the widower of an heiress. By 19 and 20 Viet. e. Foo, which carbles temants fur life of sothel estates (see Sitilid Estant) tumakn" effectual leases for twenty-one years, subject th the exceltions and provisions in the act contanod, a similar purer is :lso confermel upon tonauts lay the $\because$ of unsettert estates (stephen, i. 1. (6) As). As the law of Sentlame on the juint, see Ihnter on Lamblom and Tenant, i. 1. 119 .

COURTESY TITLES. Titles of homon (f. b.) are imparted by the sowerein or other competent authority. Indewndently of these, there are 6 . 1 B . a sammil ly ur given to individuals, and which have I". validity in law. The torm C. T. is lust known in connection with the tithes given ly pepmar consent to the sons and danghters of certain perrs. Jonglish dukts, miamuises, carls, and viscomats have sievral titles, acemmiated loy distinct patents in than frouressive steps in the peerame. 'Thus, a duke may at the sume time lae a mariuis, an cart, at lam, ami a branct; a matryms may he also an car!, ©e. ; and an earl is ilmost always a haron.

In orilinary parlance, they respectively take ouly their lighest title. One of the inferior titles so set aside is permitterl, as a matter of social dignity, to Tre assumed by the eldest som. Fur example, the Duke of Dedforl leing also Marquis of Tavistuck, lis ellest son talies the title of Xarpuis of Tavistock ; and the Duke of Buccleuch and (ureensberry beimg also Earl of Dalkeith, his eldest son takes the title of Earl of Dalkeith. When it baplens that the inferior title is of the same mame as the tirst, there is a sumewhat diflerent usage. For example, the EnI of Gosford being also Viscount Cosforl, his eldest som, to present cunfusion, takes only the family surname, Acheson, with the pretix Lorl-Lurl Acheson. The younger sous of dukes and marquises have the contesy title of Lurd prefixed to their Chistian and swame: as, for example, Liond William Lennox, a younter son of the Duke of liahmom? or the well-known statesman, Lord Jobn Russell, a youmger son of the Duke of Bedford. The ellest son of au eard, when not a viscount, takes his father's sccoml title of Lord: as, for example, the eldest son of the Earl of Wemyss is styled Lowl Eicho. A proper understanding of these conventional customs will serve to clear up some of the penplexities into which foreigners are apt to becme involved in thinking of our highly artificial social system. It is to be kept in mind, that titlus by courtes do not raise their bearers alowe the rank of cummoners; and that, conseynently, they are eligible for clection as representatives to the Honse of Commons. Yery many of the prees, indeed, begin their political career as county or borough in mesentatives under their U. T. ; servigy in this way a liond of appenticeship as statesmen before they are adranced, by the decease of their fathers, to the Hoase of Lords.

The dimulaters of inkes. marquises, and eanls have the title Laty mefixal to their Christian and sumame; and in the event of their marrying a person of inferin rank, they retain the title Lady with their Christian nume, adling the sumame of their husband. Yet, these are but coutesy titles. The unly vain! title they can clam in vintue of their hirth. is the pretix Honourable, which is applicable aike to the sons and laughters of peers. The wives of barmets reecive the conrtesy title of Laly; thoir lavful lesination being Dame. Ladies whi have hal a title ly a first marriage, retain it as a matter of courtesy when they are married : secunt time, thongh the alli:unce be with a person withont a title -a circumstance sumetimes leading to a certain awkwarlness in lesignation. In Nootlam, the dulest son of a loron has the courtesy title o Master. For example, the chlest son of Lord Embank is styml Jaster of Elibank.

The tith Liinlt IF momalile is givea in some few instances hy courtesy to onlicints, as in the case of the Lurl . Niverate for seotlanul. The julyes of the Cimet of Sicssom in sentand, on first taking their seat on the boneh, assume the ernutesy title if ford along with thar own sumame or a temiturial title. bat such titles ar" wish only sematorially. In writin, the real natme is suldscribul. The titles of Mr or Mastor aml Esquin (y. $\begin{aligned}\text { M }) \text {, are now given }\end{aligned}$ by cometer to nemly all chases of persuns. For ain exat dulinition if titles by comrtest as applicalde to mombers of thu berrace, we refur to the Somathes Assistan, Lumbion, Bris.

Eoole Normmle. His efforts for the organisation of primary instruction are to be seen in those valuable ranots which he drew up, frum personal olservation, on the state of pullice education in (xermany and Itolland. In 1540, he was elected a memher of the Aratemie des Sciences Morales at Politiques, and in the same year became minister of Pnblic Instruction in the cabinet of Thiers. The revolution of lSts fonm in C. a friend rather than an enemy. He aident the government of Cavaignac. and puldished an anti-socialistic browbure, called Justice et Churitio. After 1549, he disappeared from mublie life, and died in 1 sG7.

It is more easy to state what philosophical doctrines bave received exposition at the hanils of C., than to determine precisely what are his own. At first a disciple of loyer-Cillard and the Sootch school, he was attached to the Isyehological method of investigation; afterwards a keen student of the German school, he expmuded the views of Nehelling with such conions enthusiasm, that he might legitimately enounh have leen considered a thorongh Pantheist. Judging from such a book as Du Trai, du Bewu, t d du Bien (1-5:3), he seemed more disposed, latterly, to regard philnsmphy in its religions and asthetic relations. See Eclectictos.
C.'s chief works (hesides thuse alrearly mentioned) are Frumments Philosominues (1826), Cours de IHistuire de lis Phitusophie (1827), Ourrages inédites dAhelerl (1836), Cours a Mistoive de le Philosonhie Mulerne (1811), Cours ditintoire de la Philosophie Morale at $\mathrm{I}^{\prime} \mathrm{I}^{\prime} \mathrm{II}^{*}$ S'ícle (18t1-1811), Lecons de Philosophie sur Kout (1842), Des Pensées de Pascal (1842), Etudes whi les Fommes et le Sociétedu X1'11 Siecle, \&e. (1553). C. also contributed a great variety of papers to the literary and philosophic Reviews of France.

 decemmen of date fine to tive years later than the

National Corenant, since the signing of which, Charles I, had broken with the Enghish parliament, set up, his stinlard at Nottingham (August 1642), anil from lis various successes, it was thought lue might linally le able to reimstate Episcopacy in Scotlame. With some alarm on this gronnd, the Scotch willingly received orertures from commissioners Whputel from the English parliament. Hopes were held ont to the Seottish nation, that in the event of success against the king, the Presbyterian model shoull supersede the Epispumatian both in England and lrelanl. Approving of a measme of this kinl, the Seottish Estates entered into what was callel? a Solemn Learue and Covenant with the English parlimment. One of the provisions of the lomit of asreement was, that the Seotch shouhl send in army into Enghanl against the king, which they disl in Jannary $16 \pm 1$.

The Solemn Lengue ant Covenant was subsmidel loy many of all ranks in Seotiand and Erigland, includine the Assembly of Divines at Westminster, was ratified by the General Assembly at Edinburgh, Augnst 17, 1643, and the Scottish parliament, July $15,16+4$; and subscribed hy Charles II, at Spey, 16\#\#, aud Scoun 16al. Like the National Covenant, it has, till the present day, a place in the volume which comprehends the Hestminstry Confession of Feith of the Cliurch of Scotland. While the Siational Covenant refers to the observance of the Preslytorian polity within Scotand alone, the Solemin League and Covenant is much more comprehensive. Those who sulnscribe it, setting ont with a profession of attachment to the Eliureh of Scotland, are to embearour to briner abont a mifomity in reljgion and churela-discipline in the three kinurdons; and further-' That we shall in like mamer, without respect of persuns, endeavour the extirpation of popery, prolay (that is, church-govermment liy arehbishons, hishors, thein chanculors, ancl commissaries, deans, deans and ehnoters, avehluacons, and all other ceclesiastical eflicers depending on that hierarchy), sumerstition, horesy, schism, profaneness, and whatsoever shall le fomin to be contrary to sound luctrine and the f"wer of gimlliness, lust we martake in other men's sins, and therely be in clanger to receive of theip plamus; and that the Lorit may be one, ann] has name one, in the thate kirumboms.'

W. C.

CO'VENT GARDEN (properly Convent fiurden, from having been originally the garden of Westminster Abbey) is a square in London celelarated for its great marlict of fruit, vegetables, and Howers, In the 17th c., C. Fi, was a very iashionable quarter of the town-the residence of many eminent persons. The secne of one of Dryden's plays is laid bere, and frepuent allusious are made to the place in plays of Charles II.'s time. The market, now so famous, aprears to have origimated about 1656 in a few woolen sheds and stalls. (. C. is for a stranger one of the sights of Londom, and is seen to greatest alvantage abont three o'clock on a summer morning; 'Tuesiay, Thurshay, and Saturday being the principal days.

CO'VENTRY (Convent Town), a city, parliamentary and muncipal borongh, and manufacturing town in the nurth of Warwickshire, on the Sherbonne, an afluent uf the Aron, 18.1 miles enst-sonth-east of Birmingham. It stands om a gentle eminence in a valley, with a rilge of lull on the sonth, and contains many ofd houses, with timberal fronts, projecting into narrow strects, and belonging to the 15 th and lith centuries. The modern part of C., how ever, is well, thongh not regularly built. The chief buiklings are the churches, with imposing spires. St Niwhel's Clurch, built l313-1395, is said to be the largest parish church in England, and is one of the noblest of the lighter (rothic structures. St Mary's Hall, Imilt 1450, for the Guild, is one of the finest specimens of ornamental work in England, with grotesque carved mak roof, ancient tapestry, and great painted window. In the market-place formorly stood a rich hexagnmal Gothic eross, 57 feet high, crected in the lGth c , in three storius, with expuisitely finished pillars, pinnacles, and nichos, with statues of English kings and samis. before the year 1760 , the eross had fallen to elecay, and in $17 \% 1$, the remains of it were taken down and removed. The ancient walls, three miles in circuit rouml C'., were demolished lyy Charles II. Pop. (1861) of municipal borough, 40,437. C. returns two members of parlianent. The chief manufactures are ribbons and watches. There are large silk-1 yong works. $C$. is nearly in the eentre, between tho four ornat Vinglish ports, London, Bristol, Liverpmol, ami Hull, and has extensive caual communication with other parts of the cometry. It is a vory ancient place. $1 n$ lo44, Larl Leofric and his wife, lanly timiva, fommed here a magnitieent Ibenedietime monastery. In menory of Gudiva (1. ソ゚), who is said to lave ridden round the town hakwa, to free it from certain impusts laid on ly lece lusband, curious and splendial processinas are sometimes hehl in C. COVBNTRY, SIR Juns, lam obtaineal a miche in
 the month of Octulec 1600 , he rose in $j^{\text {millimment }}$ and asked a question relitive $t^{\prime}$ a measure bofore the FHase, which was takon as an muwamantable redection son the kinuts amours. Charles was furious, and sent some of his gitavels to watch in the strects where C. liverl, and leave a mark upmi him. C. was attacked one night, and hat his nuse cat to the lome. Iarliamunt took notice of this atrocions ontrase, and passed a bill known ly the name of the Coventis Act, making cutting and maiming a cajpital olfonce; but they had not courage sufficient to bring the king's bravoes to trial.

CO'VERDALJ, Miles, an eminent English divine, was born in Yorkshire in 1487. He was edueated at Cambrilge hy the Augustin friars, and becoming an Augustin monk, was ordained at Nor wich. He appears, however, to liave soon changed his religions opinions, ane to have devoted himself earnestly to the work of the Jeformation. Beins abroal in 1532 , he assisted 'Tyudale with his trans. lation of the Scriptures, and three years afterwards alpeared his own translation of the Fible, with a dedication by himself to Ifenry VIII. This was the first English Bible sanctioned by royal anthority, as, indeed, it was the first complete translation of the Bible printed in the English language. The Psalms of this translation are those still used in the Jiook of Common Prayer. In $1538, \mathrm{C}$. , witl the consent of Fing Henry VIIF., and with the fermission of Francis I., went to Paris to supurimtend arother Euglish edition of the Suriptures, his reasuln for going to l'aris being that paper and workmanship were there cheaper and looter than in lingland. The inguisition, however, notwithstanding the royal licence of Francis, interferel, seized the whole impression, consisting of $2-300$ copies, anti condemned them to the flames. But tlurough the cupidity of one of their execntive officers, who solid a considerable number of the heretical books to a haberdasher as waste paper, some copies were saved and brourst to London along with the presses, types, がe., which bad been employed in printing them. Several of the worlmen also came over to London; and Grafton and Whitchuch, the noted printers of that day, were thus enabled to bring ont in $153:$, under C $\because$ 's superintendence, the Greal Bille, commonly called Cranmer's Bible, on account of that prelate having written a preface to it. In 1551, C. was appointed to the see of Exeter, the duties of which high ceclesiastical office he discharged with great zeal, until the accession of Mary in 1553 , when he was ejected, and throm into 1 ison, from which he was only released after two years' continement, on the earnest intercession of the king of Demmark, whose juterest was evoked hy his chaplain, C.'s brother-inlaw, and on the condition that he should luve the couniry. (. went to Demmark, and sulosecruently to ('rentra, where he assistel in produeing the Genere Translation of the Scriptures ( $1557-1560)$. On the aceession of Elizabetb, he retmaed to England, lut certain notions concerning ecelesiastical ceremonies inbiber at Geneva operated against his preforment in the chureh; and it was unt until 1564 that le was eollated to the rectory of sit Magmas, Lomdon. Owing to age and intirmities,
he resignt this lixing in limit, and died in ithant two years afterwately. (. was the mithor of Beverat

into many gencra and even families. The different kinds of crabs dither very nuch in the fom of the carapne (the lack), which in some is urbicular or acarly so; in some, much broader than it is loug; in others, lonser than hoal; in swne, prolonged in frout into a kind of leak, \&e.; illso in its smoothuess, of roughacss with hairs, tulbercles, or spines; in the leneth of the legs, \&e. The eyes are emponnt, with hexagonal facets, aml are elevated on stalks, which are generally short, hat sonetimes consideraby lengthench, and which have the power of motion, so as to turn the cye in different directions. The tirst pair of limbs are not used for locmotion, bat exhibit in great perfection the characteristio claws or pincers (chede) of the decapod emistactans. Crabs are inhabbitants of almost all seas; must of then. howerer, having their links formel for walking rather than for swimang, are fond chictly near the coast; some inkalinting compratively dep water, and whers abounding in those pats which are left by the receling tide, where they oceur rqually in the rock pools aud among the moist sea-wetls, sume small kinds of cralis ( 1 'eu ' 'retho) are often forind in the inside of mussels ame other hivatve molluses. some crals inhalit fresh water, purticularly in the Wamer parts of the worla; anlotimers, kiown as Land-crals (q. v.), live mon's moist herlage, or burnw in sad on earth. Some have the last par of limbs expandeal at the extremity into a l woal bade for swimmins, and some have even all the fund mir of limbs intendel for lucomotion thus expadel, and sometimes oreur far out it s :a. come of the crals, with very lons less, are known as sumdercrabs. ('rabs monlt or change their shell, nut at fixed intervals or seasons, lint accorling to the exigencies of their ornwth; the change lneing made with areat fremen when they are very yodas, but rimely in adramerias": imecti, from the molluses, and ither animals sometimes thand adhering to the carance. it is inferred that the same covering is sumetimes whrn fur a number of years.-The metamordhosis of crabs is uoticed in the article Crets. TacEuse- L'ralis are interestin's inmates of the aquariun, from their readiness in seizing fook, their activity in tearins and cating it, their general habits, and, in farticular, their pugnacity. The
munlor of spechachs is agot, however, to be soon diminabed liy the stronger killing amd eating the weaker. - Many kimets of eratos are used as articles of fumb in ditierent parts of the wombl, as the Large Eblible (: (f"anori Patuerus) and Small Edille C: (Fincimas Moum) of the british shores. The latter is extremely emmmon on all parts of the corast, lut is not nearly so much esteemed as the former, which is momeh sought after, and is canght either in the hriles of the rorks at low tide, or by meaus of a kinit of trap, a hasket which reandly jermits its -ntrance bint not its escape, anl which is bated with meat ar aminal garbage of sume kind. In winter it seems to retire to decper water. Its black claws and very broad carapace arched at the sides, readily distinguish it from all other hritisly species. It is sometime's nearly a foot in breadth. 'The claws of the Fitible $C$. Were formerly gromed to fuwder amblused as a maticine, having however, wo poperties lnit those of carbonate of lime.

CRIBIBE, GEOFGE, a late English pophtar poet, was lorn at Alillorwugh. in Snftolk, on the e4th December lint. His inther was a warelouse keeper, aml collector of the salt-duties at Ald. horongl, ant exerted himself to secure for his son a smperior colucatiom. C Cally exhibited a passion for all linuls of lumk-learuing, with a deeided bias towarls powtry. After liemin tomeably grommded at solond in mathematies anl classies, he was, in lis 1 tth year, aprenticed to a surgeon at Wiekham Trowk, near Bury Nt Eimmols; but he had no liking for the profession, and nltimately 1 ro-
ceeded to Lonlon, where le arrived in 1780 , with \&in his pocket, to make a trial of literature. For a while lie was very undurtmate, it last. when threatened with arrest for debt, he resulred to make his ense limown to Tharke. De told Mr Lockhart. years after, "the nidht after I deliveren the letter at the noor. I was in such a state of argitation that I walked Westminstio Brielpe hackwarts and forwards mutil daydiat." The grat mator at once appointed an interviow, lomael wer ('Ss petical compositions, suggested several alterations which were adoperd, and finally tow The Liboury and The J'illuge tw Mr Donlsley, hy whom the dirst-mamen ponm was pinh-
 witl his gencrons and lurlliant acernaintancer and while theremet Fox, Sis Joshan lifyomals, amd lam Thumb: the last of then invited tho new colderity to lreakfast, and [nesenten? lim with a bank-mate for $\pm 1010$ at partins.

the grest of Sir Walter Scott. Itis health began to fail in 1828 ; he died on the : 0 of Febmary 1832 , ases 78.
(C. Aisilamed all the luxuries of his art. IIe has no horoes with a flyperion front, and no heroines radiant as Aurara. ]Te worked with the delf, not with the poretlain of hmman clay. He concerus himself with wild smugglers, denizens of villages by the sea, full of ancient and fish-like smells: gypsies on the heath cooking the fowl purlomed from the neighburing barnyard, with tramps, vagabonds, and vagrants, and the inmates of the workhouse. On his page these unsavoury individuals live. earouse, eurse. lmawl, mad die. He las pages stern as anything in The Infemo: many, droll as llogarth's pictures; and one or two so sweet, and tender, and pathetie, that mon massessed of any sensilility can read them ummorel.

CleABETII, Ilink and Wouter, the last surmamed the Elller, were two brothers, glassprinters, born (it is supposed) at Couda in Sonth ITollaml, and who fomrished in the latter half of the 16th eentury. It seems Dirk visited Franee in his youth, whist Wouter journeyed to ltaly, where he studicel the works of Raphate, as is evident from his produetions. Wromer, it is said, smbrassed lis hrother in drawing, grace, and cleamess, while Jirk surpassed him again in colouring. They, however, were jealous of each other, anl each conecaled from the other the secrets of his processes. Their conjoint work in the church of St Johm at Couda, is the masterpiece of the two brothers. Of the eleven fainted windows in that chureh, seven are by link, and four by Wouter. They were done between 15.5.5 aml 157l. Jink died, it is lelievel. in l601. It is unknown whon WFonter died. The brothers weve huriol in the sanctuary they had so surpassingly illustrated.

CRACKED HEELS. From careless nrooming. washing horses' legs and impereetly drying then, pemnitting them to stand in accumulations of filth or exposed to dramests, the skin becomes inflamel, tenker, itehy, thickened, and by and by eraeked. An ichorons hoisome diseharere exudes, and lamencss often results. Th animals with round gummy legs, it is sonctimes constitutional; underbred lorses with rough hairy fotlocks present the majority of easts: white heels, heins more debleate, are especially adlecterl; whilst the himd limbs, exposel as they are to filth aur eoll, sulfer most frequently. - leanse camenlly with tepinl water; wash with in dibuted solntion of (ionlaris Extract, or any viher mill astrmont: of drose acoasionally with oxite of rine nintment.  sickness in 1.mmbithe, le retired with two jujuls to Wilthan Athey: aml demy TllI., in company
with Gardiner and Fox, afterwards Bishops of Winchester and Hureford, happening to be in the neirhhourhood. the event proved a turning-point in the life of Crammer. The king was then seriously coneernel about his divoree from Catharine of Aragon, and in conversation on the sulject with Gardiner anil For. C'ranmer sugrested that the question shonhl he 'tried aceording to the word of God.' Fox liaving mentionel this suggestion to the king, Henry was greatly pleased, ant 'swore by the muther of (iod, that man hath the right sow by the ear.' From this tine, Henry never lost sight of Cranmer. He was asked to reduce his suggestion to writing, and to have it submitted to the European universities. After this he was apminted Arehdeacon of 'Tauntou, and one of the royal chaplains. He was also sent to Rome on a special embassy about the divoree, but met with little suecess. Subserquently, he was deapatched to the Limperor on the same errand, and while in Germany, he married a seconl time, a niece of the German divine, Osiander. This took place in 1532; and shortly afterwards, on the death of Arehbishop Warham, he was recalted to filt the varant see. Under his auspices, Henry's divoree was spedily carried through, and 0 . maried the king to Ame Bolern, on the ©Sth May 1033. In Ame's subsequent ilisfrace, and again, in the affair of Anne of Cleves, the archbishop took a part not very erelitable to him. His position was no doulst a difficult ore: but his eharacter was maturally pliable and timil, rather than resolvel and consistent. The same spirit characterises the moasures of religions reform which were promoten ly him. On the one hand, he joined actively with IIcnry in restricting the power of the pope, and in suppressing the monastcries; but, on the other hant. he was no less active in persecuting men like Frith, Forrest, and others, who, on matters of religious faith, were disposed to adrance further than himself or the king. He did what he could, however, to resist the reactionary movement which took phace in I 539 , and which is linown ly the institntion of the 'Six Articles.' [Ifewas also instrumenta] in promoting the translation and circulation of the Suriptures. On Henry VIlI.'s death, Cramer was appointed one of the regents of the kingdom, aml along with Latimer and others, largely enntributend to the alvance of the Protestant cause during the rugn of Edward. Ite assisted in the eompilation of the Service-book and the Articles of Rolligin. 'I'he latter are sail to have been chiclly ermposul hy him. He was also the author of form of the liomilies.

On the accession of Mary, he was committed to the Tower, along with Latimer and Liclley. ln Dlareh 155t, they were remosed to Oxford, anil confinel there in the common prison, ealled the bocavin. Latimer and lialley bore their crucl fate with marnanmons comrage; but the spirit aud prineiphs of (\%. temporaily wave way under the eeverity of his sutferings. Tle was induced, in the hope of swing his life, to sign no fewer than six recantations; Int his enemics were determined to he satisfiml liy mothing short of his death. On the 2 let Natch 150 , he sufferel martyrdom, as his fellowr fommers hal done, opposite Waliol College. Il is ormarare retumed at the emd, and he died protestins his ryentume for his unworthy weakness in chamine his fath, and showing an unexpectent fortitule in the midet of the flames.

- IANNOCES, the name crom in lrelam and in seotland to the fortition islands in lakes which wow in common use :as dwelling places and phates of re Ene amone the coltic imbatitants. The oty-
 to ran to the timber wheh was amploged cither in
the fortification of the islancl, or in the construction of the houses which were placed mon it.

The earliest notice of such lakedwellings which has been observed, is in the pases of llerodentus (honk v. chap. 16). Writing of the l'ersiau invasion of Thrace and Macetonia under Darius-about 500 rears before the Christian era, and less than 110 years before his own death-he relates how the satrap Megabazus, warring agaiust the l'eonians, led certain tribes of them eaptive into Asia, lnt failed to conquer those who inhabited Lake Prasias. 'He sought, imleen,' says the historian, ' to subdue the dwellers upon the lake, but eould not effeet his purpose. Their manner of living is the following. Platforms, supported upon tall piles, stand in the middle of the lake, which are aproaehed from the land by a single narrow bridye. At the first, the piles which bear up the plationns were fixed in their places lyy the whole body of the eitizens; but since that time the enstom which has prevailed ahout fixing them is this: They are brought from a hill called Orbehs, and cyery man drives in three for eaeh wife that he marries. Now, the men have all many wives arnece, and this is the way in which they live. Eaeh has his own hut, wherein he dwells, npon one of the platforms, and each has also a trap. door giving aecess to the lake beneath; and their wont is to tie their baly-chidren by the foot with a string, to save them from rolling into the water. They fed their horses and their other beasts upon fish, which abound in the lake to such a degree, that a man las only to open his trap-door, and to let down a basket by a rope into the water, and then to wait a very short time, when he araws it ull guite full of them. The tish are of two kimes, which they call the prapax and the tilon.' The Lake Prasias of the Fath of of History secms to be the modem Lake Takinos, on the Strymon or Fara-sn, a river which, rising on the burders of Lingaria, flows sonthward throngh Rommelia, and, after expanling its waters into a lake, falls into the Ginf of Contess. The fish named ly Merodotus have not heen ilentitiol by naturalists; Lake Thekinos aboumls in carp, tenel, and eels.

The islanl-dwellings of Lake l'rasias met with comparatively little attention until archeologists, prite recently, fonnd the remains of similar hathtations in other parts of Enrope: The inst disenvery was mate in Freland in 143\%, Ley Mr W. R. Wihle. one of the secretaries of the lieyal Irish Aeademy: The small lake of Lagore, near Dunshaghtin, in the connty of Meath, having leen drained, a eirendar mound, which had lecu an islam in its waters, was abservel to be thickly strewel with bones. As these wor to be earted away for manure, it was formal to be an artiticial structure. Its circimenfer ence, neasumins 500 fect, was formed by upright piles of wak alont 7 fort lones mantised iuto oakHanks laill flat upon the marl and sand at the bottem of the lake. The umbish piles were tied torather ly cross-beans, and tho space whiclo they raclosed was divided into compartments by oakbeams, sime of which hanl gromes, so as tu allow pands to he driven down lowsen them. The eompartments thus forman wre fillod with bones and hands peaty carth. fortions of a seernd tier of uricht piles were nonserver rian from the first tiex. The bones were ascertained to $\mathrm{l}_{1}$. those of several varictics of "xom. of swime, dur, goats, sheep, dogs, foxes, lonseg, anl aseus. Along with them were fumb a vast number of weapons, omaments, and intemsils, faskimme of stome, Jhme, wood, bronze, and irm; such as swords, linives, spenes, javelins, daggers, "hotstrmes, yumern ( 1 h hand-mills), heals, pins, bromelnes, combs, horse-trappinge, shears, chains, axes, phts, and bowls. On reference to the ancient amals,

Mr Wilde's discovery at lamore was falluwnd liy
 lrelind, so that in lsiothe existenme of abut lifty
 has seen an increase of the mamber. 'llury show several varicties of ronstruetion. The islium at Iagore is a fype of the morly ablificial arammer lint most frequantly the crammere was partly natural. An islet just level with the water, was maiscel ibtidicially a foot or two almve it. An islet tom small to be a conveniont halitation, or tou casy of landing to he a place of Jefence, lianl its aroa artiticially enlargea, on its banks artificially struestlument, penerally by piles or stoekithes, hut neeasionally liy leaps of stones. The space thons enelused is gencrally a circle of from 60 to 80 feet in diameter ; lut in some cascs the enclused space is lidere, and of an oval shape. The piles are generally of onk, mostly young trees, from four to nine inches hroad, still bearing marks of the hatchet; usually a single row has been considered emongh, hint there are instanes of two, and even of three ruws. It would secur that originally the piles had risen sureral fect abone the water, and it has been suphosed that they wre interlited with branches placed horizontally, so as

 heathas lawe been mot with. Ía waty latis from thet latand to the manimand; fut in genderal the cranome was to be dathal only ly latat,
 ont the ramains of at promitive banoe, ladluwal ont of tho trunk of an wak, heing fonanl besimpit. In at lust one erammoge, a piol ur jedy progeted fram tha island; it was a dondle row of piles smad strotelofers. rumbinu paralled to each uther at a distance of alomit cight fect, and supporting a platform of lows. Wis almost every crannuge ous or two puerns_(1. ₹.) have been fomm, alonis with hones of oxem, doer, ionte, and swine, horns of cattle, deer, sherp, and gotets, luars' tusks, and sharphing stones: frasments of puttery, amb aticles of stome, bome, hom, wool, chass, valyme, honaze, houss, aml irnm, are of somewhat rarer oevorrenes. Nany of the (.. lind becon summerged lyy the madnal rise of the lakes in which thes stemil. su that then existence only became konwn as the great dramase-works of late yours reabed the waters to the ald level.

The acempanying wonlent shews a section fom the seale of 1 inch to at fect) of the cranmoge in

Ardakillin Lonm, near Strkestown, in the conntr of Losconmon. The uppermonst line marks the highost level of the: waters of the lake: the mikelle line. the conmon winter level; the thiml dine, the emmmon summer level. The uppet surface of the crammege Was formed of a hayr of loose stoues, surrounded by a wall, partly supported by piles. The stones rested on the natmal clay, peat, and bouders of the island, in diorging throush which strata of ashes, hone's, and lons of timber were met with. The stockades were of onk; the olflique or slantime stockade shewn in the woodent represents a girdle of sheet-pilin: which quite eneincled the cramone.

The woorcnt on the following prace gives a grounch-plan (on the seate of 1 inch to 20 feet) of on: of two C. in Drumaleagne Longh, in the emanty of Leitrim. The circle within the ring of stockarles is (i) feet in diameter; in some phaes there are two, and in others, three rows of stockades; and within this onter ring, there are goups of pildes, some of them arranged apparently for some special propose. The oblong space in the middle, marked $A$, is envered loy a rude pitationm of romil lors, chiefly of ahler, from four tos six feet in length; it was pirob. ably the flom of the lor-house, which was the ehicef on only Twellimp-place on the islet. B shews where the learth stoni-a chllection of stomes, still retaming traces of fire: © marks a heap of still clay; 1 , the root of a large tree nearly huried in the peat, the surface of the wood being hevelled off with a hatchet, so as to form a sont of talble, muler which was foum a heap of bones, apparently of deer and swine.

The Iaish annals, it has leen seen, make mention of $C^{\prime}$, as early as the oth c., and they figure in histury down to the mindle of the lith censtury 'lie eramonge of Loush Lymeh, in Antrime is sluwn as the birthulace of 'olisitto, a chace whu ficured in Abontrose's wart, and has fommel a flace in ome of Milton's sumnets. 'The cramme of limelam latae, near Dangumon, was the last retreat of Sir lhelim O'Neil in 1641. 'Two years later, there is recome bit an attempt to flow the eranmore of Lamohinshin, in the county of Londunderry, hy tumine a strenn into the lalie, and dammine up its mutlet. 'llhis attempt faled; hat in J $0 \cdot 1.5$ the garmison were conjelled loy limger to give the crannege to the limate. and make their escalie. Tn 1567 , an agent of the English govermment, who was asked what were the castles of the o'Noil, wrote in reply: 'Fur castles, he trusteth no print theremato for his safety, as appeareth by the razimi of the strungest castles of all his countries; and that fortilication that he only dependeth upon is in certain fresh-water lochs in lis conutry, whieh from the sea there eomes neither ship nor loat to aphanach them : it is thonght that there, in the sabl fortifen inlands, lieth all his phate (which is much), and momes, prisoners, and gasres [i. e. hostares]: whid islamis lave in wars heretofore leen attempter, and now of late arain by the lord-deputy there, sir Marry Sydacy, which for want of means fur safe combet unen the mater hath not prevailed.?

 riginal state.
The lake-twelling of switandan have ohnomsty much nome resemblane to those of Iake lranias, Asseribath liy Herokhtne, than to the ('. if Irelam!, Fint the swiss at the same time ean :he wexmpher of the Trish type. At Nidhas Stembry in the Lake of Biome, there is an atificial momal of stomes. rosting on horizontal planks, that meneronl ly a row of upheht piles. It is now sulmerged, lnet when as the Swiss herlien-the lalk stonl at a lower luen, it must have been an island. At Moringen, in the same lake, there is another pikedmilolise melawing a monnd of stones which has an area of ahout half an acere, A canoe wheld had heen ussd in its construc. tion liws with its load of stomes at tho lattom of the lak. Structures still mare nearly resembling the Irish ${ }^{\prime}$. have leen fomm in the lakes of lakwyl, Nasshammen, and Wawyl.

Mistary and tradition are alike silnot as to the price-midings of the swiss lakes. That they lochore to a remote age, will rearily lie grantel, even by those who may hesitate to accept the stme, loronze, and irom periods' on which the swiss antiguary rests their clams to 'pre-listoric' antiguity; or whon may flestion the grounts on which the hwiss naturalist assigns them to the 15the before the Christian era Of the remains foum in them; many appear to he those of a rude people-such as spear-points, arrowheads, axes, chisels, knives, ami even small saws. of flint and stone: arrow-heads, daggers, hammers, boukins, needles, pins, rings, bracelets, necklaces, of hone or horn, Articles if honze, sume of them riehly ornamented, are at the same time of ermmon ocenrence; and swords and other objects of irom are met with in consilerable numbers. home of the Swiss areheologists seem at one time to have thought that the piles surrounded ly stone and lwo impdements shewed marks of greatur are than the piles surrombed by loronze implements. It is now admitted, lowever, that botls stme and hronze oljects, and bronze and iron objects, are to be fomm in the same group of piles. It is to he romarked, too, that many of the objects of stone, lone. hom, bronze, and iron, are fashioned of the same shape, and for the same use, dithering only in the substance of which they are made. Whoever the dwalers on the pfohlbaten were, their remans shew that they grew wheat and larley; that they ate the ilesh of the ox, the gont, the sheel, and the pigg; that anmog the heasts of the chase which they huntel down was the now extinet sluecies of the aurnchs (see Bison) ; that they lial lunses, logs, and cats; that they had aples, pears, wild-phoms, anl wombraspberries; that they baked puttery; that their women plied the distaff and kuittel; that they made hemuen mats; and that they wove linen cloths.

Hitherto, archeornists lnew of lake-lwellings as existing only in Ireland aml Switzoland; lut in 1857. Mr Joseph liblertson real a paper to the sucicty of Seottish Autiquaries, prowing that they were to be foum in almost every powince of seathand, He not only ascertained the existence of ahout 50 exumples, lint was able to shew from recoms that they were known in Seotlam ly the same mane of C: which they received in lreland. The rescmblance between the Scottish and Irish types secms. indech, to be complete. Every variety of structure observed

chiefly intended to fix them to the spot. Shany of them are much cultivated in green-hmast, more on accome rif their grotesgue forms than for the leanty of thair tlowers. Some are refrigerant, and one or two are even used as food; others, on account of the tamnin which they contain, are astringent; and some are acril.

CRA'SSUS, the surname of several old Roman fanulies, amonewheh that of the Licinii was must remarkable-Crasses (Luctrs Licimus), born in $140 \mathrm{~B} . \mathrm{c}$., was the hest orator of his are, and was as distinguishel for his wit as fur his rectitude in the capacity of proconsul. In 95 b.c. he was elected comsul, atmes with Quintra Mucius Scavola (who lad been his collanue in all his previons affices). During thein consulblip was enacted the Lex Licinia Muciu de Civilus requmdis, banishing from Fiome all who hind put the full richts of citizeus. This imbitterel the foelings of foreigners toward Rome, anil partly led to the Sucial Wiar: As censor, C., in ol B. C., closed all the schonts of the rhetris-assert. ing that they had exer ised a bad influence on the uinds of youmr men. In consequence of the excitement attenting a deloate in the semate, $C$. died in 91 e.c.
CRAsSUS, Marecs Lichides, the trinmvir, was lurn sometime before 110 e.c. His father and hrother sufferel death from the party of Marins, 51 e. C., and he himself-though young-was subjucted to a jualous and dangerous survellance. In S.i b. c., to eserpe from this, he went to Spain. He afterwarts joined Sulla ( 83 B B. .), and distinguished himself in the battle against the Samnites at the gates of lioms. Is prator he crushed the Servile revelt, by the conquest of Spartacns at the battle of Luenia ( 7 b, e.), and in the following year was made consul with Pomper, a colleague whom he lintel. (In the other hani, Ciesar valued the friemlship of $C$, the most wealthy of lioman citizens. During his consulate, ( ${ }^{(1}$, gave a feast to the people, which was sprearl on 14,000 tables, and distributed a provision of com for three months. Plutareh estimates the wealth of C . as more than 7000 talents, and llimy states that the lamls of C . were worth 8000 talents. Alout 60 3. C., Ciesar, Pompey, and ('. enterel into a private arrangement for their common benefit. This paction is known as the first triumatrote. See Cesar. In 57 B. c., as consul with Pompey, he gaind the province of Syria, and profussed to make preparations of war against the Parthians: lut the acquisition of more wealth seens to have heen his main object, and this be effected by phomering the towns and temples in Syria. At lenith, lowever, he set ont, hat was misguided by a treacherons Arab, and nitterly defeated at the river lilecha ly the larthians. C. now retreated to the town of Carbare, intemeling to pass into Amenia; lut was beguifed into a conference with the Parthim gemmal, Surnas, and was slain at the appointel phaw of mecting. His quastor, Cascma, with for carahy, escaped into symia; but the remaning Romms were seattered and mate pisoners. on ${ }^{\text {mat }}$ to deatlo.

conld honestly call their own. In the few instaners where such jrojucts sncered, there is the kink of applanse which is given to the successful winnor in any yame of chance; and it is naturally felt that if the successful are applaudel, it is have tu condem the unsuccessfin; so that there is perhans a dangerons leniency in public minion thwarls speculaters on creit.

In a wodified shape, C . is a thing which, to all apparance, can never be alolishod. There is searcely a human being in a civilisen conntry, who does not transact a piece of eredit husiness almost crery day of his life. The workman lired by the week, and paid at its end, gives his enployer $U$. from In nday murning to Saturday evening. The sime wolkma, when getting a coat male for himsulf, eren althongh he enarged to pay realy money on delivery, gets C . from the tailor during the making. It is nocessary to cousider these things, hecanse a conve of $l$. is often so hutful to peorle of the working-classes, by fastening ruinous ollhgations on then, that some people have aroposed to abolish all $\&$ where they are roncurned, by rendering them free from all legal procedure for the reenvery of debts. The answer to this is, that althonich it is macticable to relice any class from dinations, and their legal enforcoment, it is impossilke in it trading conntry to suppress delat and crelit. It is practicable, however, so far to modify the leral remedies against debtors of the poorer class, that there may not be, as there too often is, a temptation to traders to transact a sluecial business, in luplding out tempitations to working-people to lurchase on crealit.

## CREDit, Casil. See Casi Accotit.

OREDIT, Letren of. This is the term apmied to reenunts, uswally in the form of a letter, addressed by oue party to anther, whereby the former renusts the latter to pay a sum therein specifice to the beater of the leter, or some other thise party named in it, anm antherises him to remburse himself for such payment. cither loy deliting it in acemant between the parties, or drawing on the first party for the ammont This arramement may take place lnetween on relants of others, hat in mancral it occurs butwean lumkers residing in Mifferent $\mathrm{p}^{\text {haces - as, fur cxample, hetween a lanker }}$ in Elinlurgh and his correspuldent in 1 ondou; and it is dusigned for crabling a party who has nomey longen at either place to ulan the mse if it at the other, without the rifle ar trombe of actually carrying it between the tho cities. Sume bankers, laving an extensive correspondenee abroul, issue what are called Circular Nots. usually of the ralue of $£ 10$ or $£ 20$ each, which any of the granter's correspondents, or indeed any wae else, may eash to the holder, on his "intorsation;" but a third farty must take lis risk of its leing questioned. For this kind of eredit, the receiver at once reimburses the granter; whereas for the ordinary letter of C., he is only reimbursed when the drafts under it are anvised to him, the holder continuing durins the interval to raise interest on his moncy deposited for covering it. The circularnote plan was derised about 1770 by Mr Herries, the fommer of the eminent Lomen hanking honse of Horries, Farquhar, and Company, who had originally been a continental merchant, and well knew the difficultics which travellers or traders then had to encounter in forcign countries. Although the system is now highly apreciated, it eost him no little trouble and perseverance to establish it in publie estination, See Cimcular Notes.
CLEDIT FONCIER, a peculiar method of borrowing money in France on the security of lauded property. It was established by an edict of 2Sth February 1852. Its peculiarity is, that the repayment of the loan is loy an annuity terminable at a certain date; the date and the amount of annuity being so ealculated, that when the last prament is made, the loan and the interest on it will be extinguished. Another method of deseribing it is as a loan repayable by instalments. The transaction is precisely regulated by the elict, which prohibits an advance on more than a half of the value of the property pledged or hypothecated. Three several compranies have been established hy the French grovernment, with the prisilege and function of making such advances.

CREDITON, or FITKTON, a borough in the mindle of Devonshire, on the Creedy, a tributary of the Exe, 8 miles north-west of Exeter. It lies in a narmo vale letween two steep, hills. Pop. 3934. At C. was bon the Anglo-Nanon Winfred, or St Boniface, who was the first to preach Christiauity in Central lermany, founded the monastery of Fulda, and was Arelibishoz of Mentz. C. was the seat of a lishoprie from 909 to 1050 , when the sees if leron and C'ornvall were united and placed at Exeter. The chief manufactures were formerly woollens and serges, but now shoes. C. was much injured by dires in 1043 and 1769.

Corresponding to this view, we fimt that the creeds of Christendom Lrow in cmaplexity, $n$ elaborate analysis and inventivenss of ductrimal statement, as they sument onm amothor. 'Thes first are companatively lnint and simple in sultse and form ; the last are wolix and lararely dalatia. F'van the Apostles' Creed to the ifurees of the Conneal of Trent, or the chaperes of the IV'estainstere "onfession of lathe thore is it willo change, luring which the Christian embeionsmess has grown from a childike faith to a critical eqmionativeness.
What has been callest the Apoutles' Cread is thas earliest form of "Inristian creed that exists, moless we give the precedenee to the laptismal fommala at the close of St Mathew's Gospel, ont of which many supprose the Apostles' Creed to have grown. There were in the early clureh diftering fomms of this primitive ereed: that which is receiveal and repeated in the service of the Chureh of England, his comue to us throuth the latin Clureli: and in several of its chases, is, for iustance, ' lle descenderl, into hell,' anel again, 'The commanion of saints,' is supposed to have been interpolated acenmling wo $^{\prime}$ later notions. A great varicty of opminns has been held as to the origin of this crect. "llhe limman Catholic Church his not only attributed it tu the apostles directly, but prufesses to settle, on the anthority of a sprorious semmon if st Angustine, the elanses respectively contributed by the several apostles: 'Petras dixit, Crelo in Denm Datrem ommipotentem. Jommes dixit, "reatorem coli it terre. Jacobus dixit,' \&e. The ealuest aceonmet of its origin we have from linimus, a listorical compider and traditionalist of the 4 th efntions Lis statement is, that the apostles, when alunt tor separate to preach the truth to difterent mations: agreed upon it 'furm of somme worts' which should express the sum of their common berching. "Whacn met tugether, and hillul with the floly cilust, they composed this compend sif what they were to prearll, eikela one motributines his slowe to the ome comporition, which thes resulyer to wive as a 1 mles of faith to those who shmuln beliese. Non great weight bolonas en this testimony; lintimn is 1 no historieal anthority. It is not impmonalile in itscht, however, that even in the are of the aposthes some formula of belief existerl. The exact form of the present eresd camot pactemal to be so amerient loy Four humdead years, but a Enpm not much difliment from it was in use loms before. Irenams, the sehntar of Polycarl, the aisciple of St. Tuln, when he repeats a erecd not muel molike to the present, assures us that "the chureh elispersod thromphont tho whole world houl received this faith from the apouthes and their discimbes;' and Tertullian alsa allimes that a similar creed haw been "Hevalent as a ralo of fath in the church from the herimnimg of the rospel.' The same thing is proved hy tho proeds ammanistered
 conturies. They correspon. with slinht variations, to the Apostles' Creal. The trme viow of this formula of elureh lonlicf, the wefore, senems to be thant which remards it as the Foman or Catin form of the creat which prevailen in all the arly churches. It is nont strictly anostolic- enrtaing not in the ormar of words derived through the Latia ('lomele, in Which it is now racciverl and repeatel; but it is sulostantially apostolic-finily repusentative of tho wifforent dements of Christime fathe as lamberl doma from the apostles, and well daming thepefore, the credence of the universnl Christian churd Since the Fefomation in Englami, it has luen the

 furnohly upto the chalk; it is, howerer, buse than
probable that a number of licals may get be discoveren to fill nt, the gap which aprarently here exists in the seduence of the rocks.

The C. ( 4 , covers a large extent of surface in Europe and the cast of Asia: beds of the perioud have also been noticel in North and sonth America, The typical strata oceur in the south-east of England, and are commecterl with similar heds in the noith of France aml Gromany, and in lemmark. Indeed, the bed of the German Geean seems to be composed of rocks of this group, as is evideuced by the masses of chalk and fint thrown on the shores of Scotland after stomes.

The stratit of the group have been arranged in the folmwing oriter, flhe maximum thickness of the divisiuns is given in teet.

1. The Inestricht beds ( 1.8 . consist of pisolitic limestones in the north of France, and of loose yellowish sundstones in llobland, a. The chalk with lints is a creat mass of pure white putverulent limestome, nsually too suft for a luildinc-stone, but sometimes phasing into a more solid state It oeeurs in beds of great thickuess, with the stratifieation often olsenme, except when rendered distinct by interstratified layers of thint a few inehes in thickness, "cuasionally in continuous beds, but oftener in nokhles, and recumbin at intervals from two to four feet distant from each other." Iron lyrites is fomud frequently in these leds in rubinted nodnles; it realily decompmses, and mortuees rusty stams on the ruck. 3. ('halk withont ilnets; this differs from the mulec chalk only in the want of limes. 4. Chalk Marl; the white chalk, ly the gradual abmixture of argilbceons matter, luennes hardened, matil it passes into a pale buffecolonred marl or argilaceons limestome, sometimes of sutheient comjuatness to be usal as a limidinerstone. 5. Upper Greensimed (see Griemsinsu), compused of altermating layer's of sanis, clays, and linestones, ocensionally, lmt mot always, coloured with green particles of a chlaritic mincral. 6. Ganlt ( 1 . v.) , a stiff dark Clay, naed for hricknakinu, with many beantifully preserved shells. T. Jower (imeensabil (q, v), so liku potralogically to the [p]re Greensand, that whan the intervening (ault is absent, it is impos. sible to sermato them. axelet ley their organic eontunts. "The :'froctom ('lay, in local Yorkshire bed of dark elay, is of the same as. S. Wealden (r. v.), divided intor the two wrompe, the Weaden clay and llastimes samb, comsists of at arat series of shates and sambstones, with reattered lowl of lime and inomstone,

Clilimisce is a game with cards, played by two, three, or four persons, the whule fack being usei. When three are engaged, each plays for himself; when foru, they take sides. The value of the cards is the same ats at whist; but there are no trumps. The umber of cards dealt is usually five ar six, the mode of playing the gane varying slightly with the number of eards used. The points are sectred on a board with holes for pegs, and 61 constitutes game. The tems used in the game are as follow: trib, the carls laid out by each party, the points made liy them being seored loy the dealer. Pairs are two similar cards, as two aces or two kings; they reckon fur two foints, whether in hand or playing. Pairs romel are three similar cards, and reckin sin points. Double pairs royal are fom similar cards, ant reckon twelve points. These various pints are thms made: if your adversary phays a soren, and you another, a pair is made, which entitles you to two points; if he then play a third soven, be makes a pair royal, and marks six; and if you phay a fourth seven, it constitutes a clouble pair reyal, and entitles you to twelve points. Fiftecns-If any combination, whether of two mere eards. in your hand, or in play, make together fifteen, such as a ten and a five, it two, a five, anl an cight, \&e, you reckon two points. Siquences are three, form, or more snecessive cards, and reckon for an cqual mumber of points; and in phaying a sequence, it is of no consequence which carl is played first; for instance, if your alversary plays an ace, and you a five, he a three, you a tro, and he a fomp, he scores live for the sequence. Fhush is when the caris are all of one suit, and reckons for as many points as there are cards. A knave of the same suit as the turn-up card comots for one in any hand. If a knave be turned up, it eounts two for the dealer. For full lirections for blaying the game, see Chumbers's Informution for the People, article 'Indorr Amuse. ments.'
Cliderisitinct is a hal habit met with espe. cially in the lighter lreeds of horses, and thoso spomints a consideralite amont of leisure in the stable. The act consists in the animal seizing with his teeth the mangrer, rack or any other such object, mol takins in at the same time a dep inspiration, technically calles winesacking. $\quad$ : springs often from bile phay, may $l_{n}$ first indulged in during gramines, especially if the operation is condncted in the stall, ami the anmal lo mederssly teased or tickled; is oneasimently lamed, aprently, by imitation from a mighanif: and in the first instanco is frempently a symptum of shane form of indigestion. ## -RICHTON-CROCKEIT

Tobert Crichton of Flionck, in tho anmety of l'ath,
 On the mother's side, (t. Was duscounled from the old Scottish kings, a circumst:un"e of which hre nsoll to boast on the continent. If: was elumatol at St Andrews University birfur he roachal his 20thyour, lue hat, it scims, 'rum thanarh the whul circle of the sciencus. masturea tom diflomat languages, and perfertad himath in efory kinifhtly acemmplishmont. 'Thut panombion in a suit of
 lettros, and challongod atl anm sumbly to a learmond
 stripling lefterery alversary who entreal the lists against him kons che romphe. At l'avis, Jonne, Venice, limena, Mimtua, he achieved the most extraordinary victories in dispatation on all hramebes of human knowlerlen, and excited nuiversal anazement and applane. The beanty of his person and the degance of his maners also made him a great favonite with the fair ; while, as if to leave no excellence mattaned, he ranguished, in a lucl, the unost famous glabliato in Lurope. The lonke of Mantua, in whose city this perituns feat was performed, appointed hinn precepitor to his son, Vincentio al Gonzars, a dissolute amb prolligate youth. Onc night, lorines the carmival, $C$. Wis attinked in the streets of Mantua by half-a-dozen people in masks. He pushed them so hard that then leader pulleal old his mask, and disclosed the features of the prince. With an excess of loyalty which proved his death, C. threw himself mon his knees, aml begred Vincentio's pardon, at the same time presenting him with his sworl. The heartless wretch plinged it into the body of his tutor. Thus perisherl, in the 20, y year of his arse, the 'Almirable crichton.'

What ueasure of truth there may be in the hyberbolical entogies of his hographers, it is impossible to determine, as O. left no writings by which they might have been julged.

CRI'CLET (of (loubtful derivation), a well-known game, is of very ancient date. The anthur of the Cricket Fickl-one of the best manuals on the suliject -belieres it to be idnatical with 'Club-lali,' a game played in the 14 the e. it went originally ly the name of handyn and homdonte.' $C$. is a truly national English same. There is hardly a town, village, or schook, that does not own its C. gromad, and military authorities hold it in such estimation as a healthy recreation, that solliers are encouraged to occupy their leisure time in its fursuit. Of late years, U. has becn introducel largely into Scotland and hreland, and is rapidly hewming naturalised all over the work. Whe requirments for carryiug on the game are-1st, a piece of level tirf an acre or two in extent; al, a sulticient number of players to form two sides of eleven eacli, for aluble wicket, and a lesser momber for single wicket; 31 , for double wicket (the mode in which the game is nusally played), two bats, two sets of wiclsets and hails, and a ball. When a match is to be played between two "clevens,' the first thing to be done is to 'pitch" the wickets. Wickets consist of six wooden stumps, 27 inches high, and are placed in the ground in sets of three, at a listance of 2,2 yards apart. On the top of each set of stomps are placed two small pieces of wood, ealled betils. 'lhe rival sides next toss for lirst 'immings, aud the director of the side that is to go in lirst, places two of his men at the wickets as batters; whike a bowler, wickot-kecper, Ion'r stop, and ticlders (see accompanymg illustration), are placed in their several pasitions ly the director of the opmosite sirle. When these armagements are satisfactorily male, and the markers or scorers are at their post, the umpires take their places, and the game begins. It
may be will lo montion laro that dhe mative merits of aral siles are decided ly the tortal humber

Plan of Crickut-ficla, shewing bositions of farties engrged at double wichet:
Names of partios indeeatel by the figurs: ", Latter*; 1, Hower; 2, Wekt-becter; 3, Iong shar; 4, Nont-wip; 5,

 $t \rightarrow$ Sconers. This is the untal phacing wi the fiede-mem, bat bowlers make sucla alterations as they deem best to offose the Uistters.
of rums made by cach cleven latters duriag two inning-the side whose players score the most heing, of comse, victorious.

We may furthor promise that the bowher's oljoet is to direct his ball, hy a swift mosemont of the imm, towards the oprosite wickets, at which one of the batsmen stands, anl, if pussilile, to strile down the stumps or lanock all the bails; while the object il the hatsman, on the other hand, is to protect his wiekets from the lowler's attack, lig either sturming the ball when it reaches him (mpekiner), or hriving it unt to the died. And much of the beauty of the game depends upun the precision with which the bowler can direct hall after liall in a strairht line for the wickets, amd the curresponding skill elisplayed loy a good batsman in garding them.

We will now suppose the two batanon to be at their places, the bowler at his, ball in haml, and the other players arranged in theirs: at asmal from the umpire the lomber crics "Ilay!' and inmediately after, delirers his first ball. If the hatoman misses the ball, and it passes the wicket, the wicketkeeper stops it, and returns it to the lawler, who alelivers another matl, aml so an. When the batsman strikes the ball fiddwards, he immediately runs to the opposite wiclset, passing his companion batsman, who crosses to his, aml so on, till the ball has heen retumed by a fielder to the wicket-kecper or bowler's hand. Thus, if the atrolie lo a lung whe the striker may have time ta ran prehaps three times lnetween the wickets bufur. the ball is thrown up, when three 'runs' are andmendy placed at his name ly the scorers, on their slicet. If, howevor, the bowter or wicket-kener rewers the ball, wat twaches the wickets with it, luene the alvancinif latsman has reached his 'grommd' or towdies it with lis bat, the striker is ont, and annther man takes his wace Besides, if a hall from in stroke wif the bat be canght hy some of the oprosite party before it reathes the gromme; or 10 in striling at a hall the striker luts dunn his wicket: or if he wilfully prevents at hall heinis anglit, or strikes it twice: or if any bat of his pran stops a ball which would otherwise have hit his wicket, the striker is out. It irequently happens that two skilful batsmen guard their wickets so effectually. and score so maty runs, to one particular style of

## MRIKET-CRIEFF.

bowling that a change either of the bevler, or style of howinis, is aloptext by the other side. This change, siay from swift to slow luwling, or vien emot, renerally produces the repuired results, and leads to the speedy retirement of the hithertu fortanate batsmona.
'Thu' weket-kerpers place is a very imprortant one, his mincipal duty luinuto stop with his hands creyy bill the lontsman misses, it heing allowable to make rums (byes) for halls that ulute his grasp. behimel him stands the lome stop, who is always on the ruthook for balls that escape the wicket-kecper. 'Ihe thelders, who are pustod in varions pasts of the grount, ought to possess quickness of eve and font, and skill in plicking nu with eithen ham a hall that is ronning, and instantly throwing it to the wickets. They must also lie well skillmi in cateleing halls. Much depends on their judoment of distance between the print at whilh the lall is pickerl np, anol the wiekets, an misemeeption of this may leal to arerthomin! the ball, ar throwins it short, while the latsmen are probiting ly the (rour, and scoring adilitional rums. Fiedurs usually throw the ball to the wicket-koejwe, whureturs it slowly to the buwlor; this saves the liands of the lather from heinis mastealied by catehins lome halls,

At the end of every fon bowls, the how ler, weleetkeencr, lons-stop, and tiehlers, change places, and thons evory fom lealls are delivared from alternate wickts: fomr halls constitute an "over,' Wheln it is the mopires duty to reekon and ammomere.

We lave sail that each side is allumed tem inninss, but it sometmes haplens that one shlu seores more runs in one imings than the nther loes in two: thas, A's side, we will suppose, ghes in first, ame it: cleven men score 180 ; $L$ L's sule then gotes in, and seones, say, so the first immos, aml To the maxt: in that case, A would be said to lare won by an inniners and 30 10ms.

In 'Ensland, there are many pofessimal men who make a livelinnod by playine matelne with amatem clats, ami hy imetrictmis the latter in the art. CIRI＇NAN CANAL，THE，is an artificial water． commmieation 9 miles long，in the west of Arçyle－ shire，between Loch Gilp，i liranch of Loch Fyne， and Loch（＇rinam，in the sound of Juna，at the head of the penimsala of Cantire．It was constructed to avoint the cireuitons passage of 70 miles roumd the Mull of cantire，om the ronte from Glasgow to Inverness ly the Cajedonian c＇anal．It is of fret liond，and I＇rleel，has I＇locks，and admits vessels of 200 toms．It was excavated in the cud of last century，ancl cost $\pm 183,900$ ．After a contimance of heary rain in Felnuary 1859，the three reservoirs supplying the canal with water（the highest being Soo fect above the canal）burst，and a torrent of water rushed down the momutain－slope，wasled away part of the canal lanks，and filled the canal with deblen and stomes for mpwards of a mile．Government repained the damage at the cost of $£ 12,000$ ．In the year unding pmil IS5！， 1606 vessels passent through the canal，and the income was £a？3S，and the expenclitare む゚ンl 19.

CRINED（Lat．crinis，the hair），a term in Terakdry．When the hair of a man or woman，or the mane of a horse，differs in tincture from the rest of the clarge，the object is said to be crined， of smel a metal or colour．

Cil＇NGLES，short picces of rope，with each end spliced into the bolt rupe of a sail：commonly con－ tinumg an iron or brass ring or thimble．Smaller rupes are passed through them，to aid in managing the sails．

CRINOI＇DEA（Gr．lily－lilic），an order or family of radiate animals of the class Echinodermata（q．v．）， of which the recent species are few，but the fossil species so very ummerons as to constitute great tracts of the dry land as it now appears．The C． have a central dise，in which is contained the disestive cavity，with two orifices，and from which arise ams or rays，live in number，but soon sub－ dividine su as at first sight to aprear more mumer－ ons，ind arain sumbiviblig into lateral appendages， rither fim－like or flamentons，the diso as well as the ratys and then sublivisions formed of a calcareous jointerl skeletom．clother with a fleshy integnment， of which the fim－like expansions are formed，and which is thicker than in star－tishes，and contains imbedies in it the immmeralle ovaries．The joints are also extremuly numerons，and the suldivision of the rays often very grent．The ctise is eomposed of calcareons pieces and Aloshy integmment like the rays，as is also a stalk on which the whole is usually supported；the base，it is subprosed，Jeing fixed，and the dise and rays expmoling like a flower．It apmans probialle that many of the fossil $C$ ．wero prommently fixed in this mammer，and this is sup－ posed to ho the case with the species of Pentacrinus still existimg，as the $I$ ．corput Medusce or Medasa＇s Head of the Wist lndian sass；but others are fixed only when youme，thedise and arms finally becoming bletachend from the stalla and movimer frecty in the
sea, swimming in a manner analegens to that of the meduse. This interesting fact was lirst discovered by Mr J. V. 'lhompson, who found in the scat nein'

Linerinus.
Cork the stillied young of the Comutule rosacion, a small but very beatifal species, and the only species of the C . found in the British seas. see Encrinites.

CRI'NOLINE (Fr., from Lat. crinis, hair) was the name originally given ly the French modistes to a fabric male of horse has, capalle of great stiffness, and employed to distend women's attire: it is now applied in a general way to those struc. tures of steel wire or hoops, ly means of which women have recently attained such overwhelming dimensions. This fashion of expansion is not new. The first nane we furl given to it is the furdingule. introduced by Queen Elizabeth. Walpule, in his

Ladics in time of Queen Elizabeth, shewing how the Fardingale was worn.
fancy description of her, speaks of her 'enormons rulf and vaster fardingale.' The upper part of the body was eneased in a cuirass of whalebme, which was united at the waist with the ecqually stiff fardingale of the same material, descending to the feet, without a single fold, in the form of a great bell, Gosson mentions the fardingale in 1500 , in his Pleasant Quippes jor Upstart Vewfangled Gentle. women. In the end of the reign of James I., this fashion gradually declined, and was further tamed down by l'uritan feeling in the time of Charles L .
and (rmment, till it quite disappeared. We next hear of it in 1711 as "that startlins novelty the hoop petticoat,' which difioted from the fardingalo in lremeg gathereal at the waist. Siv Ruger de Covertey is make to say of his fanily pictures:

 is gatherd at the waist; my gramhother appars ass if she stow in a large ilrun, wherets the landes now walk as if they were in a mo-cate' The "Tame drum was the old farchingale, ant 'the newfashoned petticoat' was the mure mondern homp, over which, in stir Romer's timm, the Aress was locped up romod the borly in front, and fell in loose folds inhinel. Dogarth, in his might-secme ins ' Marriage a-la-Mode,' introduces on the thoor a hen? of the time of George 11. ; and ahout 17 4 , hwol's are mentional as so extravagant, that a wonan oecupical the space of six men. An clongated, asal furm also tane into fashion,
 raisel at waeh side to show the high-hecled shoes, causing caricaturists to say that a lady lowked like a donkey carrying its paniers. Facetions proposals were also made that coaches shombl have movalle roofs, tho ladies to he dropsed in frum the top by means of frames and pulleys. These hoops were of whalebone, with canvas over them, having capaciuns reeptaches on each side for articles of convenience. In 1750, we find hoots of cane usel, being advertised to 'outwear the best sort of whalebone.' Abont the year 1706, hons had been discarded in private life, wut were still the mode at cont, and never liad ben seen in more full-hlown enormity, contimuing so tin the time of George IV., when they were abohshed by royal comuand.

We now come to the recent development of this fashion in our own day, which lergu with C. in its original and poner sense, first in the form of the melugant 'bustle' in the upper part of the skirt, then the whole petticoat. Instual of the hair fabric, some used, for economy, cotton, thickly corded and starched. At longth, alout 1856, people were startled by the question: 'have you heard that Miss so-aud-so actnally wears a hoop?' and it became ap'parent that the fashion of Queen Anae's time hal returned umon us, only that the stracture was somewhat lighter and more phant ; leing usually composerl of a suries of horizontal small steel hoons, held together cither by vertical hands, or ly being sewed intu a kind of petticoat. Unlike former times of homs and fardingales, the fashion hats desconded eren to mait. servants, so that where the dining-romn is small, tahle-maids lave been koown to give wammy, because they conhinut clear the space between the table and the fire; and the newspapers are, eontimally amonemar 'Accident from Crinuline,' or 'Lady bumed to Death from Crinoline.' Nay, the newspapers from time to time infurm us of such aecidents as these: 'A puldican's wife, passing through the cellar, unconsciously drew a stop-cock open with her crimblined dress, and spilt 14 gallons of the lest lslay whisky;' or, more disastrons by far: 'A mill-girl was canght up in the machinery by her 'rinoline, am immediately killed.' The did-fashimed hoon had this advantage, that it duscended as low as the dress; whereas the present hoop, stops short of the skirt, and is discovered by its inelegant 'swarging' from side to side, as the wearer walks alons. The spectutor dealt ont much eattin?, though playful raillery on the hoops of his day, lut apparently with little effect; and
cqually umavailing are the satires of Pumb and other caricaturists of the present time arganst the hiderus fashion of crincline. It may, without exargeration. be described as a sucial nusance. Owher to its prevalonee, church pews that formorly held seven are now let for six, and yet foel rather crowted. The hours are sometimes made with a circumference of four, anl evon five yards.

CliINUMI, a genus wf bulbous-rocted phants of the natural order Amaryllitec, having long tulnur flowers, the semments of the prianth lowked at the apex, the stanms strainht amd insertel into the tube, aul a three-cellecl capsule. It contains a consileralle momber of species, natives of thfferent tronical and sub-tropical cometries, senerally with womels of large and heantiful flowers, some of them amongst the most almired crnaments of our hot-honses. (G ambite, an Intian species. is much estecmed for its fractance as well as its beaty, and towers about four times a year. All the spectes require a rich ofne suil, phenty of rum for their routs, and the frequent rempral of suckers. - The bulls of 6 Asinticum are fowerfully emetic, and are used in some parts of the last in cases of poisoning.

## CRIS-CROSS ROW. Sce Chant-cons.

CRISIS (Gr. a judment, from krian, 1 jul, He ), a name usch lyy the ancient physicians t" denote the rajud or sudien detemination of an acnte disease in the divection of convalescence or of duath. It was andosed in signitication to lysis (l/n. I relax), which denoted the gradual subidence of the symptoms noticol in most ehronic, and in some acute diseases. The doctrine of crises was clusely bomel up with that of a materifs morle, or material of disease in the blow, which was presumed to be underguint changes, during the whole eourse of the maliuly, teming to an evacmation of some kind from the system in the forn of a critical lischarge (1postasis on abserss), which, when olservel, was snpposed tu contain the matter uf disease in a state uf raction, and to be the direct cunse of the suduch relicf of the pationt. Thms, aconvding to the character and seat of the critical dischatge, it was common tor speak of a C. by sweating, by diammen, by expectoration, hy wine, by protid swollimes. \&e, and m (", Wis considered regular that was mat attented hes sume symptum of this kind. Andther curions denctrine assuciated with that of erises. wats the leclief in certain days as ruliner the beneficent or injurows, the complete or incomplete, character if a arisiss 'Ihe serenth, fourtecnth, and twontieth (accoming to some, the twenty-first) days of the disease were tegardeal as eminently eritical; luss so, hat still fivumally eritical, were the thim, fifth, clewnth, and severitenth; the fourdi day was the indietom of a complete ( 6 . on the seventlo; the sixth diay was the tyrant, notorimes for mianomable erises; the seromil, righth, tonth, thirtenth, and the rest wre mon-critical. Fow physicians mow attach much impartane to critical ditys, hat the doctrime of crises and of a mothries mondi, is still tand wht, with barions mosifications, in our modical sehome and tost-howks.

and his brother suffered a most cruel mantyrdom. Both irothers are commemorated on the 25th October, King Crispin, as he is called, is the universally recognised patron saint of shomakers, and is represented with dramatie effect, in the ceremonial processions of the 'gentle cralt.' There is an amosing but scarce book about shomakers, entitled Crivim Anedutes.

## CRITHMUM. See Simphire.

CROATLA, a kinglom forming part of the Austrim Empire. With Fimme and the Croatian Litorole or Maritime District, and the Croatian Hilitary Border, it has an area of about 4000 square miles, and 618, 426 inlahitants. It lies to the northeast of the Alriatic, and borlurs with Turkey and Inngary. ('. is traversed by low chains of mour. tains, in the senth proceding from the Julian $\mathrm{Al}_{\mathrm{p}} \mathrm{s}$, and in the north from the Carnic $A_{p s}$. These momintains are generally covered with forests, and the chains are separated by very fortile valleys. The frincipal sivers are the save and its athuent the ('ulpra, the lirave amt its aflluent the Mur. Nome of the valleys, ceprecially in the south, aro guite shat in, so that many of the streams have to make their way through sulterranean channels. The climate much resembles that of the neighbouring parts of IImgary, the more southern situation luing counternalaneed by the greater clevation. The inhahitants are mostly of slavonic race ame language. The religion of C C. is that of the Roman and Cicek Churches. The Croatians are warlike, Int the mame croots is employed to designate light-cavalry regiments in the imperial army, in whicla Magars and others are mingled with true Groatians. Grain, chestmuts, wine, and gall-muts are amongst the principal exports of Croatia. The keeping of cattle is neglected. The woul of the sreat forests, although mueh of it is almirahly adapted for shiphoilling, is thrned as vet to little accomat. The Litorale or coast district contains valuable marhe guarrics. The capital of $C$ is Agram (I. v.). C. with its Litorale and Slaronia (q. v.) form a crown-lam, at the heal of the mumintration of which is the Ban (f, $\because$ ) of Croatia.
('. was in the earliest historic times. inhabited by the l'annomians, who were conguered by the Romans under Augnstus, and the comentry made a province uf Illyria. During the irmptions of the northern nations into the loman empire, C. suffered a variety of vieissitudes. In 640, the C'roats, Clrovats, or Horsats, migrated into it from the Carpathian Momutains, nul gave it its present name. In the 1 Ith c., having previously liech in some measure incorborated with IIngary, $C^{\prime}$. was more comphetcly mited with that kinglom, and passent with it, in the begiming of the 1 Gith e., to the Anstrian Honse of IAaphars. 1 h the eme of the lith e., the 'Turks compured" a portion of it, now known ats Purkish 'ravtia. The city of Fiume was dedared in 17:7 taln a constitame and integral prat of the kingem of Hongary: and after the fomination of the fremeh wars. Finme remained united to Hanary till isis. The croatians lomg ontertamel a forlue of hostility the Mayars. ('rocodiles uften bury themselves in the mud in droughts, and so abide till rain falls.-The names C. and Alligator are often indiscriminately used in popular language.
CROCUS, a genus of plants of the natural order midacer. The species have much general similarity, and are natives chietly of the sonth of Ehrope and of the East. Several have been described as British. but are rather naturalised than native. Saftion (q. Y.) is the produce of ( 6 satims. Some of the species are much cultivated in gariens for the beanty of their flowers, particularly those which, as 6. wemus and C. luteus, flower very early in spring. The safiron C. and some other species thower in antumn. The dlowers of one or two species are fragrant. It is necessary frequently to takio u C ronts and plant anew, on accomit of the manner in which the corms multiply. See Corm.

CROCUS OF ANTIMONY is the oxysulphide of Antimony ( 1.5 . ).

CROCUS OF MARS is the fimely divided red oxide of iron.

CREESUS, the last king of Lydia, suceceded his father, Alyattes, in 500 r. C. He made the tireeks of Asia Minor his tributaries. and extembel his kingdom castwari to the Halys. From his conquests, his mines, and the golden sand of the Tace tolus, he accomulatel so much treasure, that his woalth has lecome proverhial. Ife gave himself up to a life of pleasure and sumptrous extravagance, anl is said to have deemed himself the lapquest man in the work, and to have heen displeasel when Sillom, on a visit to his court, toll him that no man shmult he callenl haply till his death. He soon found how uncertain was a hapiness such as his; for his helowed som Atys was liilled while homings. and there was left to him mly one son, who was dumb; and having engaged in war with Cymas, he was totally defeatel, his kingilnm condrocel, and himself made prisoner, and compemed to be bunt (546). At the funeral 1 yre, his repeated exclamation of ' 0 Silon!' Arew in him the attention of the compuerer, and the reason of it heing known, his life was sparel. and he was trated with great kindness. Cyrus gave him for a residmee the city of Barene, noar Eechatana, and is sail to have emsulterl him in his military undertakings, a statement which, if true, indicates that 1 . by no means laked nativ, ability. Herndotus informs us that he aceompaniel Cambyses, the son of Cyrus, to Weght, and while there, incmred great danger ly the lmbincss with which he enntemned, on one ocrasion, the crinel combuct of the lersian king. The time of his death is manown.

CROFI (Ang. Sax. crof $)$, a piece of land comaceted with a humble kint of dwellines, whose inhalitant, the renter of the land, is called is crofter, ami this metlond of letting small pieces of lami, vither for tillago or the rearing of cattlo, is lowown as the crofting system. This lind of petly farmine of which there were at one time many examples in Scotland, more particularly in the Wighlamds, iss row very gonerally given ap as inexpediont. Soe Ashiculatien, baim, sude-husbandro.
CRODA, (M CROJA, a town of Upper Albania, Eurneran 'lurkey, fis miles sonth-east of Scontari. It is situated on a momatain spur, rising ahont 500 frect aluwe the plain, and its strong position is defenmel liy a castle. It is the chice tenw of then Dioditw, i marly ind pembent Foman Cathnic puplo. Fop, Grou. The fammas Scametherg was foris home.
('Rolx, Spe (or sANTA (ditZ), in binglish, Holy Cross on IMolyrood, or, somewhat harharonsly,

St Cross, an island, the most southerly and extensive of the Virgin group, is the frincipal Danish possession in the West lndies. With an area of alwut 100 square miles, it contains about 25,000 imhabitants, being generally enitivated like a garden. - St C. is also the name of a river, otherwise known as the Schoodie, and also as the Passamaquoddy, which falls into Passamarmomy Bar, on the west side of the entrance of the Bay of Fundy. It is the boundary throughont between the state of Maine and the province of New Brunswick, having been so defined, from its month to its source, by the international treaty which recognised the indelendence of the Unitel States. The St C. is about 55 miles longs, its lowest 12 miles being narigable for large vessels.

CRO'KER, Jony Whsox, an English politician and lithoutcm of considerable notoricty, was born at Galway, in Freland, Decemher 20, 1780. Having heen edncated at a school in Cork, and at Trinity College, Dublin, he entered Eincoln's Inn as a lawstudent in 1800, amd was called to the Irish har two years afterwards. IVis first literary attempt was a sative on the Irish stage, which exhilited much canstic eleverness. This was in $\mathbf{1 8 0 3}$; and in 1505, he published another equally clever satire on the city of Dublin, entitled An Intercepted Letter firm Centon. Luth proluctions proved a great suceess, ruming through several editions. In 1507, he ismed a treatise on the State of Dreland, Past and Prisen', which brought him into some notice, and, in the same year, he was elected member of parliament for bismpatrick. A warm defence in parlianeent, in 1s09, of th" Duke of York, charged with cormpt aiministration at the Horse Guards, helped U. in the same year to the office of Secretary to the Acmiralty, a post which he hell for twenty years. IIe was one of the fomders of the Quarterly Revicu, and contributed many of the most violent party articles to its pages, as well as a large number of those litterly presonal and grossly abusive revicus which were wont to disfigure that perindical. As 'Righy,' allowance being matule for the satire, his character is nat bally hit olf by Disraeli, in Conimgsty, In parliament, C. steadily opposed the Reform Eill in all its stages, and its enactment ended his parliamentary career; but on all questions relative to the promotion of the fine arts, he was much alhead of the great majnrity of the Commons. He took an active iart in the establishment of the Athenecum Chut, and renlered good scrvice to literature hy his aunotated elition of Boswell's Johnson, and his publication of the Saloll: Papers, and Lord Hervey's If moire ut the Cramt of George 11. His Stories fromo the Mistomy of Empland for Childron, supplied scott with the intea of Tules of a cirandfuther. C. died August 1857.

ClROKBR. T. CROFON, a popular author and collector of Jrish stiries and legends, was horn in Cork, Jamary 15, 17as. 11e early bevoted himself to the collection of lammas and songs of the lrish peasantry'; aml, in 1 SD, he puldished his Researches in the simbth of hrtome, charanterised by a happy bomding of homour and sentiment, with archeolonical lamong. This work was followad by the Fibiry Levemels ind Trudtions of the South of Ireland (1825): Dewots of the Luikes (182S); Damel Whowkr, a sont of Hish Munchansen (IS28) ; Bamey
